Preface.....	xxvii
Authors.....	xxix

Chapter 1	Strategies for Novel Research Projects and/or Research Grant Funding.....	1
1.1	Introduction	1
	References	14

Chapter 2	Rapid Isolation of Specific cDNAs or Genes by PCR.....	17
2.1	Introduction	17
2.2	Isolation of Specific Full-Length cDNAs by RT-PCR	
	Method.....	17
2.2.1	Isolation of RNAs.....	18
2.2.2	Design and Synthesis of Specific Forward and Reverse Primers.....	18
2.2.3	Amplification of cDNA of Interest by RT-PCR	20
2.2.4	Purification of PCR Products by High-Speed Centrifugation of Agarose Gel Slices	22
2.3	Amplification and Isolation of cDNA Ends by 5'-RACE.....	23
2.4	Amplification and Isolation of cDNA Ends by 3'-RACE.....	24
2.5	Isolation of Gene of Interest by PCR.....	24
2.5.1	Isolation of Genomic DNA.....	24
2.5.2	Partial Digestion of Genomic DNA Using <i>Sau3AI</i>	26
	2.5.2.1 Optimization of Partial Digestion of Genomic DNA with <i>Sau3AI</i>	26
	2.5.2.2 Large-Scale Preparation of Partially Digested Genomic DNA.....	27
2.5.3	Design and Synthesis of Specific Forward and Reverse Primers.....	28
	2.5.3.1 Amplification and Isolation of Exon and Intron Sequences.....	28
	2.5.3.2 Amplification and Isolation of Promoter Sequence	29
2.5.4	Amplification of Specific DNA Fragments by PCR	29
2.5.5	Purification of PCR Products by Agarose Gels	30
2.6	Subcloning of cDNA or Gene of Interest	30
2.7	Characterization of PCR Products	30
	References	30

Chapter 3	Construction and Screening of Subtracted and Complete Expression cDNA Libraries	33
3.1	Introduction	33
3.2	Construction and Screening of a Subtracted cDNA Library	36
3.2.1	Isolation of Total RNAs from Cell- or Tissue-Type A and B of Interest	36
3.2.1.1	Protocol A. Rapid Isolation of Total RNA by Acid Guanidinium Thiocyanate-Phenol-Chloroform Method	38
3.2.1.2	Protocol B. Rapid Isolation of Total RNA Using Trizol Reagent™	39
3.2.1.3	Protocol C. Measurement of RNAs	40
3.2.2	Purification of mRNAs from Total RNAs	42
3.2.2.1	Protocol A. Purification of Poly(A) ⁺ RNAs Using Oligo(dT)-Cellulose Column	42
3.2.2.2	Protocol B. Minipurification of mRNAs Using Oligo(dT) Cellulose Resin	44
3.2.3	Synthesis of First Strand cDNAs from Cell/Tissue Type A or B	45
3.2.3.1	Protocol A. Synthesis of First Strand cDNAs from mRNAs	45
3.2.3.2	Protocol B. TCA Assay and Calculation of cDNA Yield	47
3.2.3.3	Protocol C. Analysis of cDNAs by Alkaline Agarose Gel Electrophoresis	47
3.2.4	Hybridization of cDNAs from Cell/Tissue Type A or B with mRNAs from Cell/Tissue Type B or A, or Vice Versa	49
3.2.5	Separation of cDNA/mRNA Hybrids from Single-Stranded cDNAs by HAP Chromatography	50
3.2.6	Synthesis of Double-Stranded cDNAs from Subtracted cDNAs	50
3.2.7	Ligation of cDNAs to Lambda gt10 or Appropriate Vectors	52
3.2.7.1	Ligation of <i>Eco</i> RI Linkers/Adapters to Double-Stranded, Blunt-End cDNAs	52
3.2.7.2	Restriction Enzyme Digestion of Vectors	56
3.2.7.3	Ligation of cDNAs to Vectors	56
3.2.8	Generation of a Subtracted cDNA Library	57
3.2.8.1	<i>In Vitro</i> Packaging	57
3.2.8.2	Titration of Packaged Phage	58

3.2.8.3	Amplification of cDNA Library (Optional).....	60
3.2.9	Isolation of Specific cDNA from the Subtracted cDNA Library	60
3.2.10	Characterization of cDNA.....	60
3.3	Construction and Screening of a Complete Expression cDNA Library.....	61
3.3.1	General Principles and Considerations of an Expression cDNA Library.....	61
3.3.2	Isolation of Total RNAs and Purification of mRNAs from Cells or Tissues of Interest.....	61
3.3.3	Synthesis of cDNAs from mRNAs	61
3.3.4	Ligation of cDNAs to λ gt11 Expression Vectors.....	61
3.3.5	Generation of an Expression cDNA Library	61
3.3.6	Screening of the Expression Library and Isolation of the cDNA of Interest	63
3.3.6.1	Method A. Immunoscreening of Expression cDNA Library Using Specific Antibodies.....	63
3.3.6.2	Method B. Screening a cDNA Library Using ^{32}P -Labeled DNA as a Probe	67
3.3.6.3	Method C. Screening a cDNA Library Using a Nonradioactive Probe	67
3.3.6.4	Method D. Isolation of λ Phage DNAs by the Liquid Method	67
3.3.7	Characterization of cDNA.....	69
	References	71

Chapter 4	Subcloning of Genes or DNA Fragments.....	73
4.1	Introduction	73
4.2	Restriction Enzyme Digestion of Vector or DNA Insert for Subcloning	73
4.2.1	Selection of Restriction Enzymes	73
4.2.2	Selection of Cloning Vectors.....	75
4.2.3	Protocols for Restriction Enzyme Digestion	76
4.3	Purification of DNA Fragments from Agarose Gels	78
4.3.1	Elution of DNA Bands by High-Speed Centrifugation of Agarose Gel Slices	78
4.3.2	Elution of DNA Fragment by Melting and Thawing of Agarose Gel Slices.....	80
4.3.3	Elution of DNA Fragment Using NA45 DEAE Membrane.....	81
4.3.4	Elution of DNA Fragments in Agarose Gel Well.....	81
4.4	Ligation of DNA Fragments	81
4.5	Single-Step Cloning by PCR	83

4.6	Transformation of Ligated DNA into Bacteria.....	85
4.6.1	Protocol 1. Preparation of Competent Cells for Transformation	85
4.6.1.1	Competent Cells for CaCl_2 Transformation before Ligation	85
4.6.1.2	Preparation of Competent Cells for Electroporation	86
4.6.2	Protocol 2. Transformation of Cells by CaCl_2 Method	86
4.6.3	Protocol 3. Transformation by Electroporation.....	87
4.7	Isolation and Purification of Plasmid DNA by Alkaline Method.....	88
4.7.1	Protocol 1. Minipreparation of Plasmid DNA	88
4.7.2	Protocol 2. Large-Scale Preparation of Plasmid DNA	91
4.7.3	Protocol 3. Purification of Plasmid DNA by CsCl Gradient.....	92
4.8	Verification of DNA Insertion by Restriction Enzyme Digestion and Agarose Gel Electrophoresis.....	94
4.9	Verification of Insertion Site by DNA Sequencing	95
	References	96

Chapter 5 Nonisotopic and Isotopic DNA or RNA Sequencing..... 97

5.1	Introduction	97
5.2	Nonisotopic DNA Sequencing Method.....	99
5.2.1	Protocol 1. Preparation of DNA Templates for Sequencing	99
5.2.1.1	Purification of Double-Stranded Plasmid DNA Using the Alkaline Method.....	99
5.2.1.2	Purification of ssDNA.....	102
5.2.2	Protocol 2. Sequencing Reactions.....	103
5.2.2.1	Method A. Sequencing Reactions for Double-Stranded Plasmid DNA	103
5.2.2.2	Method B. Sequencing Reactions for ssDNA.....	107
5.2.3	Protocol 3. Preparation of Sequencing Gels.....	108
5.2.3.1	Method A. Pouring the Gel Mixture Horizontally into the Sandwich	109
5.2.3.2	Method B. Pouring the Gel at an Angle ...	110
5.2.4	Protocol 4. Electrophoresis	112
5.2.5	Protocol 5. Transferring of DNA from Gel onto a Nylon Membrane	114
5.2.6	Protocol 6. Detection.....	115

5.2.6.1	Method A. Chemiluminescent Detection.....	115
5.2.6.2	Method B. Colorimetric Detection.....	116
5.3	Isotopic DNA Sequencing Method.....	117
5.4	Use of Formamide Gels.....	119
5.5	Extending Sequencing Far from the Primers.....	120
5.6	DNA Sequencing by Primer Walking.....	120
5.7	DNA Sequencing by Unidirectional Deletions.....	120
5.7.1	Protocol 1. Performing a Series of Deletions of the Linearized DNA with Exonuclease III and Recircularization of DNA with T4 DNA Ligase.....	122
5.8	Direct DNA Sequencing by PCR.....	124
5.9	RNA Sequencing.....	127
5.9.1	Protocol 1. Annealing of Primer and RNA Template.....	127
5.9.2	Protocol 2. Labeling Reactions.....	127
5.9.3	Protocol 3. Termination Reaction.....	128
	References.....	132

Chapter 6	Bioinformation Superhighway and Computer Databases of Nucleic Acids and Proteins.....	133
6.1	Introduction.....	133
6.2	Communication with GenBank via the Internet.....	133
6.2.1	Submission of a Sequence to GenBank.....	133
6.2.2	Sequence Similarity Searching Using BLAST Programs.....	135
6.2.2.1	BLASTN.....	135
6.2.2.2	BLASTX.....	138
6.2.2.3	BLASTP.....	139
6.3	Computer Analysis of DNA Sequences by the GCG Program.....	140
6.3.1	Entry and Editing of a Sequence Using the GCG Program.....	140
6.3.1.1	Sequence Entry.....	140
6.3.1.2	Sequence Editing or Modification.....	142
6.3.1.3	Review of Sequence Output.....	142
6.3.2	Combination or Assembly of Multiple Fragments into a Single Sequence.....	142
6.3.2.1	Generating a New Project File Using the GelStart Program.....	142
6.3.2.2	Enter Sequences to Be Assembled into the Project File Generated in the Previous Section (e.g., FRAGMENT) Using the GelEnter Program.....	143

6.3.2.3	Compare and Identify Overlap Points of the Entered Fragments Using the GelMerge or GelOverlap Program	144
6.3.2.4	Assembly and Review of the Combined Sequence Using the GelAssemble Program	145
6.3.3	Identification of Restriction Enzyme Digestion Sites, Fragment Sizes, and Potential Protein Translations of a DNA Sequence	145
6.3.3.1	Exhibition of Restriction Enzymes above Both Strands of a DNA Sequence and Possible Protein Translation below the Sequence Using the Map Program	146
6.3.3.2	Identification of Specific Restriction Enzyme Cutting Sites and Sizes of Fragments Using MapSort Program	147
6.3.4	Comparison of Similarity between Two Sequences	148
6.3.5	Translation of Nucleic Acid Sequences into Amino Acid Sequences or from an Amino Acid Sequence into a Nucleic Acid Sequence	150
6.3.5.1	Translate	150
6.3.5.2	BackTranslate	150
6.3.6	Identification of Enzyme Digestion Sites within a Peptide or Protein	151
6.3.7	Obtaining Nucleotide and Amino Acid Sequences from GenBank	152
	References	153

Chapter 7	Characterization of DNA or Genes by Southern Blot Hybridization	155
7.1	Introduction	155
7.2	Principles and General Considerations	155
7.3	Isolation of DNA for Analysis	157
7.4	Restriction Enzyme Digestion of DNA	157
7.5	Agarose Gel Electrophoresis of DNAs	157
7.6	Blotting of DNAs onto Nylon Membranes	159
7.6.1	Method A. Upward Capillary Transfer (6 to 12 h) ...	159
7.6.2	Method B. Downward Capillary Transfer (1 to 1.5 h Using Alkaline Buffer or 3 h Using Neutral Buffer)	161
7.7	Preparation of Probes	163
7.7.1	Preparation of Nonisotopic DNA Probes	163

7.7.1.1	Protocol 1. Direct Labeling of ssDNA Using the ECL Kit	163
7.7.1.2	Protocol 2. Random Primer Digoxigenin Labeling of dsDNA	165
7.7.1.3	Protocol 3. Nick Translation Labeling of dsDNA with Biotin-11-dUTP or Digoxigenin-11-dUTP	167
7.7.2	Preparation of Isotopic DNA Probes	168
7.7.2.1	Protocol 1. Nick Translation Labeling of dsDNA	168
7.7.2.2	Protocol 2. DE-81 Filter-Binding Assay ...	168
7.7.2.3	Protocol 3. Trichloroacetic Acid Precipitation	168
7.7.2.4	Protocol 4. Random Primer Labeling of dsDNA	170
7.7.2.5	Protocol 5. 3'-End Labeling of ssDNA (Oligonucleotides) with a Terminal Transferase	170
7.8	Prehybridization and Hybridization	171
7.9	Washing and/or Incubation of Antibodies	172
7.9.1	Protocol A. Washing of Filters Hybridized with ECL-Labeled Probes	172
7.9.2	Protocol B. Washing and Antibody Incubation of Filters Hybridized with Biotin-dUTP- or DIG-UTP-Labeled Probes	173
7.9.3	Protocol C. Washing of Filters Hybridized with Isotopic Probes	173
7.10	Detection of Hybridized Signal(s)	173
7.10.1	Method A. Chemiluminescence Detection	173
7.10.2	Method B. Colorimetric Detection of Filters Hybridized with Antibody-Conjugated Probes	174
7.10.3	Method C. Detection of Signals by Autoradiography	174
	References	179

Chapter 8 Gene Overexpression by Sense RNA in Mammalian Systems..... 181

8.1	Introduction	181
8.2	Design and Selection of Plasmid-Based Expression Vectors	183
8.2.1	Constitutive Promoter Vectors	183
8.2.1.1	Constitutive Promoters	183
8.2.1.2	Selectable Marker Genes	184
8.2.1.3	Reporter Genes	184
8.2.1.4	Splicing Regions	185

8.2.1.5	Kozak Sequence and Enhancer Element	185
8.2.2	Inducible Promoter Vectors	185
8.2.3	Retrovirus Vectors	186
8.3	Preparation of Plasmid Sense cDNA Constructs	190
8.4	Transient Transfection of Mammalian Cells with Sense Constructs	190
8.4.1	Method A. Transfection by Calcium Phosphate Precipitation	190
8.4.2	Method B. Transfection by Retrovirus Vectors	193
8.4.2.1	Protocol 1. Preparation of Viral Supernatant by Transient Transfection of a Packaging Cell Line with Retrovirus Vector Constructs	193
8.4.2.2	Protocol 2. Production of Stably Transfected Producer Cell Lines	194
8.4.2.3	Protocol 3. Determination of Viral Titer	195
8.4.2.4	Protocol 4. Amplification of Virus Stock by Serial Reinfection of Fresh Target Cells	196
8.4.2.5	Protocol 5. Transfection of Cells of Interest with the High Titer Stock of Replication-Incompetent Retroviruses	197
8.5	Stable Transfection of Mammalian Cells with Sense DNA Constructs	198
8.5.1	Method A. Transfection by Liposomes	198
8.5.2	Method B. Transfection by Electroporation	198
8.5.3	Method C. Transfection by Retrovirus Vectors	199
8.6	Selection of Stably Transfected Cell Lines with Appropriate Drugs	199
8.7	Characterization of Stably Transfected Cell Clones	200
8.7.1	Analysis of Gene Overexpression at the Protein Level by Western Blotting	201
8.7.2	Examination of the Expression of Sense RNA by Northern Blotting	202
8.7.3	Determination of Integration Copy Number by Southern Blot Analysis	202
8.7.3.1	Isolation of Genomic DNA from Cultured Cells	202
8.7.3.2	Analysis of Southern Blot Data	203
8.7.4	Expression Assay of a Reporter Gene	203
8.7.4.1	Activity Assay of CAT	203
8.7.4.2	Luciferase Assay	204
8.7.4.3	β -Galactosidase Assay	205
8.7.4.4	β -Galactosidase Staining of Cells	206

8.8	Generation of Transgenic Mice from Sense ES Clones	207
8.9	Characterization of Transgenic Mice	207
	References	208

Chapter 9	Gene Underexpression in Cultured Cells and Animals by Antisense DNA and RNA Strategies	209
9.1	Introduction	209
9.2	Antisense Oligonucleotide Approaches.....	209
9.2.1	Design and Synthesis of Antisense Oligonucleotides.....	209
9.2.2	Treatment of Cultured Cells with Antisense Oligomers and Determination of the Optimum Dose of Oligomers by Western Blot Analysis.....	211
9.2.3	Treatment of Cultured Cells Using an Optimum Dose of Oligomers.....	213
9.2.4	Analysis of Inhibition of Gene Expression by Western Blotting.....	213
9.3	Design and Selection of Plasmid-Based Expression Vectors.....	214
9.4	Preparation of Plasmid Antisense cDNA Constructs.....	214
9.5	Transient Transfection of Cultured Cells with Antisense Constructs.....	215
9.6	Stable Transfection of Cultured Cells with Antisense DNA Constructs	215
9.6.1	Method A. Transfection by Liposomes	215
9.6.2	Method B. Transfection by Microinjection	217
9.6.3	Method C. Transfection by Electroporation	218
9.6.4	Method D. Transfection by Retrovirus Vectors	218
9.7	Selection of Stably Transfected Cell Lines with Appropriate Drugs.....	218
9.8	Characterization of Stably Transfected Cell Clones	218
9.8.1	Analysis of Gene Underexpression at the Protein Level by Western Blotting.....	218
9.8.2	Examination of the Expression of Antisense RNA by Northern Blotting.....	219
9.8.3	Determination of Integration Copy Number by Southern Blot Analysis.....	219
9.8.4	Expression Assay of Reporter Genes	220
9.9	Generation of Transgenic Mice	220
9.9.1	Method A. Production of Transgenic Mice from Stably Transfected ES Cells	220
9.9.1.1	Selection of C57BL/6J Estrous Females	220
9.9.1.2	Preparation of a Bank of Sterile Males by Vasectomy	221

9.9.1.3	Pairing of Estrous Females and Sterile Males.....	222
9.9.1.4	Preparation of Blastocyst-Stage Embryos from Pseudopregnant Mice	222
9.9.1.5	Preparation of Micromanipulation Apparatus.....	223
9.9.1.6	Injection of ES Cells into Blastocysts.....	224
9.9.1.7	Reimplantation of the Injected Blastocysts into the Uterus of Recipient Females	225
9.9.2	Method B. Production of Transgenic Mice from Oocytes.....	225
9.9.2.1	Preparation of Oocytes	225
9.9.2.2	Microinjection of DNA Constructs into Oocytes	227
9.9.2.3	Reimplantation of Injected Eggs into Recipient Female Mice and Generation of Founder Mice	227
9.10	Characterization of Transgenic Mice	228
	References	229

Chapter 10	Analysis of Gene Expression at Functional Genomic Level Using Northern Blotting or PCR.....	231
10.1	Introduction	231
10.2	Principles and General Considerations	232
10.3	Isolation of Total RNAs and/or Purification of mRNAs.....	234
10.4	Electrophoresis of RNAs Using Formaldehyde Agarose Gels.....	234
10.5	Blotting of RNAs onto Nylon Membranes by the Capillary Method	237
10.6	Preparation of Isotopic or Nonisotopic DNA/RNA Probes	237
10.6.1	Protocol A. Preparation of DNA Probes.....	237
10.6.2	Protocol B. Preparation of RNA Probes by Transcription <i>in Vitro</i>	238
10.7	Hybridization and Detection of Signals	241
10.8	Analysis of mRNA Expression by a Semiquantitative PCR Approach.....	241
	References	246

Chapter 11	Analysis of Gene Expression at Proteomic Level via Western Blotting.....	249
11.1	Introduction	249
11.2	Principles	251

11.3	Extraction of Cellular Proteins.....	253
11.3.1	Method A. Extraction of Total Proteins Using Lauroylsarcosine Buffer.....	253
11.3.2	Method B. Determination of Protein Concentration Using Bradford Assay.....	255
11.4	Analysis of Proteins by SDS-PAGE and Western Blotting ...	255
11.4.1	Protocol 1. Preparation of SDS-Separation Gels	255
11.4.2	Protocol 2. Preparation of Stacking Gels	256
11.4.3	Protocol 3. Electrophoresis.....	257
11.4.4	Protocol 4. Staining and Destaining of SDS- PAGE Using a Modified CB Method	258
11.4.5	Protocol 5. Transfer of Proteins from SDS-PAGE onto a Nitrocellulose or PVDF Membrane by Electroblotting.....	259
11.4.5.1	Method A. Semidry Electroblotting	259
11.4.5.2	Method B. Liquid Transfer Using a Hoeffer TE 42 Blotting Apparatus	260
11.4.6	Protocol 6. Blocking and Hybridization of Membrane Filter Using Specific Antibodies.....	261
11.4.7	Protocol 7. Detection of Hybridized Signal(s).....	262
11.4.7.1	Method A. Chemiluminescence Detection for Peroxidase-Conjugated or Biotin-Labeled Antibodies	262
11.4.7.2	Method B. Colorimetric Detection for Alkaline Phosphatase-Conjugated Antibodies.....	262
11.5	Analysis of Proteins by 2-D Gel Electrophoresis.....	263
	References	266

Chapter 12	Analysis of Cellular DNA or Abundance of mRNA by Radioactivity <i>in Situ</i> Hybridization.....	269
12.1	Introduction	269
12.2	Tissue Fixation, Embedding, Sectioning, and Mounting of Sections on Slides.....	270
12.2.1	Preparation of Silane-Coated Glass Slides.....	270
12.2.1.1	Method A. Silanization of Slides.....	270
12.2.1.2	Method B. Treatment of Slides with Poly-L-Lysine	270
12.2.1.3	Method C. Gelatin-Coating of Slides	270
12.2.2	Preparation of Fixation Solutions.....	270
12.2.2.1	Preparation of 4% (w/v) PFA Fixative (1 l).....	270
12.2.3	Fixation of Cultured Cells on Slides	271
12.2.4	Tissue Fixation, Embedding, Sectioning, and Mounting of Sections on Slides.....	271

12.2.4.1	Fixation	271
12.2.4.2	Embedding	272
12.2.4.3	Sectioning and Mounting	273
12.2.5	Cryosectioning	273
12.2.5.1	Preparation of Frozen Specimens	273
12.2.5.2	Freeze Sectioning	274
12.2.5.3	Fixation	274
12.3	<i>In Situ</i> Hybridization and Detection Using Isotopic Probes	275
12.3.1	Dewaxing of Sections	275
12.3.2	Protease Digestion	276
12.3.3	DNase Treatment for <i>in Situ</i> Hybridization of RNA	277
12.3.4	RNase Treatment for <i>in Situ</i> Hybridization of DNA	277
12.3.5	Preparation of Radioactive Probes	278
12.3.5.1	Synthesis of Probes for DNA Hybridization Using Random Primer Labeling of dsDNA	278
12.3.5.2	Preparation of [³⁵ S]UTP Riboprobe for RNA Hybridization by Transcription <i>in Vitro</i> Labeling	281
12.3.6	<i>In Situ</i> Hybridization	283
12.3.7	Detection of Hybridized Signals	285
	References	289

Chapter 13 Localization of DNA or Abundance of mRNA by Fluorescence

	<i>in Situ</i> Hybridization	291
13.1	Introduction	291
13.2	Cell or Tissue Fixation, Tissue Embedding, Sectioning, and Mounting	291
13.3	Dewaxing of Sections, Protease Digestion, and DNase or RNase Treatment of Specimens for <i>in Situ</i> Hybridization	292
13.4	Preparation of Nonisotopic Probes Using One of the Following Methods, Depending on Specific Probe and Detection Strategies	292
13.4.1	Method A. Random Primer Digoxigenin Labeling of dsDNA	292
13.4.2	Method B. Nick Translation Labeling of dsDNA with Biotin-11-dUTP or Digoxigenin-11-dUTP	293
13.4.3	Method C. Riboprobe or RNA Labeling	293
13.5	<i>In Situ</i> Hybridization of Specimens	296
13.6	Enzymatic Detection of Hybridized Signals Using Colorimetric Substrates NBT and BCIP	297

13.7 Fluorescence Detection of Hybridized Signals	298
References	301

Chapter 14 *In Situ* PCR Hybridization of Low Copy Genes and *in Situ*

RT-PCR Detection of Low Abundance mRNAs	303
14.1 Introduction	303
14.2 Detection of a Low Copy Gene by <i>in Situ</i> PCR	
Hybridization	304
14.2.1 Design of Specific Primers for <i>in Situ</i> PCR	
Amplification of Target DNA Sequences	305
14.2.2 Synthesis and Testing of the Designed Primers	307
14.2.3 Carrying Out Fixation of Cells or Tissues,	
Tissue Embedding, Sectioning, and Mounting of	
Sections on Slides	307
14.2.4 Dewaxing of Sections (if Necessary), Protease	
Digestion, and DNase or RNase Treatment of	
Specimens	308
14.2.5 Preparation of Radioactive Probes for RISH or	
Nonradioactive Probes for FISH	308
14.2.6 Performance of <i>in Situ</i> PCR	308
14.2.7 Performance of <i>in Situ</i> Hybridization and	
Detection by RISH or by FISH	311
14.3 Detection of Low Abundance mRNA by <i>in Situ</i> RT-PCR	
Hybridization	312
14.3.1 Carrying Out Cell or Tissue Fixation, Tissue	
Embedding, Sectioning, and Mounting of	
Sections on Slides	312
14.3.2 Dewaxing of Sections, Protease Digestion, and	
DNase or RNase Digestion of Specimens	314
14.3.3 Performance <i>in Situ</i> Reverse Transcription	
Reaction on Sections	314
14.3.4 Performance of RNase (DNase-Free)	
Digestion of Specimens to Eliminate Potential	
Mispriming between PCR Primers and mRNA	
Molecules	315
14.3.5 Preparation of Radioactive Probes for RISH or	
Nonradioactive Probes for FISH	315
14.3.6 Design of Specific Primers for <i>in Situ</i> PCR	315
14.3.7 Carrying Out <i>in Situ</i> PCR	315
14.3.8 Performance of <i>in Situ</i> Hybridization and	
Detection by RISH or by FISH	315
14.4 <i>In Situ</i> PCR or RT-PCR Detection of DNA or mRNA	
by Direct Incorporation of Digoxigenin-11-dUTP or	
Biotin-dUTP without Hybridization	316
References	317

Chapter 15	Isolation and Characterization of Genes from Genomic DNA Libraries	319
15.1	Introduction	319
15.2	Selection of Lambda Vectors	320
15.3	Isolation of High Molecular Weight of Genomic DNA	320
15.4	Partial Digestion of Genomic DNA Using <i>Sau3AI</i>	322
