Preface	xxiii
1 100 Years of Ethylene – A Personal View	1
<i>Don Grierson</i>	
1.1 Introduction	1
1.2 Ethylene biosynthesis	2
1.3 Ethylene perception and signalling	7
1.4 Differential responses to ethylene	9
1.5 Ethylene and development	10
1.6 Looking ahead	13
Acknowledgements	14
References	14
2 Early Events in the Ethylene Biosynthetic Pathway – Regulation of the Pools of Methionine and S-Adenosylmethionine	19
<i>Katharina Bürstenbinder and Margret Sauter</i>	
2.1 Introduction	20
2.2 The metabolism of Met and SAM	22
2.3 Regulation of <i>de novo</i> Met synthesis	25
2.4 Regulation of the SAM pool	27
2.4.1 Regulation of SAMS genes by ethylene and of SAMS enzyme activity by protein-S-nitrosylation	29
2.5 The activated methyl cycle	30
2.6 The S-methylmethionine cycle	32
2.7 The methionine or Yang cycle	35
2.7.1 The Yang cycle in relation to polyamine and nicotianamine biosynthesis	39
2.7.2 Regulation of the Yang cycle in relation to ethylene synthesis	40
2.8 Conclusions	42
Acknowledgement	43
References	44

3	The Formation of ACC and Competition Between Polyamines and Ethylene for SAM	53
	<i>Smadar Harpaz-Saad, Gyeong Mee Yoon, Autar K. Mattoo, and Joseph J. Kieber</i>	
3.1	Introduction	53
3.2	Identification and characterization of ACC synthase activity in plants	54
3.2.1	Historical overview	54
3.2.2	Purification and properties of the ACC synthase protein	56
3.3	Analysis of ACC synthase at the transcriptional level	58
3.3.1	Molecular cloning of ACC synthase genes	58
3.3.2	Transcriptional regulation of the ACC synthase gene family	59
3.4	Post-transcriptional regulation of ACS	62
3.4.1	Identification and characterization of interactions with ETO1	62
3.4.2	Regulation of ACS degradation	64
3.5	Does ACC act as a signal?	65
3.6	Biosynthesis and physiology of polyamines	67
3.6.1	SAM is a substrate for polyamines	67
3.6.2	Physiology of polyamine effects <i>in vitro</i> and <i>in vivo</i>	67
3.6.3	Concurrent biosynthesis of ethylene and polyamines	70
3.6.4	Do plant cells invoke a homeostatic regulation of SAM levels?	72
	Acknowledgements	72
	References	72
4	The Fate of ACC in Higher Plants	83
	<i>Sarah J. Dorling and Michael T. McManus</i>	
4.1	Introduction	83
4.2	History of the discovery of ACC oxidase as the ethylene-forming enzyme	84
4.2.1	Early characterization of ACC oxidase	84
4.2.2	Cloning of the ethylene-forming enzyme as an indicator of enzyme activity	85
4.2.3	Initial biochemical demonstration of ethylene-forming enzyme activity <i>in vitro</i>	86
4.3	Mechanism of the ACC oxidase-catalyzed reaction	86
4.3.1	Investigation of the ACO reaction mechanism	87
4.3.2	Metabolism of HCN	89
4.3.3	Evidence of the conjugation of ACC	91
4.4	Transcriptional regulation of ACC oxidase	92
4.4.1	ACO multi-gene families	92

4.4.2	Differential expression of members of ACO multi-gene families in response to developmental and environmental stimuli	94
4.4.3	Transcriptional regulation of ACO gene expression	96
4.4.4	Crosstalk between ethylene signalling elements and ACO gene expression	97
4.5	Translational regulation of ACC oxidase	97
4.6	Evidence that ACC oxidase acts as a control point in ethylene biosynthesis	100
4.6.1	Cell-specific expression of ACC oxidase	102
4.6.2	Differential expression of ACS and ACO genes	103
4.7	Evolutionary aspects of ACC oxidase	104
	Acknowledgements	105
	References	105
5	Perception of Ethylene by Plants – Ethylene Receptors <i>Brad M. Binder, Caren Chang and G. Eric Schaller</i>	117
5.1	Historical overview	118
5.2	Subfamilies of ethylene receptors and their evolutionary history	120
5.3	Ethylene binding	123
5.3.1	Requirements for a metal cofactor	123
5.3.2	Characterization of the ethylene-binding pocket and signal transduction	124
5.4	Signal output from the receptors	126
5.5	Overlapping and non-overlapping roles for the receptor isoforms in controlling various phenotypes	128
5.6	Post-translational regulation of the receptors	131
5.6.1	Clustering of receptors	131
5.6.2	Ethylene-mediated degradation of receptors	132
5.6.3	Regulatory role of REVERSION-TO-ETHYLENE SENSITIVITY1 (RTE1)/GREEN-RIPE (GR)	133
5.6.4	Other proteins that interact with the ethylene receptors	134
5.7	Conclusions and model	135
	Acknowledgements	137
	References	138
6	Ethylene Signalling: the CTR1 Protein Kinase <i>Silin Zhong and Caren Chang</i>	147
6.1	Introduction	148
6.2	Discovery of CTR1, a negative regulator of ethylene signal transduction	148
6.2.1	Isolation of the <i>Arabidopsis</i> CTR1 mutant	148
6.2.2	CTR1 mutant phenotypes in <i>Arabidopsis</i>	149

6.2.3	Placement of <i>CTR1</i> in the ethylene-response pathway	150
6.3	<i>CTR1</i> Encodes a serine/threonine protein kinase	151
6.3.1	Molecular cloning and sequence analysis of the <i>Arabidopsis CTR1</i> gene	151
6.3.2	<i>CTR1</i> biochemical activity	152
6.4	The <i>CTR1</i> gene family	153
6.4.1	The <i>CTR</i> multi-gene family in tomato	153
6.4.2	Functional roles of tomato <i>CTR</i> genes	153
6.4.3	Transcriptional regulation of <i>CTR</i> -like genes	155
6.5	Regulation of <i>CTR1</i> activity	156
6.5.1	Physical association of <i>CTR1</i> with ethylene receptors	158
6.5.2	Membrane localization of <i>CTR1</i>	159
6.5.3	An inhibitory role for the <i>CTR1</i> N-terminus?	159
6.5.4	Other factors that potentially interact with and regulate <i>CTR1</i> activity	160
6.6	Elusive targets of <i>CTR1</i> signalling	161
6.7	<i>CTR1</i> crosstalk and interactions with other signals	162
6.8	Conclusions	163
	Acknowledgements	164
	References	164
7	EIN2 and EIN3 in Ethylene Signalling	169
	<i>Young-Hee Cho, Sangho Lee and Sang-Dong Yoo</i>	
7.1	Introduction	169
7.2	Overview of ethylene signalling and EIN2 and EIN3	172
7.3	Genetic identification and biochemical regulation of EIN2	173
7.4	EIN3 regulation in ethylene signalling	174
7.4.1	Genetic identification and biochemical regulation of EIN3	174
7.4.2	Structural and functional analysis of ein3 function	178
7.4.3	Function of EIN3 as transcription activator	180
7.5	Functions of ERF1 and other ERFs in ethylene signalling	181
7.6	Future directions	183
	Acknowledgements	184
	References	184
8	Ethylene in Seed Development, Dormancy and Germination	189
	<i>Renata Bogatek and Agnieszka Gniazdowska</i>	
8.1	Introduction	189
8.2	Ethylene in seed embryogenesis	192
8.2.1	Ethylene biosynthesis during zygotic embryogenesis	192

8.2.2	Ethylene involvement in the regulation of seed morphology	194
8.3	Ethylene in seed dormancy and germination	194
8.3.1	Ethylene biosynthesis during dormancy release and germination	194
8.3.2	The role of ethylene in seed heterogeneity	199
8.4	Ethylene interactions with other plant hormones in the regulation of seed dormancy and germination	199
8.5	Ethylene interactions with ROS in the regulation of seed dormancy and germination	202
8.6	Ethylene interactions with other small gaseous signalling molecules (NO, HCN) in the regulation of seed dormancy and germination	204
8.7	Concluding remarks	207
	Acknowledgements	209
	References	209
9	The Role of Ethylene in Plant Growth and Development <i>Filip Vandenbussche and Dominique Van Der Straeten</i>	219
9.1	Introduction	219
9.2	Design of root architecture	220
9.3	Regulation of hypocotyl growth	225
9.4	Shoot architecture and orientation: post-seedling growth	229
9.4.1	Inhibition of growth by ethylene	229
9.4.2	Stimulation of growth by ethylene	229
9.4.3	Shoot gravitropism	231
9.4.4	Control of stomatal density and aperture	231
9.4.5	Activity of the shoot apical meristem	231
9.5	Floral transition	232
9.6	Determination of sexual forms of flowers	232
9.7	Ethylene effects on growth controlling mechanisms	233
9.8	Conclusions	234
	Acknowledgements	234
	References	234
10	Ethylene and Cell Separation Processes <i>Zinnia H. Gonzalez-Carranza and Jeremy A. Roberts</i>	243
10.1	Introduction	243
10.2	Overview of the cell separation process	244
10.2.1	Abscission	245
10.2.2	Dehiscence	249
10.2.3	Aerenchyma formation	251
10.2.4	Stomata development and hydathode formation	252
10.2.5	Root cap cell sloughing and lateral root emergence	254
10.2.6	Xylem differentiation	257

10.3	Transcription analyses during cell separation	258
10.4	Relationship between ethylene and other hormones in the regulation of cell separation	259
10.4.1	Ethylene and IAA	259
10.4.2	Ethylene and jasmonic acid	260
10.4.3	Ethylene and abscisic acid	261
10.5	Ethylene and signalling systems during cell separation	261
10.5.1	Role of IDA, IDA-like, HAESA and HAESA-like genes	261
10.5.2	MAP kinases	262
10.5.3	Nevershed	262
10.6	Application of knowledge of abscission to crops of horticultural and agricultural importance	262
10.7	Conclusions and future perspectives	263
	References	265
11	Ethylene and Fruit Ripening	275
	<i>Jean-Claude Pech, Eduardo Purgatto, Mondher Bouzayen and Alain Latché</i>	
11.1	Introduction	276
11.2	Regulation of ethylene production during ripening of climacteric fruit	276
11.2.1	Regulation of ethylene biosynthesis genes during the System 1 to System 2 transition	277
11.2.2	ACS gene alleles are major determinants of ethylene biosynthesis and shelf-life of climacteric fruit	280
11.2.3	Genetic determinism of the climacteric character	281
11.3	Transcriptional control of ethylene biosynthesis genes	282
11.4	Role of ethylene in ripening of non-climacteric fruit	283
11.5	Manipulation of ethylene biosynthesis and ripening	284
11.6	Ethylene-dependent and -independent aspects of climacteric ripening	286
11.7	Ethylene perception and transduction effects in fruit ripening	288
11.7.1	Ethylene perception	288
11.7.2	Chemical control of the post-harvest ethylene response in fruit ripening	289
11.7.3	Ethylene signal transduction	290
11.7.4	The transcriptional cascade leading to the regulation of ethylene-responsive and ripening-related genes	291
11.8	Hormonal crosstalk in fruit ripening	292
11.8.1	Ethylene and abscisic acid	293

11.8.2	Ethylene and jasmonate	293
11.8.3	Ethylene and auxin	294
11.8.4	Ethylene and the gibberellins	295
11.9	Conclusions and future directions	295
	Acknowledgements	296
	References	296
12	Ethylene and Senescence Processes	305
	<i>Laura E. Graham, Jos H.M. Schippers, Paul P. Dijkwel and Carol Wagstaff</i>	
12.1	Introduction	306
12.2	Overview of ethylene-mediated senescence in different plant organs	306
12.2.1	Leaf senescence	306
12.2.2	Pod senescence	310
12.2.3	Petal senescence	312
12.3	Transcriptional regulation of ethylene-mediated senescence processes	314
12.3.1	Global regulation	314
12.3.2	Transcription factors and signalling pathways	315
12.4	Interaction of ethylene with other hormones in relation to senescence	323
12.5	The importance of ethylene-mediated senescence in post-harvest biology	325
12.5.1	Post-harvest factors affected by ethylene	325
12.5.2	Ways of controlling ethylene-related post-harvest losses	327
12.5.2.1	Packaging	327
12.5.2.2	1-Methylcyclopropene	328
12.6	Conclusions and future perspectives	329
	References	329
13	Ethylene: Multi-Tasker in Plant-Attacker Interactions	343
	<i>Sjoerd Van der Ent and Corné M.J. Pieterse</i>	
13.1	Introduction	344
13.2	Hormones in plant defence signalling	346
13.2.1	Hormones as defence regulators	346
13.2.2	Salicylic acid	347
13.2.3	Jasmonic acid	347
13.2.4	Ethylene	348
13.3	Implications of ethylene in basal defence and disease susceptibility	348
13.3.1	Studies with <i>Arabidopsis thaliana</i>	348
13.3.2	Studies with tobacco	350

13.3.3	Studies with tomato	351
13.3.4	Studies with soybean	352
13.3.5	Other plant species	352
13.4	Implications of ethylene in systemic immune responses	353
13.4.1	Systemic induced immunity	353
13.4.2	Rhizobacteria-mediated ISR	354
13.4.3	Genetic dissection of the ISR pathway in <i>Arabidopsis</i>	356
13.4.4	Priming for enhanced JA/ethylene-dependent defences	358
13.4.5	Molecular mechanisms of priming for enhanced defence	360
13.4.6	Costs and benefits of priming for enhanced defence	362
13.5	Ethylene modulates crosstalk among defence-signalling pathways	362
13.5.1	Crosstalk in defence signalling	362
13.5.2	Interplay among SA, JA and ethylene signalling	363
13.5.3	Ethylene: an important modulator of defence-signalling pathways	365
13.6	Concluding remarks	365
	Acknowledgements	366
