Foreword	xi
Preface	xiii
Acknowledgements	xv
1 Introduction	1
1.1 Setting the scene	1
1.2 What is urban ecology?	1
1.3 Why is urban ecology interesting?	2
1.3.1 <i>Urban environments are extensive and growing</i>	3
1.3.2 <i>Urban environments have inherent ecological interest</i>	6
1.3.3 <i>Urban environments are ideal for testing and developing ecological theory</i>	6
1.3.4 <i>The nature of urban environments affects human health and wellbeing</i>	7
1.3.5 <i>Urban environments are important for conserving biological diversity</i>	8
1.4 The aims of this book	10
Study questions	10
References	10
2 Urban environments	15
2.1 Introduction	15
2.2 Primary biophysical processes associated with urbanization	19
2.2.1 <i>Removal of existing vegetation</i>	20
2.2.2 <i>Construction of buildings, roads and other urban infrastructure</i>	21
2.2.3 <i>Replacement of permeable with impermeable surfaces</i>	22
2.2.4 <i>Reduction in the area of open space</i>	22
2.2.5 <i>Modification or destruction of aquatic habitats</i>	24
2.2.6 <i>Production of pollution and waste</i>	25

2.3	Secondary biophysical processes associated with urbanization	28
2.3.1	<i>Habitat loss, fragmentation and isolation</i>	28
2.3.2	<i>Climatic changes</i>	28
2.3.3	<i>Altered hydrological regimes</i>	29
2.3.4	<i>Pollution of air, water and soil</i>	29
2.3.5	<i>Altered noise and light regimes</i>	30
2.4	Stochasticity in urban environments	31
2.5	Summary	32
	Study questions	33
	References	33
3	Population- and species-level responses to urbanization	41
3.1	Introduction	41
3.2	Responses to the secondary biophysical processes of urbanization	43
3.2.1	<i>Habitat loss, fragmentation and isolation</i>	43
3.2.2	<i>Climatic changes</i>	48
3.2.3	<i>Altered hydrological regimes</i>	49
3.2.4	<i>Pollution of air, water and soil</i>	50
3.2.5	<i>Altered noise and light regimes</i>	53
3.3	Biological introductions and invasions	57
3.3.1	<i>Plants and fungi</i>	57
3.3.2	<i>Animals</i>	59
3.4	Human disturbance	63
3.5	Stochastic effects on populations in urban environments	65
3.6	Summary	66
	Study questions	66
	References	67
4	Community-level responses to urbanization	81
4.1	Introduction	81
4.2	Selection: niche theories in urban ecology	84
4.2.1	<i>The ecological niche and the environmental gradient</i>	84
4.2.2	<i>Habitat models</i>	90
4.2.3	<i>Ecological guilds and resource-competition models</i>	94

4.3	Ecological drift: modelling stochasticity in urban communities	97
4.4	Dispersal: the movement of individuals through space	99
4.5	Diversification: the evolution of new lineages in urban environments	102
4.6	Summary	104
	Study questions	105
	References	105
5	Ecosystem-level responses to urbanization	114
5.1	Introduction	114
5.2	Carbon	116
5.2.1	<i>Introduction to the carbon cycle</i>	116
5.2.2	<i>Effects of urbanization on the carbon cycle</i>	119
5.2.3	<i>Mitigation strategies</i>	122
5.3	Water	127
5.3.1	<i>Introduction to the water cycle</i>	127
5.3.2	<i>Effects of urbanization on the water cycle</i>	127
5.3.3	<i>Mitigation strategies</i>	129
5.4	The nitrogen cycle	131
5.4.1	<i>Effects of urbanization on the nitrogen cycle</i>	132
5.4.2	<i>Mitigation strategies</i>	135
5.5	Summary	136
	Study questions	136
	References	137
6	The urban ecology of humans	146
6.1	Introduction	146
6.2	The urban form	150
6.2.1	<i>Urban parks and open space</i>	150
6.2.2	<i>Urban sprawl and car dependence</i>	156
6.2.3	<i>Neighbourhood disadvantage and neighbourhood disorder</i>	157
6.3	Pollution and waste	158
6.3.1	<i>Outdoor air pollution</i>	160
6.3.2	<i>Indoor air pollution</i>	161
6.4	Climatic changes in urban environments	162

6.5	Health inequities in the world's cities	163
6.6	Summary	164
	Study questions	165
	References	165
7	Conserving biodiversity and maintaining ecosystem services in cities	175
7.1	Introduction	175
7.2	Strategies for conserving biodiversity and maintaining ecosystem services in cities	177
7.2.1	<i>Integrate urban ecology with urban planning and design</i>	177
7.2.2	<i>Protect biodiverse landscape features and important biophysical assets</i>	180
7.2.3	<i>Grow the green city</i>	182
7.2.4	<i>Maintain or re-establish landscape connectivity</i>	185
7.2.5	<i>Use small spaces</i>	187
7.3	Novel habitats, novel ecosystems	190
7.4	Summary	192
	Study questions	192
	References	193
8	Summary and future directions	204
8.1	Introduction	204
8.2	Do we need a new theory of urban ecology?	204
8.2.1	<i>The complexity of urban ecosystems</i>	205
8.2.2	<i>The human domination of urban ecosystems</i>	206
8.2.3	<i>The uniqueness of urban ecosystems</i>	206
8.3	The definition and scope of urban ecology	207
8.4	Do we need a new theory of urban science?	208
8.5	Future directions	209
	Study questions	210
	References	211
