

Brief Table of Contents

Contents vii

Preface xix

About the Authors xxi

Part 1. GENES AND CHROMOSOMES 1

Chapter 1. Genes Are DNA 2

Chapter 2. Genes Encode RNAs and Polypeptides 26

Chapter 3. Methods in Molecular Biology and Genetic Engineering 42

Chapter 4. The Interrupted Gene 81
Edited by Donald Forsdyke

Chapter 5. The Content of the Genome 100

Chapter 6. Genome Sequences and Gene Numbers 120

Chapter 7. Clusters and Repeats 141

Chapter 8. Genome Evolution 161

Chapter 9. Chromosomes 192
Edited by Hank W. Bass

Chapter 10. Chromatin 223

Part 2. DNA REPLICATION AND RECOMBINATION 265

Chapter 11. Replication Is Connected to the Cell Cycle 266
Edited by Barbara Funnell

Chapter 12. The Replicon: Initiation of Replication 286
Edited by Stephen D. Bell

Chapter 13. DNA Replication 304
Edited by Peter Burgers

Chapter 14. Extrachromosomal Replicons 328
Edited by Søren Johannes Sørensen and Lars Hestbjerg Hansen

Chapter 15. Homologous and Site-Specific Recombination 354
Edited by Hannah L. Klein and Samantha Hoot

vi

Chapter 16. Repair Systems 395

Chapter 17. Transposable Elements and Retroviruses 424
Edited by Damon Lisch

Chapter 18. Somatic Recombination and Hypermutation in the Immune System 459

Part 3. TRANSCRIPTION AND POSTTRANSCRIPTIONAL MECHANISMS 508

Chapter 19. Prokaryotic Transcription 509
Edited by Richard Gourse

Chapter 20. Eukaryotic Transcription 549

Chapter 21. RNA Splicing and Processing 578

Chapter 22. mRNA Stability and Localization 622
Edited by Ellen Baker

Chapter 23. Catalytic RNA 647
Edited by Douglas J. Briant

Chapter 24. Translation 671

Chapter 25. Using the Genetic Code 714
Edited by John Perona

Part 4. GENE REGULATION 744

Chapter 26. The Operon 745
Edited by Liskin Swint-Kruse

Chapter 27. Phage Strategies 777

Chapter 28. Eukaryotic Transcription Regulation 804

Chapter 29. Epigenetic Effects Are Inherited 838
Edited by Trygve Tollefsbol

Chapter 30. Regulatory RNA 872

Glossary 894

Index 920
