Acknowledgment / vii

About the Author / ix

Preface: How to Use This Manual / xi

Introduction: Infrastructure and Safety Requirements / xv

Section One: Molecular Cloning

1 Transformation of Competent Bacteria
with a DNA Plasmid / 3

2 Isolation of Plasmids by Miniprep and
Restriction Enzyme Analysis / 15

3 Designing a New Construct Using Restriction
Enzymes (Computer Lab) / 23

4 Restriction Enzymes / 33

5 Ligation / 41

6 Screening a Ligation and Choosing Recombinants / 53

7 Use of Software to Design Primers for Cloning Using
the Polymerase Chain Reaction (Computer Lab) / 63

8 Running the Polymerase Chain Reaction / 67

Section Two: Gene Expression

- 9 Protein Expression and Purification / 75
- 10 Characterization of Purified Protein / 83
- 11 Protein Crystallization / 89

Section Three: Fluorescent Reporter Genes in Mammalian Cells

- 12 Transfecting Mammalian Cells with Custom-Designed Constructs / 101
- 13 Screening Fluorescent Reporter Gene Expression in Mammalian Cells / 113

Section Four: Nanoparticles

- 14 Synthesis of Quantum Dots / 119
- 15 Synthesis of Gold Nanoparticles / 125

Section Five: Electrophysiology

- 16 Electrophysiology: Lipid Bilayer Recording / 131
- 17 Electrophysiology Alternative: Introduction to Lipid Vesicles / 137

Appendices: Instructor Information and Guides

- Appendix 1 Disposables and Supplies Needed / 145
- Appendix 2 Instructors' Guide to Behind-the-Scenes Preparation / 149
- Appendix 3 Grading Recommendations and Guidelines / 153
- Appendix 4 Advanced Options: Customizing the Course / 163
