<i>Preface to the Series</i>	v
<i>Preface</i>	vii
<i>Acknowledgements</i>	xi
1. Introduction	1
1.1 Sex determination	2
1.2 Ontogeny of gonads	4
1.3 Regulatory mechanisms	7
2. Ovarian Differentiation	20
2.1 Differentiation types	20
2.2 Interrupted oogenesis	22
2.3 Viviparity	37
2.4 Quantum of yolk	47
2.5 Maternal hormones	56
2.6 Sexual receptivity	61
2.7 Stress and spawning	62
2.8 Departures from norm	66
3. Testicular Differentiation	70
3.1 Spermatogenesis	71
3.2 Xenogenesis and differentiation	82
3.3 Spermiogenesis	86
3.4 Spermatophore and spermatozeugma	89
3.5 Accessory glands	90
3.6 Corticosteroids	93
3.7 Spermiation	96
3.8 Departures from norm	97
4. Gametogenesis in Unisexuals	100
4.1 Oogenesis	101
4.2 Paternal leakage	103
4.3 Hybridogenesis	105
4.4 Genome addition	106

5. Morphotypes and Differentiation	110
5.1 Theory and classification	111
5.2 Plastic reversibles	115
5.3 Plastic transformants	117
5.4 Fixed sex linked genotypes	122
5.5 Gonado somatic index	125
5.6 Sneakers and paternity	125
5.7 Aggressive behavior	127
5.8 The challenge hypothesis	134
6. Sex Changers	137
6.1 Secondary gonochores	137
6.2 Structural diversity	140
6.3 Sexual phenotypes	146
6.4 Simultaneous hermaphrodites	148
6.5 Sequentials and serials	150
6.6 Model fishes	157
6.7 Social mediation	165
6.8 Sex changing chronology	169
6.9 Gonadectomy	172
7. Sex Reversal	175
7.1 Gonadal differentiation	175
7.2 Chemical inducers	180
7.3 Labile period	184
7.4 Methods of administration	187
7.5 Dosage	190
7.6 Sex reversal and survival	194
7.7 Growth and reproduction	198
7.8 Monosex culture	206
7.9 Residues and elimination	210
8. New Hypotheses	213
References	225
