
Contents

Preface.....	xv
Acknowledgments.....	xvii
Author.....	xix

SECTION I *Life and Evolution*

Chapter 1 Definitions of Life.....	3
Introduction.....	3
RNA and Life.....	6
Defining Life.....	9
Imagining Cellular and Molecular Dimensions.....	13
Key Points.....	16
Additional Readings.....	16
Chapter 2 Earth and Evolution.....	19
Introduction.....	19
What Is Evolution?.....	19
Earth History.....	22
A Short History of the Study of Evolution.....	30
Earth History as One Year.....	35
Key Points.....	37
Additional Readings.....	38

SECTION II *Biomolecules*

Chapter 3 DNA, RNA, and Proteins.....	41
Introduction.....	41
Nucleic Acids.....	42
Translation.....	51
Amino Acids and Polypeptides.....	52
Lipids.....	54
Carbohydrates.....	55
Key Points.....	56
Additional Readings.....	56
Chapter 4 The Central Dogma and Beyond.....	57
Introduction.....	57
Ribosomal RNA.....	57
Transfer RNA (tRNA).....	64
Messenger RNA.....	65

Other Small Noncoding RNA	68
Beyond the Central Dogma	69
Key Points	69
Additional Readings	69
Chapter 5 Ribosomes and Ribosomal RNA	71
Introduction	71
Ribosomes as Ribozymes	71
Origin of the Ribosome	72
Translation	74
How Many rDNA Copies Are Needed?	76
Mechanisms for Increasing rRNA Gene Copy Number	77
Complexity of Ribosomes	80
Key Points	81
Additional Readings	81
Chapter 6 Structure of the Genetic Code	83
Introduction	83
Evolution of the Genetic Code	83
Why a Triplet Codon?	87
The First Genetic Code	90
Life before Translation	92
Key Points	95
Additional Readings	96
Chapter 7 DNA Replication	97
Introduction	97
Fidelity of Replication	97
Variations of Replication	101
Topology during Replication	106
Replication of Chromosomes	107
Key Points	108
Additional Readings	109
Chapter 8 DNA Segregation	111
Introduction	111
Variations on DNA Segregation in Bacteria and Archaea	111
Mitosis	113
Variations in Mitosis and the Cell Cycle	116
Variations in Chromosome Number	118
Changes in DNA Amount through the Cell Cycle	120
Meiosis	123
Sexual Reproduction	125
Key Points	127
Additional Readings	127

SECTION III Genetics

Chapter 9	Mendelian and Non-Mendelian Characters	131
	Introduction	131
	Alleles	132
	The Basics of Mendelian Inheritance	132
	Codominance, Incomplete Dominance, Overdominance, and Underdominance	137
	Epistasis	138
	Quantitative Trait Loci	140
	Recombination and Linkage	141
	Non-Mendelian Traits	141
	Key Points	146
	Additional Readings	146
Chapter 10	Population Genetics	147
	Introduction	147
	Hardy-Weinberg Equilibrium	148
	Population Size	150
	Life Histories	151
	Modes of Reproduction	154
	Key Points	158
	Additional Readings	158
Chapter 11	Alleles through Time	159
	Introduction	159
	Natural Selection	160
	Levels of Selection	162
	Random Genetic Drift	165
	Mating and Dispersal	166
	Gene Flow	167
	Other Factors Affecting Allelic Proportions	170
	Key Points	170
	Additional Readings	171
Chapter 12	Changes to DNA	173
	Introduction	173
	Classes of Mutations	173
	Causes of Mutations	174
	Mutation during Replication	179
	DNA Repair	180
	Genetic Recombination	182
	Key Points	185
	Additional Readings	185

Chapter 13	Infectious Changes to DNA: Viruses, Plasmids, Transposons, and Introns.....	187
	Introduction.....	187
	Integration into Chromosomes.....	191
	Viruses.....	192
	Introns.....	196
	Transposable Elements.....	204
	Plasmids.....	209
	Key Points.....	210
	Additional Readings.....	211

SECTION IV *Multicellularity*

Chapter 14	Multigene Families.....	215
	Introduction.....	215
	Ribosomal RNA Gene Family.....	217
	Globin Gene Family.....	218
	Bacterial Flagella Gene Family.....	222
	Laccase Gene Family.....	223
	Histone Gene Family.....	223
	Orthologs and Paralogs.....	224
	Polyploidization and Multigene Family Evolution.....	224
	Key Points.....	227
	Additional Readings.....	227
Chapter 15	Horizontal Gene Transfer.....	229
	Introduction.....	229
	Plasmids.....	231
	Viruses.....	234
	Symbionts and Organelles.....	235
	Parasites and Pathogens.....	239
	Origin of Gram-Negative Bacteria.....	242
	Signs of HGT.....	243
	Introns.....	244
	Key Points.....	246
	Additional Readings.....	246
Chapter 16	Development: Part I—Cooperation among Cells.....	247
	Introduction.....	247
	Quorum Sensing.....	249
	Development in Animals.....	251
	Nematode Development.....	252
	Homeotic Genes and Proteins.....	253
	Arthropod Development.....	261
	Development in Vertebrates.....	264
	Hierarchy and Evolution of Homeotic Genes.....	266
	Key Points.....	268
	Additional Readings.....	269

Chapter 17	Development: Part II—Plants	271
	Introduction	271
	Plant Morphology	273
	Development in Plants	274
	Gene Expression during Development	277
	Formation of Leaves and Floral Organs	279
	Plants versus Animals	287
	Key Points	291
	Additional Readings	292
Chapter 18	Cancer	293
	Introduction	293
	Progression of Cancer	295
	Genes Involved in Cancer	298
	Types of Cancer	301
	Causes of Mutations in Carcinogenesis	301
	Point Mutations	302
	Recombination	302
	Amplification	305
	Viruses	306
	DNA Viruses	309
	Hormones	311
	Key Points	312
	Additional Readings	312

SECTION V *Molecular Biology and Bioinformatic Methods*

Chapter 19	Extraction and Quantification of Biological Molecules	315
	Introduction	315
	Extraction of Nucleic Acids Using CTAB	319
	Purification of Organellar DNA	321
	Extraction of RNA	322
	Quantification of Nucleic Acids	324
	Agarose Gel Electrophoresis	324
	Extraction of Proteins	329
	Quantification of Proteins	330
	Polyacrylamide Gel Electrophoresis	331
	Key Points	332
	Additional Readings	333
Chapter 20	Recombinant DNA and Characterization of Biological Molecules	335
	Introduction	335
	Polymerase Chain Reaction	335
	Recombinant DNA Methods	338
	Southern Hybridization	343
	Determination of Gene Copy Number	349

Microscopy	351
Protein Analysis	353
Key Points	355
Additional Readings	355
Chapter 21 Sequencing and Alignment Methods	357
Introduction	357
Development of DNA Sequencing Methods	357
High-Throughput Technologies	360
Next-Generation Sequencing	361
Protein Sequencing	365
Sequence Homology Searches	367
Aligning Sequences	368
Key Points	370
Additional Readings	371
Chapter 22 Omics: Part I	373
Introduction	373
Genomics	373
Transcriptomics	376
Metagenomics/Metatranscriptomics	378
Microbiomics	378
Key Points	381
Additional Readings	382
Chapter 23 Omics: Part II	383
Introduction	383
Proteomics	383
Structural Genomics	386
RNAomics	387
Epigenomics	388
Metabolomics	389
Functional Genomics	389
Key Points	391
Additional Readings	391
Chapter 24 Species Concepts and Phylogenetics	393
Introduction	393
What Is a Species?	393
Classification of Life	396
Reconstruction of Evolutionary History	399
Phylogenetics	400
Tree Terminology	401
Choosing a Genomic Region for Phylogenetics	402
Other Considerations When Performing Phylogenetic Analyses	408
Models of Mutation	409
Analyzing Aligned Sequences	410

Unweighted Pair Group Method with Arithmetic Mean	410
Neighbor Joining	410
Maximum Parsimony	411
Maximum Likelihood	414
Bayesian Phylogenetic Analysis	415
Bootstrapping	415
Vertical versus Horizontal Evolutionary Events	416
Key Points	417
Additional Readings	417
Chapter 25 Phylogenetic Networks and Reticulate Evolution	419
Introduction	419
Phylogenetic Analyses of Reticulate Events	420
Advantages of Phylogenetic Networks	420
Horizontal Gene Transfers	422
Species Hybridization	423
Recombination	424
Transposition	425
Reassortment	425
Examples of Reticulate Evolution Events	426
Key Points	427
Additional Readings	428
Chapter 26 Phylogenomics and Comparative Genomics	429
Introduction	429
Improvements in Sequencing and Phylogenomics	429
What to Compare	432
Single-Nucleotide Polymorphisms	433
Microsatellites and Minisatellites	433
How to Compare	434
Testing for Selection	434
Incongruent Trees	434
Comparative Genomics	435
Synteny	440
Key Points	441
Additional Readings	442
 SECTION VI Genomes	
Chapter 27 RNA Viruses	445
Introduction	445
C-Value Paradox	448
Genomes and Genomics	448
RNA Virus Genomes	449
Human Immunodeficiency Virus	449
Influenza A Virus	453
Ebola Virus	457

Key Points	458
Additional Readings	459
Chapter 28 DNA Viruses	461
Introduction	461
Bacteriophage ϕ X174	461
Bacteriophage Lambda (λ)	463
Bacteriophage T4	468
Mimivirus	471
Key Points	474
Additional Readings	474
Chapter 29 Bacteria and Archaea	475
Introduction	475
<i>Escherichia coli</i>	475
Photosynthetic Bacteria	477
<i>Aquifex</i>	479
Euryarchaeota	480
Crenarchaeota	482
Key Points	483
Additional Readings	483
Chapter 30 Mutualists and Pathogens	485
Introduction	485
Termite Gut Microbes	487
Smallest Bacterial Genome	487
Coresident Symbionts	489
Animal Parasite	490
Genome Mixing and Sorting	491
Key Points	492
Additional Readings	492
Chapter 31 Endosymbionts and Organelles	495
Introduction	495
Intracellular Endosymbionts	495
Mitochondria	496
How Many Genes Make a Functional Mitochondrion?	503
Chloroplasts	506
How Many Genes Make a Functional Chloroplast?	508
Differential Development and Function	510
Chimeric Pathways	510
Endosymbioses Leading to Other Organelles	512
Key Points	514
Additional Readings	514

Chapter 32 Protein Trafficking	515
Introduction	515
Signal Peptides in Bacteria	515
Signal Peptide Systems in Eukarya	518
Protein Trafficking in Mitochondria	520
Protein Trafficking in Chloroplasts	520
Evolution of Protein Trafficking Systems	523
Key Points	524
Additional Readings	525
Chapter 33 Eukaryotic Genomes	527
Introduction	527
Origin of the Nucleus and Mitochondrion	528
Multicellularity	531
Chromalveolata	531
Opisthokonta	532
<i>Saccharomyces cerevisiae</i>	532
<i>Caenorhabditis elegans</i>	534
<i>Drosophila melanogaster</i>	537
Archaeplastida	538
<i>Arabidopsis thaliana</i>	538
<i>Oryza sativa</i>	540
Key Points	543
Additional Readings	544
Chapter 34 Human Genome	545
Introduction	545
The Human Genome	545
Medical Genetics	548
Single-Nucleotide Polymorphisms	550
Forensics	551
Human Migration	551
Key Points	554
Additional Readings	554
Index	557
