List of Figures	xii
List of Boxes	xvii
Preface	xviii
1 INTRODUCTION	1
Key themes	1
1.1 The wider context: sex, gender, sexuality, and sexual orientation	4
1.1.1 Assigned sex and gender dysphoria	7
1.1.2 Sex as a biological construct and gender as a social construct	8
1.2 A caveat about biological determinism and ideology	8
1.3 The comparative approach	13
1.4 Biology as a part of natural science	14
1.5 Theories and the methodology of science	15
Summary	19
Further reading	24
2 SEX AND REPRODUCTION	25
Key themes	25
2.1 Does sexual motivation reveal its "purpose"?	27
2.1.1 Sex has diverse purposes through co-option	29
2.1.2 Homosexuality could be one manifestation of co-option	31
2.1.3 Sexual features can also be co-opted for non-social purposes	32
2.2 Reproduction: sexual, asexual, and non-sexual	33
2.2.1 Not all organisms reproduce sexually	33
2.2.2 Non-sexual reproductions of human cells is through mitosis and cytokinesis	37
2.2.3 Asexual reproduction in complex organisms	38
2.2.4 Switching between parthenogenesis and sexual reproduction	41

2.3	Sexual reproduction fundamentals	43
2.3.1	Female and male: Eggs and sperm	43
2.3.2	Primary versus secondary sex characteristics	45
2.4	From fertilization to the production of offspring	50
2.4.1	External versus internal fertilization	51
2.4.2	Other variations in patterns of sexual reproduction	56
	Summary	57
	Further reading	58
3	SEX AND INHERITANCE	59
	Key themes	59
3.1	How an Augustinian friar discovered the rules of sexual inheritance	62
3.1.1	Mendel's peas were a "friendly" study system	63
3.2	Developing Mendel's Law of Segregation	65
3.2.1	The second-generation offspring showed a surprising pattern of inheritance	65
3.2.2	The meaning of segregation in the making of gametes	66
3.3	Mendel's Law of Independent Assortment	70
3.4	Updating Mendelian genetics	72
3.4.1	Using modern terminology	73
3.5	Applying Mendelian genetics to humans	75
3.5.1	Mendelian inheritance of blood groups in humans	75
3.6	Sex, DNA, and chromosomes	80
3.6.1	Chromosomes are the hereditary material	80
3.6.2	The human karyotype	82
3.6.3	DNA is the genetic code	84
3.6.4	How DNA encodes information	86
3.7	What happens to chromosomes in the making of gametes?	87
3.7.1	What is crossing-over?	92
3.7.2	The two divisions of meiosis	95
3.7.3	Sex and chromosomes that don't crossover	96
3.7.4	How meiosis relates to Mendel's laws	97
	Summary	98
	Further reading	99
4	SEX AND EVOLUTION	101
	Key themes	101
4.1	A short history of evolutionary thought	102

4.1.1	Evolutionary theory is a natural result of the Enlightenment	104
4.1.2	Exploration, fossils, and a very old Earth also led to evolutionary theory	105
4.1.3	Jean-Baptiste Lamarck proposed a mechanism for evolution in 1809	106
4.1.4	Charles Darwin and the voyage of the <i>Beagle</i>	107
4.2	The principles of natural selection	113
4.2.1	The argument for natural selection	113
4.2.2	The concepts of fitness and adaptation	115
4.3	DNA as an evolutionary legacy	116
4.3.1	Mutations, and how alleles differ from one another	117
4.3.2	Chromosomal mutations can also contribute to evolution	118
4.3.3	Mutation rates in sperm and eggs	120
4.4	Thinking of breeding groups as gene pools	121
4.4.1	Human breeding groups can be thought of as gene pools	121
4.4.2	The ABO blood group gene pool	122
4.5	The evolutionary costs of sex	125
4.5.1	The numerical argument that sex is costly	125
4.5.2	Sexual reproduction also involves search costs	127
4.5.3	Sexual reproduction can entail health, injury, and mortality costs	127
4.6	The evolutionary benefits of sex	129
4.6.1	Advantages associated with a diverse gene pool	130
4.6.2	Inbreeding reveals the value of gene mixing through sex	131
4.6.3	The Red Queen hypothesis and Muller's ratchet	133
4.7	The role of sex in the creation of species	134
4.7.1	Two different patterns of species evolution	134
4.7.2	How do gene pools become split at the start of speciation?	137
4.7.3	Pre-zygotic and post-zygotic reproductive barriers	139
	Summary	141
	Further reading	142
5	SEXUAL SELECTION	143
	Key themes	143
5.1	Sexual selection is a sub-category of natural selection	145
5.1.1	Comparing examples of natural selection and sexual selection	146
5.1.2	Re-formulating the natural selection argument for sexual selection	148
5.1.3	Manifestations of sexual selection	151

5.2	Why are females usually the "limiting sex"?	152
5.2.1	Females usually invest more in reproduction	152
5.2.2	Does inter-sexual selection produce payoffs?	155
5.2.3	Does intra-sexual selection produce payoffs?	159
5.3	How mate choice based on ornaments increases female fitness	162
5.3.1	Genetic benefits in the runaway hypothesis: "Sexy sons"	162
5.3.2	Genetic benefits in the good genes hypothesis: Better survival	164
5.3.3	Benefits in the good resources hypothesis: Honest promises	166
5.4	Sex role reversal	166
5.4.1	Sex role reversal: Adjusting investments made by males and females	168
5.5	Not all intra-sexual competition involves fighting	170
5.5.1	Scrambles are a form of indirect competition	171
5.5.2	Endurance and subterfuge are also forms of indirect competition	172
5.5.3	Sperm competition	173
	Summary	175
	Further reading	176
6	MATING SYSTEMS	177
	Key themes	177
6.1	There are five major types of mating systems	179
6.2	Monogamy	181
6.2.1	Distinguishing among types of monogamy	181
6.2.2	Hypotheses for monogamy	184
6.3	Polygyny is the most common form of polygamy	188
6.3.1	Two models for polygyny	188
6.3.2	Human polygyny	191
6.4	The benefits for females of mating with multiple males	193
6.4.1	Non-monogamous females hedge their bets against infertility	195
6.4.2	Non-monogamous females reap genetic benefits	196
6.4.3	Non-monogamous females can reap direct benefits	201
6.5	Polyandry	204
6.5.1	Polyandrous mating systems are much less common than polygynous ones	204
6.6	Polygynandry	207
6.6.1	Reproductive skew	207
6.6.2	Cooperative breeding	209

6.7	Promiscuity	210
6.7.1	Factors associated with promiscuity	211
6.7.2	Scramble competitions are usually promiscuous mating systems	211
6.7.3	"Lek polygyny" is a promiscuous system resembling hook-up culture	212
	Summary	214
	Further reading	215
7	SEXUAL CONFLICT	217
	Key themes	217
7.1	Strategies for sexual success	219
7.1.1	A comment on terminology	220
7.1.2	Sexual strategies exist in the context of sexual conflict	221
7.2	Realms of sexual conflict	221
7.2.1	Sexual conflict before mating	223
7.2.2	Sexual conflict during mating	229
7.2.3	Sexual conflict after mating	234
7.2.4	Sexual conflict during parenting	237
7.3	Mating strategies can change with circumstances	239
7.3.1	Making the best of things	239
7.3.2	Life history theory argues for plastic mating strategies	244
7.3.3	Sex allocation	246
7.4	Same-sex parenting	248
	Summary	252
	Further reading	253
8	SEX DETERMINATION AND DIFFERENTIATION	255
	Key themes	255
8.1	Are male and female bodies the only two options in sex determination?	258
8.2	The familiar method of sex determination relies on X- and Y-chromosomes	261
8.2.1	Using insects to discover the role of sex chromosomes	261
8.2.2	The X- and Y-chromosomes in humans	265
8.2.3	Little genetic differences between men and women, but big phenotypic differences	265
8.2.4	The <i>SRY</i> gene and transcription	267
8.3	Not all genetic sex determination relies on the XY system	269
8.3.1	Genetic sex determination without Y-chromosomes	270
8.3.2	Are females ever the heterogametic sex?	270

8.3.3	Chromosomal sex determination where hermaphroditism is a phenotype	272
8.3.4	Genetic sex determination in honeybees	274
8.4	Environmental sex determination	276
8.4.1	Temperature is a non-social sex-determination system	277
8.4.2	Environmental sex determination can override genetic sex determination	281
8.4.3	Can mothers use temperature to select their offspring's sex?	281
8.4.4	Social systems of environmental sex determination	282
8.4.5	Anomalous sex determination caused by a member of a different species	284
8.4.6	Anomalous sex determination by ecotoxins	286
	Summary	287
	Further reading	287
9	HUMAN SEXUAL ANATOMY AND REGULATION	289
	Key themes	289
9.1	Human sexual differentiation and function is highly dependent on hormones	290
9.1.1	The endocrine system regulates hormones in the bloodstream	292
9.1.2	Major hormones that regulate sexual development, function, and behavior	294
9.2	Sex differentiation is part of development	297
9.2.1	Human sexual differentiation before birth	298
9.3	The male reproductive system	299
9.3.1	Further male differentiation during the prenatal period	299
9.3.2	Male sexual development at puberty	300
9.3.3	Sexual anatomy of the human adult male	301
9.4	The female reproductive system	306
9.4.1	Further female differentiation during the prenatal period	306
9.4.2	Female sexual differentiation at puberty	306
9.4.3	Sexual anatomy of the human adult female	307
9.5	Anomalous sexual phenotypes in humans	309
9.5.1	Consequences of anomalies in the sex chromosomes	310
9.5.2	Intersex conditions that result from dysfunctional alleles	312
9.5.3	When girls become men at puberty	313
9.6	Sex linkage: Why some genetic disorders occur mostly in males	314
9.7	Cancers of sexually differentiated organs and tissues	315
9.7.1	Cancers associated with male organs	318
9.7.2	Cancers associated with female organs	319
	Summary	321
	Further reading	322

10 HUMAN FERTILITY AND BIRTH	323
Key themes	323
10.1 Key differences between making sperm and eggs	324
10.1.1 Spermatogenesis occurs from puberty to old age	325
10.1.2 Oogenesis occurs from the fetal stage to menopause	327
10.2 The menstrual cycle	328
10.2.1 Most mammals have an estrous cycle instead	330
10.2.2 Is women's fertile period concealed?	331
10.3 Sexual arousal and response in men and women	333
10.4 Fertilization and the making of a zygote	336
10.4.1 Infertility	338
10.4.2 Contraception	340
10.5 Pregnancy	343
10.5.1 The placenta	344
10.5.2 Labor and delivery	345
10.6 Breast-feeding	349
10.7 Menopause	350
10.8 Sexually transmitted infections	352
10.8.1 A diversity of organisms cause STIs	354
10.8.2 Major bacterial STIs	354
10.8.3 Major STIs caused by viruses	355
10.8.4 Non-humans suffer sexually transmitted infections too	358
Summary	360
Further reading	361
 Glossary	 363
Index	395
