
Contents

Preface.....	xxvii
Author	xxix

Chapter 1	Microorganisms.....	1
	Systems.....	1
	Self-Organized Systems	1
	Life as Self-Organized Growth of Biomass	1
	Cells.....	2
	Organisms and Microorganisms	3
	Size of Microorganisms	3
	Biology	3
	Microbiology	3
	Environmental Microbiology	4
	Why Are Microbes Used in Environmental Engineering?.....	4
	Organisms of Importance in Environmental Microbiology.....	4
	Viruses.....	5
	Subviral Particles	6
	Importance of Viruses in Environmental and Civil Engineering.....	6
	Prokaryotes.....	6
	Bacteria and Archaea	7
	Importance of Prokaryotes in Environmental and Civil Engineering.....	7
	Fungi.....	8
	Importance of Fungi in Environmental and Civil Engineering.....	9
	Algae	10
	Importance of Algae in Environmental Engineering.....	10
	Protozoa.....	12
	Importance of Protozoa for Environmental Engineering	13
	Chapter 1 Quiz	13

Chapter 2	Static Biochemistry	15
	Static and Dynamic Biochemistry	15
	Chemical Features of Life.....	15
	Balance of Elements.....	15
	Covalent Bonds.....	16
	Organic Compounds and Functional Groups.....	16
	Polarity of Chemical Bonds	16
	Water	17
	pH of Solutions.....	17
	Intermolecular Forces.....	17

Hydrophobic Substances and Hydrophobic Forces	18
Stereoisomers	18
Biological Monomers and Polymers	18
Monosaccharides	20
Oligosaccharides and Polysaccharides	21
Lipids and Membranes	22
Lipid Membranes	22
Membrane Melting and Freezing	22
Amino Acids and Proteins	23
Structure of a Protein Molecule	23
Globular and Fibrous Proteins	27
Denaturation of Proteins	29
Enzymes	29
Coenzymes	29
Nucleotides	30
Cyclic Nucleotides	30
Oligonucleotides	31
DNA Structure	31
DNA Melting	32
DNA as a Carrier of Genetic Information	33
DNA Sequences and Sequencing	35
RNA	35
mRNA	36
tRNA	36
Genetic Code	36
rRNA and Translation	36
16S rRNA	37
Functions of rRNA in the Ribosome	37
miRNA	37
Summary of the Functions of Monomers and Polymers in a Cell	37
Chapter 2 Quiz	39

Chapter 3 Dynamic Biochemistry	41
Levels of Metabolism	41
Biochemical Reactions	41
Major Features of Enzymes	41
Mechanism of Enzymatic Catalysis	42
Specificity of Enzymes	42
Inactivation of Enzymes	42
Classification of Enzymes	42
Environmental Applications of Microbial Enzymes and Coenzymes	44
Coenzymes	44
Units of Enzymatic Activity	45
Control of Individual Biochemical Reactions	45

Effect of Noncompetitive Inhibitors on Enzymatic Activity	46
Effect of Competitive Inhibitors on Enzymatic Activity	46
Control of a Group of Biochemical Reactions	46
Regulation of Enzymatic Activity in the Sequence of Enzymes	47
Regulation of Enzyme Synthesis and Degradation	47
Metabolic Blocks	48
Control of Metabolic Blocks	49
Cyclic AMP and GMP as Whole-Cell Regulators of Metabolism	50
Temporal Control of Cell Metabolism	50
Nitric Oxide as Controller of Metabolism	50
Quorum Sensing	51
Control of Metabolism in the Biosphere	51
Chapter 3 Quiz	52
Chapter 4 Biooxidation and Bioreduction	53
Oxidation-Reduction	53
Oxidation Numbers	54
Oxidation of Carbon	55
Oxidation-Reduction during Fermentation	55
Energy	55
Two Sources of Biological Forms of Energy	56
Chemotrophy	56
Chemotrophic Oxidation-Reduction Reactions	57
Chemotrophy: Fermentation	57
Chemotrophy: Anaerobic (Anoxic) Respiration	58
Chemotrophy: Aerobic Respiration	58
Phototrophy	58
Oxygenic and Anoxygenic Phototrophic Oxidation-Reduction Reactions	58
Electron-Transfer Chain	59
Proton Motive Force	59
Oxidative Phosphorylation	60
Biological Forms of Energy	60
Production of Biological Energy in Photosynthesis	60
ATP Yield from Oxidative Phosphorylation	61
ATP Production and Yield from Fermentation	62
ATP Yield from Lithotrophy	63
Long-Term Energy Storage in Cells	63
Relation to Oxygen and Generation of Energy	63
Chapter 4 Quiz	64
Chapter 5 Biodegradation	67
Biodegradation and Biotransformation	67
Biochemical Reactions of Biodegradation	67
Aerobic, Anoxic, and Anaerobic Biodegradation	68

Biodegraded Substances.....	68
Biodegradation Rates of Natural Substances	68
Biodegradation Rates Correlate with Turnover Rates	68
Degradation of Storage Polysaccharides	68
Biodegradation of Structural Polysaccharides	69
Biodegradation of Hemicellulose and Pectin	70
Biodegradation of Cellulose	70
Biodegradation of Lignin	70
White-Rot Fungi.....	71
Biodegradation of Chitin	72
Degradation of Proteins	72
Degradation of Amino Acids	72
Degradation of Nucleic Acids	72
Degradation of Lipids.....	73
Biodegradation of Chemicals	73
Degradation of Aliphatic Hydrocarbons	73
Degradation of Aromatic Hydrocarbons	73
Biodegradation of Benzene, Toluene, Ethylbenzene, and Xylene	75
Bioremediation of Soil and Water Polluted by BTEX Chemicals	75
Xenobiotics.....	75
Degradative Plasmids	76
Biodegradation of Chlorinated Hydrocarbons	76
Products of Degradation of Aromatic Hydrocarbons	78
Nonbiodegradable and Biodegradable Polymers	79
Polylactic Acid and Polyhydroxyalkanoates	80
Chapter 5 Quiz	80

Chapter 6	Molecular Biology and Genetics	83
	Metabolic Blocks of Biosynthesis	83
	Energy for Biosynthesis.....	83
	Balance of Energy	83
	Excess of Biological Energy.....	84
	Number of Enzymes.....	84
	Genes.....	85
	Noncoding RNA Genes.....	85
	Chromosomes.....	85
	Genomes.....	85
	Genomes of Chloroplasts and Mitochondria.....	85
	The Genome in Comparison with a Book.....	85
	Flow of Genetic Information.....	86
	Genetics, Molecular Biology, Bioinformatics, and Epigenetics.....	86
	Collection of DNA Sequences.....	87
	Nucleus and Nucleoid.....	87
	Plasmids	87
	Transposons.....	88

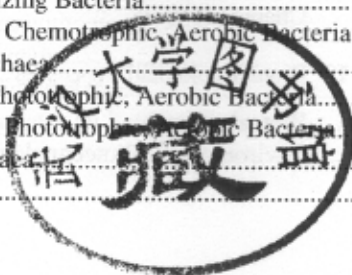

DNA Replication	88
Speed of DNA Replication	88
Transcription	89
Translation	89
Genetic Code	89
Genome Changes	89
Natural Genetic Recombination in Prokaryotes	90
Conjugation	90
Transformation	91
Transduction	91
Horizontal Gene Transfer	91
DNA Repair and Mutations	91
Chemical Mutagens	91
Physical Mutagens	91
Biological Mutagens	92
Genetic Adaptation of Microbial Population to Changed Environment	92
Chapter 6 Quiz	92
 Chapter 7 Bioagents of Environmental and Engineering Bioprocesses	95
Hierarchy of Life	95
Cell Aggregates	95
Microbial Communities and Ecosystems	95
Shapes of Individual and Connected Prokaryotic Cells	95
Prokaryotic Cell Shapes as Evolutionary Adaptation to Environment	97
Inner Structure of Prokaryotic Cells	97
Intracellular Inclusions in Prokaryotic Cells	97
Outer Components of Prokaryotic Cells	99
Cytoplasmic Membrane	99
Vulnerability of the Cytoplasmic Membrane	100
Prokaryotic Cell Walls	100
Origin of Gram-Negative Cells	100
Origin of Gram-Positive Cells	100
Flagella, Fimbriae, and Pili	101
Outer Membrane, Lipopolysaccharides, and S-Layer	101
Glycocalyx and Capsule	101
Anabiotic Prokaryotic Cells	102
Structure of Eukaryotic Cells	102
Organelles	102
Chapter 7 Quiz	103
 Chapter 8 Reproduction, Proliferation, and Growth	105
Reproduction of Viruses	105
Reproduction of Prokaryotes	105

Vegetative Reproduction of Microscopic Eukaryotes.....	105
Asexual and Sexual Reproduction of Microscopic Eukaryotes.....	107
Cell Growth and the Cell Division Cycle	107
Coordination of Cell Cycle Events	108
Periods of Exotrophy and Endotrophy in the Cell Cycle	108
Cell Differentiation	109
Growth and Proliferation of Cell Populations.....	109
Generation Time and Number of Generations	109
Specific Growth Rate	110
Stoichiometry of Microbial Growth.....	110
Cell Age and Cell Trophic State Distributions in Microbial Populations	111
Quantification of Microbial Biomass	112
Microscopic Enumeration	112
Flow Cytometry Enumeration.....	112
Physical Methods of Microbial Biomass Measurement.....	113
Chemical Methods of Microbial Biomass Measurement.....	113
Physiological Methods of Microbial Biomass Measurement.....	113
Biological Methods of Cell Enumeration: Plate Count.....	114
Biological Methods of Cell Enumeration: Most Probable Number Count	114
Enumeration of Cells and Viral Particles at Low Concentrations	115
Molecular-Biological Methods of Microbial Biomass Quantification	116
Chapter 8 Quiz	116
 Chapter 9 Microbial Ecology.....	 119
Ecosystems	119
Levels of Ecosystems	119
Ecosystem Boundaries	119
Boundaries of Unicellular Organisms	119
Boundaries of Multicellular Aggregates	120
Boundaries of Microbial Communities in Environmental Engineering Systems.....	121
Diversity of a Microbial Ecosystem	121
Quantification of Ecosystem Diversity.....	121
Diversity in an Anaerobic Digester.....	122
Types of Interactions in Microbial Ecosystems	122
Population Density Determines Interaction Type	123
Commensalism.....	123
Mutualism	124
Interactions of Microorganisms in Cellular Aggregates.....	126
Positive Interactions between Animals and Microorganisms.....	126

Symbiotic Mutualism	126
Positive Interactions between Plants and Microorganisms	127
Symbiosis of Plants and Microorganisms	127
Neutral Competition	127
Amensalism	127
Antagonism	128
Predation	128
Parasitism	128
Microbial Parasites of Plants	128
Microbial Parasites of Human and Animals	129
Effects of Nutrients on Biotic Elements	129
Effects of Nutrients on Yield	129
Effect of Starvation on Microorganisms	130
Effect of Oxygen on Biotic Elements	130
Anoxic Microorganisms	131
Effect of Temperature on Growth	131
Effect of pH on Growth	131
Effect of Osmotic Pressure on Growth	131
Natural Death of Microorganisms	132
Fate of Microorganisms Released into the Environment	132
Chapter 9 Quiz	132
 Chapter 10 Classification of Viruses and Microorganisms	 135
Biological Classification	135
Units of Biological Classification	135
Names of Species	135
Classification of Viruses	135
Groups of Viruses	136
Importance of Viruses for Environmental Engineering	136
Isolation and Collection of Microbial Strains	136
Microbial Collections	137
Classification of Microorganisms	137
Phenotypic Characteristics	138
Genotypic Classification	138
Phylogenetic Classification	138
G+C Content in DNA and Genotypic Classification	139
Comparison of the Steps in Phenotypic and Phylogenetic	
Identification of Strains	139
Phylogenetic Groups of Prokaryotes	139
Classification of Microscopic Fungi	141
Classification of Microscopic Algae	142
Classification of Protozoa	142
Chapter 10 Quiz	143
References	144

Chapter 11	Physiological Classification of Prokaryotes	145
	Physiology of Prokaryotes	145
	Three Types of Chemotrophic Energy Generation	145
	Three Types of Phototrophic Energy Generation	145
	Evolution of the Earth's Atmosphere and Prokaryotes	146
	Contradictions between rRNA-Based Phylogenetic Classification and Physiological Classification of Prokaryotes.....	146
	Absence of Predictive Power in rRNA-Based Phylogenetic Classification	147
	Parallelism in Evolution of Genes	147
	Periodic Table of Prokaryotes	147
	Origin of Prokaryotes in Aquatic, Terrestrial, and Extreme Environments	148
	Phototrophic Prokaryotes in the Periodic Table.....	149
	Reasons for Evolutionary Parallelism in the Periods of the Periodic Table of Prokaryotes	149
	Geological Synchronization of the Periods in the Periodic Table of Prokaryotes	150
	Practical Importance of the Periodic Table of Prokaryotes	151
	Chapter 11 Quiz	151
 Chapter 12	 Groups of Anaerobic Prokaryotes.....	 153
	The 24 Major Physiological Groups of Prokaryotes	153
	Gram-Negative (Aquatic) Chemotrophic Fermenting Bacteria	153
	Gram-Positive (Terrestrial) Chemotrophic Fermenting Bacteria.....	155
	Chemotrophic Fermenting Archaea	156
	Gram-Negative (Aquatic) Phototrophic Bacteria That Use Products of Fermentation as Electron Donors	156
	Gram-Positive (Terrestrial) Phototrophic Bacteria That Use Products of Fermentation as Electron Donors	156
	Phototrophic Archaea That Use Products of Fermentation as Electron Donors.....	156
	Chapter 12 Quiz	157
 Chapter 13	 Groups of Anoxic Prokaryotes.....	 159
	Gram-Negative (Aquatic), Chemotrophic, Anoxic Bacteria	159
	Dissimilatory Sulfate-Reducing Bacteria	159
	Iron-Reducing Bacteria	162
	Denitrifying Bacteria	163
	Gram-Positive (Terrestrial), Chemotrophic, Anoxic Bacteria	163
	Chemotrophic, Anoxic Archaea (Methanogens).....	164
	Gram-Negative (Aquatic), Phototrophic, Anoxic Bacteria.....	164
	Gram-Positive (Terrestrial), Phototrophic, Anoxic Bacteria.....	165

Phototrophic Archaea That Use Products of Anoxic Respiration as Electron Donors	165
Chapter 13 Quiz	166
Chapter 14 Groups of Microaerophilic and Facultative Aerobic/Anaerobic Prokaryotes.....	167
Evolutionary Adaptations of Facultative Aerobic/Anaerobic and Microaerophilic Prokaryotes.....	167
Gram-Negative (Aquatic), Chemotrophic, Facultative Aerobic/Anaerobic Bacteria.....	167
Gram-Negative (Aquatic), Chemotrophic, Microaerophilic Bacteria.....	170
Gram-Positive (Terrestrial), Chemotrophic, Facultative Aerobic/Anaerobic and Microaerophilic Bacteria.....	171
Chemotrophic, Facultative Aerobic/Anaerobic and Microaerophilic Archaea	171
Gram-Negative (Aquatic), Phototrophic, Facultative Aerobic/Anaerobic and Microaerophilic Bacteria.....	171
Gram-Positive (Terrestrial), Phototrophic, Facultative Aerobic/Anaerobic and Microaerophilic Bacteria.....	172
Phototrophic, Facultative Aerobic/Anaerobic and Microaerophilic Archaea	172
Chapter 14 Quiz.....	172
Chapter 15 Groups of Aerobic Prokaryotes.....	173
Functions of Aerobic Prokaryotes.....	173
Pseudomonads and Their Relatives.....	173
Slime-Producing Bacteria	173
Phosphate-Accumulating Bacteria	175
Nitrogen-Fixing Bacteria.....	175
Methanotrophs.....	175
Oligotrophs.....	175
Bacterial Parasites of Bacteria	176
Rhizobia	176
Gram-Negative, Chemotrophic, Aerobic Pathogens	176
Ammonium-Oxidizing Chemolithotrophs (Nitrifying Bacteria).....	177
Sulfur-Oxidizing, Chemolithotrophic Bacteria.....	178
Iron- and Manganese-Oxidizing Bacteria.....	179
Gram-Positive (Terrestrial), Chemotrophic, Aerobic Bacteria	179
Chemotrophic, Aerobic Archaea.....	180
Gram-Negative (Aquatic), Phototrophic, Aerobic Bacteria.....	180
Gram-Positive (Terrestrial), Phototrophic, Aerobic Bacteria.....	181
Phototrophic, Aerobic Archaea.....	181
Chapter 15 Quiz	181

Chapter 16 Public Health and Water Disinfection.....	183
Saprophytic, Pathogenic, and Opportunistic Microbes.....	183
Parasites of Humans and Animals	183
Stages of Infectious Disease.....	183
Transmission of Infection.....	183
Patterns and Extent of Infectious Disease.....	184
Cooperation between Epidemiologists and Civil Engineers.....	184
Infections via Vectors.....	184
Factors of Microbial Pathogenicity	185
Exotoxins.....	185
Enterotoxins	185
The Problem of Opportunistic Bacteria in Environmental Biotechnology.....	185
Waterborne Pathogens.....	186
Detection of Waterborne Pathogenic Viruses	186
Waterborne Pathogenic Bacteria	186
Fate of Pathogens Released into the Environment.....	186
Waterborne Pathogenic Protozoa	187
Indicator Microorganisms.....	187
Coliforms as Indicators of Fecal Pollution.....	188
Other Indicators of Fecal Pollution.....	188
Bacteriological Quality of Water.....	188
Protozoan and Viral Pathogens	188
Detection of Pathogens in the Environment.....	189
Removal and Killing of Pathogens.....	189
Control of Microbial Death in Water	189
Thermal Treatment of Water.....	190
Pasteurization and Sterilization	190
Sterilization by Electromagnetic Radiation	190
Sterilization by Filtration	191
Conservation.....	191
Disinfectants and Antiseptics.....	191
Antibiotics	191
Disinfection	191
Resistance of Different Microbial Groups to Disinfection	192
Comparison of Chemical Disinfectants	192
UV Disinfection of Water	193
Chemical Interference with Disinfection of Water	193
Physical Interference with Disinfection of Water	193
Chapter 16 Quiz.....	193
Chapter 17 Biotechnological Processes.....	195
Biotechnology.....	195
Environmental Biotechnology.....	195

Comparison of Biotechnological Treatment with Other Methods	195
Applicability of Environmental Biotechnology	196
Combination of Biotechnology with Other Methods	196
Bioprocesses Used in Environmental Biotechnology	197
Stages of Biotechnological Processes	197
Upstream Processes in Environmental Biotechnology	197
Pretreatment in Biotechnology	197
Medium Preparation	198
Medium Components	198
Preparation of Equipment	198
Preparation of Inoculum	199
Core Process in Environmental Biotechnology	199
Semi-Closed and Open Systems of Cultivation	199
Batch Culture	200
Continuous Cultivation	200
Chemostat	200
Plug-Flow Systems	201
Suspended Biomass Bioreactors	202
Continuous Systems with Internal Recycling or Retention of Biomass	202
Microbiological Methods Used in Environmental Engineering	203
Isolation of Pure Cultures	204
Selection of Microorganisms	204
Theoretical Selection	205
Selection of an Enrichment Culture	205
Selective Pressure	205
Autoselection Mechanisms	205
Instability of Autoselected Features	206
Selection of an Ecosystem	206
Construction of Genetically Engineered Microorganisms	206
Steps for Artificial Recombination of DNA	207
Application of Genetic Engineering in Environmental Engineering	207
Physical Boundary of an Artificial Ecosystem	207
Chemical Boundary of an Artificial Ecosystem	208
Macro- and Microenvironments	208
Effect of Nutrients on Growth Rate	208
Downstream Processes	208
Microbial Aggregates	209
Structure of Microbial Aggregates	209
Sedimentation of Cellular Aggregates	209
Selection of Microbial Aggregates by Settling Time	210
Chapter 17 Quiz	210

Chapter 18 Aquatic Systems and Water Biotreatment.....	213
Microorganisms of the Hydrosphere, Lithosphere, and Atmosphere.....	213
Functions of Microorganisms in the Hydrosphere.....	213
The Biogeochemical Carbon Cycle.....	214
The Biogeochemical Nitrogen Cycle.....	214
The Biogeochemical Phosphorus Cycle.....	215
The Biogeochemical Sulfur Cycle	215
The Biogeochemical Iron Cycle.....	216
Stratification in Aquatic Ecosystems	217
Sources of Water Pollution.....	217
Eutrophication of Water in Reservoirs.....	218
Signs of Eutrophication	218
Treatment of Storm Water in Artificial (Constructed) Wetlands	219
Stages of Treatment of Raw Drinking Water.....	219
Pollutants of Water That Can Be Removed by Biotreatment.....	219
Biological Instability of Water	220
Chemical Removal of Sources of Biological Instability	221
Biological Removal of Sources of Biological Instability	221
Disadvantages of Bioremoval of Sources of Biological Instability.....	221
BOM in Water	221
Chemical Oxygen Demand, Biological Oxygen Demand, and Total Organic Carbon.....	222
Measurement of BOM.....	222
Bioremoval of Sources of Biological Instability	223
Fixed-Bed Biofilters	223
Fluidized-Bed Biofilm Reactors.....	224
Biofiltration of Water through Soil.....	224
Organic Micropollutants of Water	224
Bioremoval of Endocrine Disruptors from Water.....	225
Bioremoval of Petroleum Hydrocarbons and Their Derivatives from Water.....	225
Bioremoval of Halogenated Compounds from Water.....	226
Saccharose in Water.....	227
Taste and Odor Compounds of Microbial Origin	227
Arsenic in Water.....	228
Nitrate and Nitrite in Water.....	228
Heterotrophic Denitrification of Drinking Water	228
Autotrophic Denitrification	229
Conditions for Denitrification	229
Bioreduction of Perchlorate in Drinking Water	230
Iron and Manganese in Water	230
Chapter 18 Quiz.....	230
References.....	232

Chapter 19	Anaerobic and Anoxic Treatment of Wastewater	233
	Oxygen and Energy Generation	233
	Anaerobic Digestion of Organic Matter	233
	Microbiology of Anaerobic Digestion of Biopolymers	234
	Biogas Collection and Use	235
	Optimal Conditions for Anaerobic Digestion of Organic Waste	236
	Interaction between Methanogenesis and Sulfate Reduction	236
	Comparison of Anaerobic and Aerobic Digestion of Organic Waste	236
	Bioreactors Used in Anaerobic Wastewater Treatment	237
	Stirred Tank Reactors for Anaerobic Digestion of Organics	237
	UASB Reactors	237
	Septic Tanks	238
	Anaerobic Processes in Landfills	238
	Anaerobic Degradation of Xenobiotics by Fermenting Bacteria	238
	Anoxic Bioprocesses	238
	Nitrate Reduction in Water and Wastewater Treatment	239
	Nitrate Reduction in Microbially Enhanced Oil Recovery	239
	Nitrate Reduction in Soil Bioremediation	240
	Nitrate Reduction in Geotechnical Improvement of Soil	240
	Iron Reduction in Water, Wastewater, and Groundwater Treatment	240
	Sulfate Reduction in Water and Wastewater Treatment	241
	Dehalogenating Bacteria	242
	Combined Anaerobic/Aerobic Biotreatment of Wastes	242
	Biotechnological Treatment of Heavy Metal-Containing Waste and Radionuclide-Containing Waste	243
	Chapter 19 Quiz	244
Chapter 20	Aerobic Treatment of Wastewater	247
	Domestic Wastewater	247
	Industrial Wastewater	247
	Aeration	247
	Objectives of Aerobic Wastewater Biotreatment	247
	Aerobic Treatment of Wastewater	248
	Conventional Biotreatment in Aerobic Tanks	248
	Organic Load of Aerobic Treatment	249
	Activated Sludge Settleability	249
	Activated Sludge Recycling	250
	Microorganisms of Activated Sludge	251
	Flocs of Activated Sludge	251
	Filamentous Bacteria in Activated Sludge Flocs	251
	Control of Filamentous Bulking of Activated Sludge	252
	Foaming	252

Suspended Microbial Aggregates (Granules) Used in Aerobic Treatment of Wastewater.....	253
Removal of Nutrients from Wastewater.....	254
Aerobic Reactors.....	255
Aerobic Treatment of Wastewater with Low Concentrations of Hazardous Substances.....	256
Aerobic Digestion of Activated Sludge.....	256
Combinations of Aerobic Treatment of Wastewater with Other Treatments.....	256
Application of Microaerophilic Microorganisms in Biotechnological Treatments.....	257
Aerobic Biofilm Reactors.....	257
Development of Biofilm in Aerobic Biofilm Reactors.....	258
Chapter 20 Quiz.....	258
Chapter 21 Value-Added By-Products of Environmental Engineering.....	261
Organic Wastes as Raw Material for Biotechnological Transformation.....	261
Biotechnological Products from Organic Wastes.....	261
Production of Enzymes from Wastes.....	261
Production of Organic Acids.....	264
Production of Flavors.....	265
Production of Polysaccharides.....	265
Edible Mushroom Production.....	265
Production of Biodegradable Plastics.....	266
Production of Animal Feed.....	266
Use of Organic Waste for the Production of Fungi for Soil Bioremediation.....	266
Solid-State Fermentation of Agricultural and Food Processing Wastes.....	267
Production of Fuel Ethanol.....	267
Production of Hydrogen, Methane, and Biodiesel.....	268
Production of Organic Fertilizer.....	268
Biorecovery of Metals from Mining and Industrial Wastes.....	268
Recovery of Phosphate and Ammonia.....	269
Chapter 21 Quiz.....	269
Chapter 22 Biotreatment of Industrial Hazardous Wastes.....	271
Electron Donors and Acceptors in Biotreatments.....	271
Energetic Efficiency of Biooxidation–Bioreduction.....	271
Aerobic Treatment of Xenobiotics.....	271
Secondary Hazardous Waste.....	272
Treatment of Wastewater with Low Concentrations of Hazardous Substances.....	272

Biodegradation Using Co-oxidation/Cometabolism	272
Combination of Aerobic Treatment with Other Treatments	272
Biotreatment of Hazardous Waste by Anaerobic Fermenting	
Bacteria.....	273
Landfilling of Hazardous Solid Waste	273
Combined Anaerobic/Aerobic Biotreatment of Hazardous	
Industrial Waste.....	273
Optimization of Hazardous Waste Biodegradation.....	274
Optimal Temperatures for Biodegradation of Hazardous Waste	274
Optimal pH for Biodegradation of Hazardous Waste	275
Enhancement of Biodegradation by Nutrients	275
Enhancement of Biodegradation by Growth Factors	276
Increase of Bioavailability of Contaminants.....	276
Enhancement of Biodegradation by Enzymes	276
Enhancement of Biodegradation by Aeration and Oxygen Supply.....	276
Enhancement of Biodegradation by Oxygen Radicals.....	277
Enhancement of Biodegradation by Electron Acceptors Other	
Than Oxygen	277
Bioenhancement of the Treatment of Hazardous Waste	278
Application of Acclimated Microorganisms.....	278
Selection and Use of Pure Cultures.....	278
Construction of Microbial Communities	279
Construction of Genetically Engineered Microorganisms.....	279
Environmental Engineering Applications of Recombinant	
Strains of Microorganisms	280
Application of Microbial Aggregates and Immobilized	
Microorganisms.....	280
Chemical Gradients in Microbial Aggregates.....	280
Chapter 22 Quiz	281
 Chapter 23 Solid Wastes and Soil Biotreatment	 283
Solid Wastes	283
Treatment of Solid Wastes.....	283
Landfills	283
Biological Reactions of Decay in Landfills.....	284
Sewage Sludge Processing	284
Composting	285
Microbiology of Composting	285
Bulking Agents.....	286
Types of Composting Systems	286
Optimal Parameters for Composting	287
Composting a Mixture of Wastes.....	288
Vermicomposting	289
Scale of Composting	289
Public Health Aspects of Composting	289

Odor Control in Composting.....	289
Composting of Hazardous Organic Wastes	290
Soil.....	290
Organic Matter in Soil.....	290
Microbial Activity and Soil.....	290
Soil and the Biodegradation of Xenobiotics.....	291
Toxic Pollutants of Soil	291
Sources of Soil Pollution	291
Leakage from Underground Storage Tank Facilities	292
Landfill Leachate	292
Bioremediation	292
Soil and Groundwater Bioremediation.....	292
Landfarming, Land Treatment, and Plant Bioremediation	292
Onsite and <i>In Situ</i> Soil and Groundwater Bioremediation	293
Excavation and Composting of Contaminated Soil	293
Slurry-Phase Bioremediation in Bioreactors.....	293
Gas Cleaning.....	294
Pretreatment of Contaminated Soil.....	294
Steps in Microbial Culture Development for Slurry-Phase Bioremediation	294
Advantages of Soil Bioremediation.....	294
Disadvantages of Soil Bioremediation	295
Bioremediation and Biodecontamination of Construction Sites through Biocementation	295
Artificial Protective Geochemical Barrier.....	296
Chapter 23 Quiz	296
 Chapter 24 Construction Biotechnology	 299
Introduction	299
Bioagents Used in Construction Biotechnology.....	299
Construction Biotechnology Methods.....	299
Microbial Biogeotechnics.....	300
Reasons for Microbial Applications in Geotechnical Engineering	300
Major Applications of Microorganisms for Ground Improvement.....	300
Bioclogging	302
Biocementation.....	302
Chemical Grouting.....	302
Biogrouting	302
Microbial Processes for Bioclogging with Organic Material	302
Microbial Processes for Bioclogging with Inorganic Material	303
Clogging with Microbial Polysaccharides	303
Bacteria That Produce Clogging Polysaccharides	303
Clogging with Microbially Induced Precipitates	304
Biobinding	304

Microbial Processes of Bioclogging and Biocementation with	
Inorganic Compounds	304
Microbially Induced Calcium Carbonate Precipitation	305
Geotechnical Applications of Biocementation.....	306
Problems of Microbial Cementation and Clogging.....	306
Physiological Grouping of Chemotrophic Prokaryotes.....	306
Screening of Microorganisms for Bioclogging and Biocementation...	307
Application of Anaerobic Fermenting Bacteria in Biogeotechnics....	308
Application of Anoxic Bacteria in Biogeotechnics.....	308
Application of Facultative Anaerobic Bacteria in Biogeotechnics	308
Application of Microaerophilic Bacteria in Biogeotechnics.....	309
Application of Aerobic Bacteria in Biogeotechnics.....	309
General Considerations on Bacterial Applicability in	
Geotechnics.....	309
Biosafety in Biogeotechnics.....	309
Soil Biotreatment Procedures.....	310
Biocement and BiogROUT Production Biotechnologies.....	310
Inoculum for Biotreatment of Soil	310
Use of Indigenous Microorganisms in Soil for Biocementation	311
Medium for Microbial Cultivation	311
Soil Biotreatment	312
Microbial Admixtures.....	312
Construction Bioplastics.....	313
Chapter 24 Quiz	314
Chapter 25 Microbiology of Air and Air Treatment.....	317
Bioaerosols	317
Sources of Bioaerosols	317
Viral Aerosols	317
Bacterial Aerosols	317
Fungal Aerosols.....	318
Mycotoxins	318
Pollen Grain Aerosols	318
Concentration of Aerosols.....	318
Bioaerosol Sampling	319
Bioaerosols and Indoor Air Quality	319
Fate of Bioaerosols in the Environment	319
Bioaerosols from Wastewater Treatment, Spray Irrigation, and Biotechnological Plants	319
Odors Generated by Wastewater Treatment Plants.....	320
Treatment of Odorous and Exhaust Gases	320
Aerobic Biotechnological Treatment of Hazardous Waste Gas	321
Biotreatment of Toxic Gas.....	321
Chapter 25 Quiz	321

Chapter 26	Biodeterioration, Biocorrosion, and Biofouling	323
	Microbial Biodeterioration	323
	Deterioration of Cultural Heritage	323
	Microbially Influenced Corrosion	324
	Microbial Formation of Acids	325
	Biofouling of Membranes	326
	Membrane Treatments of Water and Wastewater	326
	Mechanisms of Membrane Fouling	326
	Types of Foulants	327
	Fouling Control	327
	Chapter 26 Quiz	327
Chapter 27	Outline and Summary of the Course "Environmental Microbiology for Engineers"	329
	Microorganisms	329
	Static Biochemistry	330
	Dynamic Biochemistry	330
	Biooxidation and Bioreduction	331
	Biodegradation	331
	Molecular Biology and Genetics	332
	Bioagents of Environmental and Engineering Bioprocesses	332
	Reproduction, Proliferation, and Growth	333
	Microbial Ecology	335
	Classifications of Viruses, Prokaryotes, and Eukaryotes	336
	Physiological Classification of Prokaryotes	336
	Groups of Prokaryotes	337
	Public Health and Water Disinfection	338
	Biotechnological Processes	340
	Aquatic Ecosystems and Water Treatment	341
	Anaerobic and Anoxic Wastewater Treatment	341
	Aerobic Wastewater Treatment	342
	Value-Added By-Products of Environmental Engineering	343
	Solid Waste Biotreatment	343
	Soil Bioremediation	343
	Construction Biotechnology	344
	Microbiology of Air and Air Treatment	345
	Biodeterioration, Biocorrosion, and Biofouling	345
Chapter 28	Tutorials	347
	Tutorial 1: Microorganisms: Cell Size and Shape	347
	Tutorial 2: Cell Chemistry and Structure	352
	Tutorial 3: Metabolism and Biodegradation	353
	Tutorial 4: Growth and Ecology	357
	Tutorial 5: Anaerobic Processes	362

Tutorial 6: Aerobic Processes.....	367
Tutorial 7: Solid Waste Biotreatment	370
Tutorial 8: Construction Biotechnology	374
Chapter 29 Exam Question Bank.....	377
Index.....	401
