Preface

ix

1 Overview of Cell Culture Processes

An Introduction to Cell Culture: A Historical Perspective	2
Cell Culture as Process Technology	6
Industrial Cell Lines	16
Other Production Systems	19
Manufacturing	21
Upstream Process	21
Product Quality in Cell Culture Processing	25
Quality of the Product	25
From Discovery to Clinical Products	30

2 Cell Biology for Bioprocessing

Introduction	38
Tissue Cells and Their Isolation	39
Cell Membrane	45
Cytoplasm and Organelles	50
Protein Secretion through the ER and Golgi Apparatus	57
Transport across Cellular Membranes	62
Cell Shape, Mechanics, and Movement	68
Growth Control	75
Concluding Remarks	83

3 Cell Physiology

Introduction	86
Glucose and Energy Metabolism	87
Regulation of Glucose Metabolism	101
Transport and Transporters	108
Metabolic Homeostasis and Lactate Consumption	112
Amino Acid Metabolism	119

Lipid Metabolism	122
Glycan Biosynthesis and Protein Glycosylation	126
Concluding Remarks	138

4 Product Quality and Process

Introduction	142
Quality of Protein Product	145
Structural Homogeneity of the Product	150
Biological Activities	158
Quality by Design (QbD) of Cell Culture Products	160
QTPP and CQAs	162
Quality Risk Management	168
Design Space and Control Strategy	172
QbD in Different Stages of the Product's Life Cycle	177
Concluding Remarks	180

5 Stoichiometry and the Kinetics of Cell Cultivation

Introduction	184
Material Conversion in Cell Culture	185
Material Balance on Cell Growth	190
Kinetic Description of Cell Growth & Product Formation	193
Kinetic Model of Cell Growth	198
Modeling Productivity	200
Modeling a Cell Culture System	201
Concluding Remarks	204

6 Cell Line Development

Introduction	208
Transient Production vs. Stable Expression Cell Line	209
Host Cells	210
Generating a Recombinant Protein High-Producing Cell Line	213
Concluding Remarks: Genomic Technology & Cell Line Development	235

7 Medium Design for Cell Culture Processing

Introduction	240
Types of Media and Classes of Medium Components	243
Process Medium Design: Kinetics, Stoichiometry, Omics & Optimization	248
Components of Basal Medium	254
High Molecular Weight and Complex Supplements	272
Concluding Remarks	276

8 Cell Culture Bioreactors

Introduction	280
Basic Types of Bioreactors	281
Tissue Culture and Disposable Cell Culture Systems	286
Adherent Cell Support Systems	290
Bioreactors Developed for Cell Culture	295
Concluding Remarks	302

9 Fed-Batch Culture Processes

Introduction	306
Batch Cultures	309
Fed-Batch Cultures	310
Stoichiometric Feeding	315
Delivery of Feed Medium	318
Product Quality in Fed-Batch Culture	320
Concluding Remarks	323

10 Continuous Cell Culture Processes

Introduction	328
Analysis of Continuous Culture and Steady State	330
Methods of Cell Retention	340
Continuous Culture & Continuous Process	346
Concluding Remarks	348

11 Oxygen Transfer in Cell Culture Bioreactors

Introduction	352
Oxygen Concentration across the Gas-Liquid Interface	353
Oxygen Transfer at the Gas-Liquid Interface	356
Damage to Cells by Gas Sparging	365
Oxygen Transfer in Aggregates and Membrane Bioreactors	368
Concluding Remarks	371

12 Scaling Up and Scaling Down for Cell Culture Bioreactors

Introduction	376
Mechanical Agitation	378
Power Consumption for Mixing Tanks	380
Mixing Time	388
Scaling Up and Mechanical Forces on Cells	392
Oxygen and Carbon Dioxide Transfer	394
Process Scale-Up and Scale-Down Models	403
Concluding Remarks	405

Appendix A: Cell Culture Process Data Analysis

Overview of Process Data	410
Data Processing Pipeline	413
Metabolic Flux Analysis	418
Time Series Data Analysis	424
Aggregation and Analysis of Process Data	427
Concluding Remarks	430
<i>Index</i>	437
