Acknowledgments.....	ix
Authors.....	xi
Introduction.....	xiii
Chapter 1 Photosynthesis.....	1
1.1 General Description of Photosynthesis.....	1
1.1.1 PSII Antenna Complex.....	5
1.1.2 Photosynthetic Pigments of Higher Plants.....	6
1.1.3 Photosystem II (PSII).....	9
1.1.4 Cytochrome b_6f Complex.....	10
1.1.5 Photosystem I (PSI).....	10
1.1.6 ATP Synthase.....	11
1.2 Light Phase of Photosynthesis.....	12
1.2.1 Absorption of Photosynthetically Active Radiation (PAR).....	12
1.2.2 Transport of Electrons and Non-Cyclic Phosphorylation.....	13
1.2.3 Cyclic Transport of Electrons and Cyclic Photophosphorylation.....	17
1.2.4 Pseudocyclic Transport of Electrons and Pseudocyclic Photophosphorylation.....	18
References.....	19
Chapter 2 Fluorescence of Chlorophyll <i>a</i>	23
2.1 Chlorophyll <i>a</i> Fluorescence as an Indicator of PSII Performance.....	24
2.2 Chlorophyll <i>a</i> Fluorescence Induction Curve.....	27
2.3 Techniques for Measuring Chlorophyll <i>a</i> Fluorescence.....	30
2.3.1 Direct Fluorescence of Chlorophyll <i>a</i>	30
2.3.2 Modulated Chlorophyll <i>a</i> Fluorescence.....	31
References.....	33
Chapter 3 JIP (OJIP) Test.....	37
3.1 Parameters in JIP (OJIP) Test.....	39
3.2 Data Derived Indirectly from JIP Test.....	39
3.3 Fluorescence Parameters Derived from Measured Data.....	40
3.4 Specific Energy Fluxes per Q_A -Reduced PSII Reaction Center.....	41
3.5 Yields or Energy Flux Ratios.....	41

3.6	Phenomenological Energy Fluxes per Excited Cross-Section (CS) of a Sample.....	42
3.7	Performance Indices at $t=0$ and Density of Active PSII Reaction Centers.....	43
3.8	Driving Forces (Logarithms of Performance Indices at $t=0$)	43
3.9	Overall Grouping Probability.....	43
3.10	Structure and Function Indices	44
3.11	Association of OJIP Fluorescence Kinetics with Measurements of Light Scattering at 820 nm Wavelength	44
	References	53
Chapter 4	Delayed Fluorescence in Photosynthesis.....	57
4.1	Basics of Delayed Light Emission by Plants	57
4.1.1	Mechanism of DF Quanta Generation	58
4.1.2	Decay Kinetics of Delayed Fluorescence	62
4.1.3	Induction Kinetics of Delayed Fluorescence	66
4.2	Analysis of Relationship between Delayed and Variable Chlorophyll a Fluorescence.....	70
4.3	Methods for Recording Delayed Fluorescence	73
	References	77
Chapter 5	Pulse-Amplitude Modulated (PAM) Fluorescence Measurements ...	83
5.1	Rationale for the Saturation Pulse Method	84
5.2	Interpretation of the Saturation Pulse Method with the Use of Mathematical Models.....	85
5.2.1	Processes Affecting Fluorescence Emission in Terms of Their Rate Constants	86
5.2.2	Sensitivity Factor S	87
5.2.3	PSI Fluorescence	89
5.3	Parameters Derived from Pulse-Amplitude Measurements....	91
5.3.1	Directly Measured Basic Parameters.....	91
5.3.1.1	Basal Fluorescence F_0	92
5.3.1.2	Maximum Fluorescence F_M	94
5.3.1.3	Variable Fluorescence F_V	95
5.3.1.4	Steady-State Fluorescence F'_s	95
5.3.1.5	Minimum Fluorescence in Light-Exposed Samples, F'_0	96
5.3.1.6	Maximum Fluorescence in Light-Exposed Samples, F'_M	98
5.3.2	Parameters of Quenching Analysis	100
5.3.2.1	Photochemical Quenching of Variable Fluorescence q_P , q_L	100

	5.3.2.2	Non-Photochemical Quenching of Variable Fluorescence, q_N	102
	5.3.2.3	Non-Photochemical Quenching of Maximum Fluorescence, NPQ.....	103
	5.3.2.4	Fractions of Non-Photochemical Quenching.....	104
	5.3.3	Parameters of Energy Partitioning.....	106
	5.3.3.1	Rationale of Energy Partitioning.....	106
	5.3.3.2	Maximum Quantum Yield of PSII Photochemistry, Φ_{Po} , F_v/F_M	106
	5.3.3.3	Maximum Quantum Yield of Basal Non-Photochemical Energy Losses, Φ_{No} , F_o/F_M	108
	5.3.3.4	Maximum PSII Quantum Yield in a Light-Adapted Sample, Φ_p , F_v'/F_M'	109
	5.3.3.5	Efficient Quantum Yield at a Given Light Intensity.....	111
	5.3.3.6	Quantum Yield of Non-Light-Induced Energy Losses.....	111
	5.3.3.7	Quantum Yield of Light-Induced Energy Losses.....	113
	5.3.4	Electron Transport Rate (ETR_{PSII}).....	114
	5.3.4.1	Theoretical Definition and Calculation	114
	5.3.4.2	Physiological Meaning and Application	115
	5.3.4.3	Limitations and Possible Errors in Estimations of Electron Transport Rate ...	119
	5.3.5	Summary of the Parameters.....	122
5.4		Most Useful Measurement Protocols Based on PAM Method.....	122
	5.4.1	Single Saturation Pulse Applied to a Dark-Adapted Sample (F_v/F_M Measurement).....	122
	5.4.2	Simple Dark-to-Light Slow Fluorescence Induction.....	124
	5.4.3	Measurements of Samples Not Adapted to Dark (Φ_{PSII} Measurement).....	124
	5.4.4	Slow Induction Curve and Recovery.....	125
	5.4.5	Light Response Curves.....	128
	5.4.6	Relative Fluorescence Decrease.....	130
5.5		Special Applications of PAM Method.....	132
	5.5.1	Chlorophyll Fluorescence Imaging.....	132
	5.5.2	On-Site Long-Term Monitoring of Fluorescence Parameters.....	134
	5.5.3	Measurement of Fluorescence Parameters under Multicolor Excitations.....	136
	5.5.4	Simultaneous Measurements of PAM and Other Signals.....	137

5.5.4.1	Chlorophyll Fluorescence Measured Simultaneously with Photosynthetic Gas Exchange	137
5.5.4.2	Simultaneous Measurements of PSI Transmittance and Chlorophyll Fluorescence	140
5.5.5	Risks Associated with Multiple Saturation Pulse Methods	144
	References	145
Chapter 6	Application of Chlorophyll <i>a</i> Fluorescence in Plant Research	163
6.1	Light Stress	164
6.2	Temperature Stress	171
6.3	Water Stress	181
6.3.1	Drought	181
6.3.2	Flooding Stress	191
6.4	Salinity Stress	192
6.5	Stress Caused by Heavy Metals	195
6.6	Nutrient Deficiency	201
	References	204
