Preface ix

About the Authors xi

PART I FUNDAMENTALS OF MICROBIAL LIFE 1

- 1 A Microbial Planet 2
- 2 Prokaryotic Cell Exterior: Envelopes and Appendages 24
- 3 Prokaryotic Cell Interior 58
- 4 Microbial Cell Growth and Division 82
- 5 Microbial Metabolism 114
- 6 Bioenergetics of Fueling 132
- 7 Synthesis of Building Blocks 164
- 8 Building Macromolecules 206
- 9 Building the Cell Envelope 242
- 10 Inheritance and Information Flow 268
- 11 Coordination of Cell Processes 304
- 12 Succeeding in the Environment 332
- 13 Differentiation and Development 364

PART II MICROBIAL DIVERSITY 389

- 14 *Bacteria* and *Archaea* 390
- 15 The Fungi 420
- 16 Protists 436
- 17 The Viruses 460
- 18 Viral Latency 490

PART III MICROBIAL ECOLOGY 515

- 19 Microbial Communities 516
- 20 Cycles of Elements 556
- 21 Microbial Interactions 584

PART IV MICROBIAL PATHOGENESIS 621

- 22 Infection: The Vertebrate Host 622
- 23 Opportunistic Infections by Microbiota: MRSA 652
- 24 Intracellular Pathogens: *Listeria* and *Mycobacterium* 672
- 25 Herpes: An Ancient Human Virus Prevails 696
- 26 Toxins and Epidemic Cholera: Phage Giveth, and Phage Taketh Away 712
- 27 Zoonoses: How Plague Emerged from a Foodborne Illness 730

PART V PUTTING MICROBES TO WORK 747

- 28 A Past, a Present, and a Future with Microbes 748

Coda 773

Glossary 775

Index 807
