About the Authors xvii

Introduction 1

The scientific method 1

Experimental design 4

Big data 6

Documentation 7

Safety 8

challenge One

Identifying the bacteria causing infections in hospital patients 15

QUESTIONS BEFORE YOU BEGIN THE CHALLENGE 15

Lab One

BACKGROUND 17

Diversity and pure cultures 17

Bright-field and phase-contrast microscopy 19

Learning outcomes 22

I: Isolate bacteria from a mixed culture: 22

PROCEDURE: Streaking for isolated colonies 23

II: Examine bacterial cells under the microscope 26

PROCEDURE: Making a wet mount 27

PROCEDURE: Using the microscope 28

Preparation for next lab 29

QUESTIONS 29

Lab Two

BACKGROUND 31

Colony morphology and optimum temperature for growth 31

Cell shape and bacterial spores 35

The cell envelope 38

Learning outcomes 42

I: Describe the colony morphology of the unknown 42

II: Describe the characteristics of an individual cell viewed under the microscope. 43

III: Determine the optimum temperature for growth 43

IV: Determine if the unidentified microorganism is Gram positive or Gram negative. 43

PROCEDURE: Doing a Gram stain 46

Preparation for next lab 48

QUESTIONS 48

Lab Three

BACKGROUND 49

Modes of energy generation in bacteria 49

Learning outcomes 54

I: Can the unidentified microorganism grow in the presence of bile salts and ferment lactose? 54

PROCEDURE: Streaking cells on MacConkey-lactose plates 55

II: Can the unidentified microorganism ferment glucose? 55

PROCEDURE: Glucose fermentation test 56

III: Does the unidentified microorganism use cytochrome *c* during respiration (Gram-negative bacteria)? 57

PROCEDURE: Oxidase test 59

IV: Does the microorganism make catalase (Gram-positive bacteria)? 59

PROCEDURE: Catalase test 60

V: Is the microorganism motile? 60

PROCEDURE: Soft agar motility assay 61

QUESTIONS 61

Solving Challenge One 63

Preparing for Challenge Two 63

Challenge One Questions 66

BIBLIOGRAPHY 66

challenge Two

Confirming the identification of a microorganism by sequencing the 16S rRNA gene 69

QUESTIONS BEFORE YOU BEGIN THE CHALLENGE 69

Lab One

BACKGROUND 71

Classification of bacteria and 16S rRNA gene 71

Polymerase chain reaction (PCR) 75

Learning outcomes 80

I: Obtain enough DNA for sequencing: amplify the 16S rRNA gene by PCR 80

PROCEDURE: Setting up a PCR reaction 80

PROCEDURE: Diluting from stock solutions: using the formula

$$C_1 \times V_1 = C_2 \times V_2 \quad 82$$

QUESTIONS 82

Lab Two

BACKGROUND 83

Agarose gel electrophoresis 83

Dideoxy DNA sequencing 85

Learning outcomes 89

I: Visualize the PCR product by agarose gel electrophoresis 90

PROCEDURE: Making an agarose gel and carrying out gel electrophoresis 90

II: Submit sample for DNA sequencing 92

QUESTIONS 92

Solving Challenge Two 93

BACKGROUND 93

Learning outcomes 93

Identifying the unknown microorganism from the 16S rRNA gene sequence 93

PROCEDURE: Preparing the sequence for analysis 93

PROCEDURE: Doing a BLAST search 94

QUESTIONS 96

BIBLIOGRAPHY 96

challenge Three

Choosing an antibiotic to alleviate the symptoms of Crohn's disease 97

QUESTIONS BEFORE YOU BEGIN THE CHALLENGE 97

Lab One

BACKGROUND 99

Exponential growth 99

The bacterial growth curve 107

Pure cultures in liquid medium and the real world of bacteria 108

Learning outcomes 109

I: Construct a growth curve and calculate the generation time 109

PROCEDURE: Recording the optical density of a growing culture 110

II: Determine viable cell counts during exponential growth 112

PROCEDURE: Serial dilution of samples 115

PROCEDURE: Spreading cells on agar medium 116

QUESTIONS 118

Lab Two

BACKGROUND 120

Assaying for antibiotic sensitivity 120

Learning outcomes 124

Determine the MICs of different antibiotics for the *Pseudomonas* isolate 124

PROCEDURE: Setting up a MIC dilution assay 125

QUESTIONS 127

Solving Challenge Three 128

BIBLIOGRAPHY 130

challenge Four

Tracking down the source of an *E. coli* strain causing a local outbreak of disease 131

QUESTIONS BEFORE YOU BEGIN THE CHALLENGE 131

Lab One

BACKGROUND 133

Genomic diversity and horizontal gene transfer (HGT) 133

The shifting genome of many bacteria 134

Conjugation and other mechanisms of horizontal gene transfer (HGT) 136*Learning outcomes 140***I: Determine if chloramphenicol resistance can be transferred by conjugation 140****PROCEDURE: Doing a conjugation experiment on TSA medium 141****II: Determine if the donor strain for conjugation contains a plasmid 145****PROCEDURE: Rapid isolation of plasmid DNA 145****QUESTIONS 148****Lab Two****BACKGROUND 149****Strain typing 149***Learning outcomes 155***I: Determine if the plasmid DNAs from the lettuce isolate and the pathogenic strain are related 155****PROCEDURE: Doing a restriction digest 156****PROCEDURE: Agarose gel electrophoresis of the DNA fragments 157***Solving Challenge Four 159***BIBLIOGRAPHY 159****challenge Five****Using bacteriophage to identify the farm releasing pathogenic bacteria into a village stream 161****QUESTIONS BEFORE YOU BEGIN THE CHALLENGE 161****Lab One****BACKGROUND 163****History and properties of bacteriophage 163****Testing water purity 167***Learning outcomes 170***I: Determine the load of bacteriophage at each collection site 170****PROCEDURE: Filter the water samples to remove all the bacteria 170****PROCEDURE: Titer the phages in the sterile filtrates 171***Solving Challenge Five 174***QUESTIONS 176****BIBLIOGRAPHY 176**

challenge Six

Evaluating the pathogenic potential of bacteria causing urinary infections 177

QUESTIONS BEFORE YOU BEGIN THE CHALLENGE 177

Lab One

BACKGROUND 179

Quorum sensing 179

Biofilms 182

Learning Outcomes 185

I: Determine if the hospital isolates form biofilms 185

PROCEDURE: Staining biofilms with crystal violet 186

II: Quantitatively analyze biofilm formation 187

PROCEDURE: Quantifying the amount of biofilm by spectrophotometry 187

III: Determine whether the hospital strains produce quorum sensing compounds 189

PROCEDURE: Using a reporter strain to detect quorum sensing 190

QUESTIONS 192

Lab Two

BACKGROUND 193

Swimming 193

Learning outcomes 195

I: Complete the analysis of quorum sensing 195

II: Assay the hospital strains for chemotaxis to different compounds 197

PROCEDURE: Testing for chemotaxis with the "plug-in-soft agar" assay 197

III: Determine the effectiveness of chemical cleaners 198

PROCEDURE: Testing for chemical effectiveness with the Kirby-Bauer disk diffusion assay 199

QUESTIONS 199

Solving Challenge Six 201

BIBLIOGRAPHY 202
