

# Contents

Preface

iii

## 1. PLANTS, TAXONOMY AND SYSTEMATICS

1-14

### *Plants and Kingdoms of Life* 1

- Two Kingdom System 1
- Two Empires Three Kingdoms 2
- Five Kingdom System 2
- Six or Seven Kingdoms? 2
- The Plant Kingdom 6

### *Taxonomy and Systematics* 7

- Basic Components (Principles) of Systematics 8
- Aims of Systematics 11
- Advancement Levels in Systematics 12

## 2. BOTANICAL NOMENCLATURE

15-45

### *Need for Scientific names* 15

- Why Latin? 16

### *Development of Botanical Code* 16

### *Contents of Botanical Code* 17

- Preamble 17
- Principles of ICBN 18
- Names of Taxa 18
- The Type Method 23
- Author Citation 25
- Publication of Names 26
- Rejection of Names 28
- Principle of Priority 30
- Names of Hybrids 34
- Names of Cultivated Plants 35

|                                               |           |               |
|-----------------------------------------------|-----------|---------------|
| <b>Unified Biological Nomenclature</b>        | <b>35</b> |               |
| Draft BioCode                                 | 36        |               |
| PhyloCode                                     | 38        |               |
| <b>3. HIERARCHICAL CLASSIFICATION</b>         |           | <b>46-55</b>  |
| <b>Taxonomic groups, categories and ranks</b> | <b>46</b> |               |
| <b>Utilization of categories</b>              | <b>48</b> |               |
| Species concept                               | 49        |               |
| Intraspecific ranks                           | 53        |               |
| Genus                                         | 54        |               |
| Family                                        | 54        |               |
| <b>4. DESCRIPTIVE TERMINOLOGY</b>             |           | <b>56-90</b>  |
| <b>Habit and life span</b>                    | <b>56</b> |               |
| <b>Habitat</b>                                | <b>57</b> |               |
| <b>Roots</b>                                  | <b>57</b> |               |
| <b>Stems</b>                                  | <b>58</b> |               |
| <b>Leaves</b>                                 | <b>61</b> |               |
| Leaf arrangement                              | 62        |               |
| Leaf duration                                 | 63        |               |
| Leaf incision                                 | 63        |               |
| Stipules                                      | 65        |               |
| Leaf shape                                    | 65        |               |
| Leaf margin                                   | 66        |               |
| Leaf base                                     | 66        |               |
| Leaf apex                                     | 67        |               |
| Leaf surface                                  | 68        |               |
| Venation                                      | 69        |               |
| <b>Inflorescence</b>                          | <b>69</b> |               |
| Racemose types                                | 69        |               |
| Cymose types                                  | 70        |               |
| Specialized types                             | 71        |               |
| <b>Flower</b>                                 | <b>71</b> |               |
| Calyx                                         | 73        |               |
| Corolla                                       | 74        |               |
| Perianth                                      | 74        |               |
| Androecium                                    | 74        |               |
| Gynoecium                                     | 77        |               |
| <b>Fruit</b>                                  | <b>79</b> |               |
| Simple fruits                                 | 80        |               |
| Aggregate fruits                              | 82        |               |
| Multiple fruits                               | 83        |               |
| <b>Floral formula</b>                         | <b>83</b> |               |
| <b>Floral diagram</b>                         | <b>83</b> |               |
| <b>5. PROCESS OF IDENTIFICATION</b>           |           | <b>91-127</b> |
| <b>Specimen preparation</b>                   | <b>91</b> |               |
| Fieldwork                                     | 91        |               |
| Equipment                                     | 92        |               |
| Collection                                    | 93        |               |
| Pressing                                      | 93        |               |

|                                                                        |                |
|------------------------------------------------------------------------|----------------|
| Handling special groups                                                | 94             |
| Drying                                                                 | 94             |
| <b>Herbarium methods</b>                                               | <b>95</b>      |
| Botanical gardens                                                      | 95             |
| Herbaria                                                               | 101            |

**Two Kingdom System**

The living organisms were originally grouped into two kingdoms. Aristotle divided all living things between plants, which generally do not move or have sensory organs, and animals. Linnaeus in his *Systema naturae*
