
Contents

1 What Is Life?	1
1.1 Hierarchical Organization of Knowledge	1
1.2 General Characteristics of Living Systems	5
1.3 Artificial Life	7
1.4 Biological Information, Information Processing and Signalling	17
1.5 Origin of Life	23
1.6 Emergence, Intelligence and Consciousness	47
2 What Are the Molecules of Life?	61
2.1 Nucleic Acids, DNA, RNA	61
2.1.1 Chemical Bonds and Bond Energies	65
2.2 Generalized Ester Bonds	65
2.3 Directionality of Chemical Bonds	69
2.4 Types of Inter-Atomic Interactions	80
2.4.1 Ionic Interactions	80
2.4.2 Covalent Bonds	83
2.4.3 Free Radicals	86
2.4.4 Van der Waals Forces	86
2.5 The Hydrogen Bonds and Hydrophobic Interactions	92
2.5.1 Polysaccharides	100
2.6 Amphipatic Molecules in Water Environments	101
2.6.1 Fatty Acids	103
2.6.2 Lipids	105
2.7 Structure of Proteins	105
2.7.1 The Polypeptide Chains	110
2.7.2 Proteins	112
2.7.3 The Process of Protein Folding	120
2.7.4 Electrophoresis of Proteins	124
2.7.5 Protein Interaction with Environment	125
2.7.6 Electron Transfer in Proteins	126
2.8 Structure of Nucleic Acids	127
2.8.1 The Electrostatic Potential of DNA	133
2.8.2 DNA: Information and Damage	134
2.8.3 Fluorescence in Biomolecules	136

3 What Is a Biological Cell?	151
3.1 Cytoplasm	151
3.1.1 Osmotic Pressure of Cells	152
3.1.2 Osmotic Work	153
3.2 Cytoskeleton	154
3.2.1 The Cytoskeleton	154
3.2.2 Biopolymers of the Cytoskeleton	156
3.2.3 Tubulin	157
3.2.4 Microtubules	161
3.2.5 Actin Filaments	166
3.2.6 Actin Binding Proteins	170
3.2.7 Intermediate Filaments	171
3.3 Tubulin Isotype Homology Modelling	173
3.3.1 Solvent Accessible Surface Area	177
3.3.2 Net Charge	177
3.3.3 Dipole Moment Estimation	178
3.3.4 Human Repeats and Dipole-Dipole Interactions	178
3.3.5 Motor Proteins	185
3.4 Anisotropic Elastic Properties of Microtubules	188
3.5 Centrioles, Basal Bodies, Cilia and Flagella	197
3.6 Networks and Meshworks of Protein Filaments, Stress Fibers and Tensegrity	201
3.7 Cell Nucleus and Chromosomes	203
3.7.1 Nuclear Chromatin, Chromosomes, Nuclear Lamina	203
3.7.2 Chromatin/Chromosomes	204
3.8 Mitochondria and Proton Pumps: Energy Generation and Utilization in the Cell	206
3.8.1 Cell Energetics: Chloroplasts and Mitochondria	206
3.8.2 The Cell as a Machine	208
3.8.3 Active Transport	209
3.8.4 Ion Channels and Ion Pumps	210
3.9 Cytochrome Oxidase Enzymes	212
3.9.1 Introduction	212
3.9.2 The Biochemical Structure and Function of the Cytochromes	213
3.9.3 A Simplified Model Calculation	218
3.9.4 A Proposed Mechanism	221
3.10 Membranes and Vesicles	224
3.11 Motor Proteins and Their Role in Cellular Processes	233
3.11.1 Myosin	236
3.11.2 Kinesin Family	239
3.11.3 Ncd Dimer Structure	241
3.11.4 Dynein	242
3.11.5 Myosin V	243
3.11.6 Myosin VI	249

3.12	Directed Binding as a Model of Kinesin Walk	250
3.12.1	Chemical Reaction-based Models	256
3.12.2	Mechanically Based Models	258
3.12.3	Models with Alternating Chemical and Mechanical Transformations	259
3.13	Other Structures	268
3.14	Large Polar Molecules	269
3.14.1	Bioferroelectricity	269
4	What Are Life Processes?	307
4.1	Oxidative Phosphorylation	307
4.1.1	The Biochemical Energy Currency- The ATP Molecule	308
4.2	Diffusion Processes	313
4.2.1	Translational Diffusion	314
4.2.2	Diffusional Flow Across Membranes	318
4.3	Proton Transport and Bioenergetics	329
4.3.1	Proton Transport	329
4.3.2	Bioenergetics: The Davydov Model	329
4.4	Electronic and Ionic Conductivities of Microtubules and Actin Filaments	335
4.4.1	The Neuron	336
4.4.2	The Cytoskeleton	340
4.4.3	Overview of Biological Conductivity	342
4.4.4	Intrinsic Electronic Conductivity of Microtubules	345
4.4.5	Actin Filaments Support Non-linear Ionic Waves	368
4.4.6	Long-range Spatio-temporal Ionic Waves along Microtubules	373
4.4.7	Dendritic Cytoskeleton Information Processing Model	378
4.4.8	The Inter-relation Between the Neural Cytoskeleton and the Membrane	381
4.4.9	Relationship to Cognitive Functions	382
4.4.10	The Potential for Bioelectronic Applications and Neuromorphic Computing	385
4.4.11	Discussion	387
4.5	Mechanisms of Exciton Energy Transfer in Scheibe Aggregates	389
4.5.1	The Exciton Model	390
4.5.2	Exciton Domain Size	393
4.5.3	Random Walk Model	395
4.5.4	Phonons	397
4.5.5	Exciton-Phonon Coupling	398
4.5.6	The Role of Non-linearity	399
4.5.7	Conclusions	400
4.6	Conformational Transitions in Proteins	403
4.6.1	The Protein-glass Model	406
4.6.2	The Protein-machine Model	407

4.7	Vesicle Transport and Molecular Motors	409
4.7.1	Chemo-Chemical Machines	409
4.7.2	Biological Machines as Biased Maxwell's Demons	413
4.7.3	Pumps and Motors as Chemo-chemical Machines	415
4.8	Muscle Contraction	420
4.8.1	Biophysics of Muscles	420
4.8.2	Biophysical Mechanisms, Contractile Proteins	424
4.9	Subcellular Structure Formation	428
4.9.1	Aspects of Polymerization of Microtubules	428
4.9.2	Simple Models of Microtubule Assembly	430
4.9.3	Developing a Stochastic Model	435
4.9.4	A Stochastic Model Without Rescues	436
4.9.5	The Averaged Picture; Master Equations	438
4.9.6	Stochastic Models with Rescues	440
4.9.7	A Model with a Finite Collapse Velocity	442
4.9.8	Conditions for Stationary Bell-Shaped Distributions	443
4.9.9	Coherence Effects	445
4.9.10	Summary and Conclusions	447
4.9.11	Assembly of Actin Filaments	448
4.10	Cell Division	453
4.10.1	Cell Division	453
