### PART I VIRUSES

|                                                                                                                                                                 |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| 1 Antiviral Drug Target Discovery with DNA Microarrays<br><i>Klaus Früh and Peter Ghazal</i> .....                                                              | 1  |
| 2 Chipping Away at HIV Pathogenesis<br><i>Steffney Elise Rought, Roman Sasik, Davey Mitchell Smith,<br/>and Jacques Corbeil</i> .....                           | 13 |
| 3 Microarray Analysis of Human Papillomavirus Pathogenesis<br><i>Yijian Elaine Chang and Laimonis A. Laimins</i> .....                                          | 25 |
| 4 Ribozymes as Gene Therapeutic Agents for HIV / AIDS:<br>A Potential Paradigm Shift<br><i>Gregory C. Fanning, Janet L. Macpherson, and Geoff Symonds</i> ..... | 39 |

### PART II BACTERIA

|                                                                                                                                      |     |
|--------------------------------------------------------------------------------------------------------------------------------------|-----|
| 5 Genomics and New Technologies Applied to Antibacterial<br>Drug Discovery<br><i>Donald T. Moir</i> .....                            | 53  |
| 6 Genomics of the <i>Mycobacterium tuberculosis</i> Complex<br>and BCG Vaccines<br><i>Marcel A. Behr and Stephen V. Gordon</i> ..... | 69  |
| 7 Bacterial "Genes-to-Screens" in the Post-Genomic Era<br><i>Michael J. Pucci, John F. Barrett, and Thomas J. Dougherty</i> .....    | 83  |
| 8 DNA Microarray Expression Analysis in Antibacterial<br>Drug Discovery<br><i>Brian J. Morrow and Karen Joy Shaw</i> .....           | 97  |
| 9 The Influence of Genomics on the Molecular Epidemiology<br>of Nosocomial Pathogens<br><i>Richard V. Goering</i> .....              | 113 |

- 10 *Borrelia* Genomics as a Tool for Studying  
Pathogenesis and Vaccine Development  
*Alireza Shamaei-Tousi and Sven Bergström* ..... 133

### PART III FUNGI

- 11 Antifungal Target Discovery and Evaluation: Lessons from  
*Saccharomyces cerevisiae*  
*Beth DiDomenico and Scott S. Walker* ..... 155
- 12 Antifungal Drug Discovery: Old Drugs, New Tools  
*Marianne D. De Backer, Walter H. M. L. Luyten,  
and Hugo F. Vanden Bossche* ..... 167
- 13 *Cryptococcus neoformans*: A Molecular Model for the Study  
of Fungal Pathogenesis and Drug Discovery in the Genomic Era  
*Jennifer K. Lodge and John R. Perfect* ..... 197
- 14 Antifungal Target Selection in *Aspergillus nidulans*:  
Using Bioinformatics to Make the Difference  
*Rosanna Pena-Muralla, Patricia Ayoubi, Marcia Graminha,  
Nilce M. Martinez-Rossi, Antonio Rossi, and Rolf A. Prade* ..... 215
- 15 Functional Genomics of *Histoplasma capsulatum*:  
Dimorphism and Virulence  
*Glenmore Shearer, Jr.* ..... 231
- 16 Gene Finding in *Coccidioides immitis*:  
Searching for Immunogenic Proteins  
*Theo N. Kirkland and Garry T. Cole* ..... 247

### PART IV PROTOZOA

- 17 *Toxoplasma gondii*: A Model for Evolutionary Genomics  
and Chemotherapy  
*Jessica C. Kissinger, Michael J. Crawford, David S. Roos,  
and James W. Ajioka* ..... 255
- 18 The Molecular Biology and Pathogenicity of *Entamoeba histolytica*  
*Barbara J. Mann and Brendan J. Loftus* ..... 281
- Index ..... 303
