Defining Conservation Biology 3

The New Science of Conservation Biology 6

The roots of conservation biology 8

A new science is born 13

The interdisciplinary approach: A case study with sea turtles 13

The Organizational Values of Conservation Biology 16

Looking to the Future 18

Summary 19

What Is Biodiversity? 23

Species Diversity 25

What is a species? 25

Measuring species diversity 29

Genetic Diversity 32

How does genetic diversity arise? 32

Measuring genetic diversity 33

Ecosystem Diversity 34

What are communities and ecosystems? 35

Species interactions within ecosystems 37

Trophic levels 38

Food chains and food webs 39

Keystone species and resources 40

Ecosystem dynamics 43

Biodiversity Worldwide 43

How many species exist worldwide? 44

Where is the world's biodiversity found? 48

The distribution of species 49

Summary 52

The Value of Biodiversity 55

Ecological and Environmental Economics 58

Cost-benefit analysis 59

Financing conservation 61

What are species worth? 62

Ecosystem services 63

Use Values 64

Direct use values 65

Consumptive use value 65

Productive use value 67

Indirect use values 70

Ecosystem productivity 71

Water and soil protection 73

Climate regulation 75

Species relationships and environmental monitors 76

Amenity value 77

Educational and scientific value 79

Multiple uses of a single resource: A case study 80

The Long-Term View: Option Value 80

Existence Value 83

Environmental Ethics 86

Ethical values of biodiversity 86

Deep ecology 89

Summary 90

Threats to Biodiversity: Habitat Change 95

Human Population Growth and Its Impact 97

Habitat Destruction 101

Tropical rain forests 104

Other threatened habitats 107

Desertification 110

Habitat Fragmentation 112

Threats posed by habitat fragmentation 113

Edge effects 117

Environmental Degradation and Pollution 119

Pesticide pollution 119

Water pollution 121

Air pollution 124

A Concluding Remark 126

Summary 126

Climate Change and Other Threats to Biodiversity 129

Global Climate Change 130

The relationship between carbon and temperature 130

Cascading effects of increased temperature 133

Ocean acidification, warming, and rising sea level 136

Shifting species ranges and other impacts 140

Overexploitation 142

International wildlife trade 144

Commercial harvesting 147

Invasive Species 150

Threats posed by invasive species 151

Invasive species on oceanic islands 153

Invasive species in aquatic habitats 154

The ability of species to become invasive 156

Control of invasive species 157

GMOs and conservation biology 159

Disease 160

A Concluding Remark 163

Summary 164

Extinction Risk 167

The Meaning of "Extinct" 170

The current, human-caused mass extinction 172

Local extinctions 174

Extinction rates in aquatic environments 175

Measuring Extinction 176

Background extinction rates 176

*Extinction rate predictions
and the island biogeography model* 177

Extinction rates and habitat loss 180

Vulnerability to Extinction 182

Problems of Small Populations 187

- Loss of genetic diversity* 188
- Consequences of reduced genetic diversity* 191
- Factors that determine effective population size* 194
- The impact of stochasticity* 198
- The extinction vortex* 201

Summary 202

Conserving Populations and Species 205

Applied Population Biology 206

- Researching existing information* 207
- New data through fieldwork* 210
- Population viability analysis (PVA)* 217
- Minimum viable population (MVP)* 219
- Metapopulations* 222
- Long-term monitoring* 223

Conservation Categories 225

Prioritization: What Should Be Protected? 230

- The species approach* 230
- The ecosystem approach* 231
- The wilderness approach* 232
- The hotspot approach* 233

Legal Protection of Species 234

- National laws* 234
- International agreements* 238

Summary 243

Establishing New Populations and Ex Situ Conservation 247

Establishing and Reinforcing Populations 248

- Special considerations for animal programs* 251
- Behavioral ecology of released animals* 255
- Establishing plant populations* 257
- The status of new populations* 257

Ex Situ Conservation Strategies 259

- Zoos* 263
- Aquariums* 268
- Botanical gardens* 269
- Seed banks* 270

Can Technology Bring Back Extinct Species? 273**Summary 275****Protected Areas 279****Establishment and Classification of Protected Areas 281**

- Marine protected areas* 285
- The effectiveness of protected areas* 286
- Measuring effectiveness: Gap analysis* 288

Designing Protected Areas 290

- Protected area size and characteristics* 292

Networks of Protected Areas 297

- Habitat corridors* 297

Landscape Ecology and Park Design 301**Managing Protected Areas 303**

- Managing sites* 305
- Monitoring sites* 307
- Management and people* 308
- Zoning as a solution to conflicting demands* 309
- Biosphere reserves* 309

Challenges to PA Management 311

- Poaching* 312
- Trophy hunting* 312
- Human-animal conflict* 312
- Degradation* 312
- Climate change* 313
- Funding and personnel* 313

Summary 314

Conservation Outside Protected Areas 317

The Value of Unprotected Habitat 319

Military land 322

Unprotected ecosystems 323

Land that is undesirable to humans 325

Private land 325

Conservation in Urban and Other Human-Dominated Areas 326

Urban areas 327

Other human-dominated landscapes 328

Ecosystem Management 331

Working with Local People 334

Biosphere reserves 336

In situ agricultural conservation 337

Extractive reserves 337

Community-based initiatives 339

Payments for ecosystem services 340

Evaluating conservation initiatives that involve traditional societies 342

Case Studies: Namibia and Kenya 342

Summary 346

Restoration Ecology 349

Where to Start? 351

Restoration in Urban Areas 356

Restoration Using Organisms 358

Moving Targets of Restoration 362

Restoration of Some Major Communities 363

Wetlands 363

Aquatic systems 364

Prairies and farmlands 367

Tropical dry forest in Costa Rica 368

The Future of Restoration Ecology 370

Summary 371

The Challenges of Sustainable Development 375

Sustainable Development at the Local Level 377

Local and regional conservation regulations 377

Land trusts and related strategies 379

Enforcement and public benefits 383

Conservation at the National Level 384

International Approaches to Sustainable Development 386

International Earth summits 387

International agreements that protect habitat 391

Funding for Conservation 395

International assistance and the World Bank 396

Environmental trust funds 400

Debt-for-nature swaps 400

Other sources of funding 401

How effective is conservation funding? 401

Summary 403

An Agenda for the Future 407

Ongoing Problems and Possible Solutions 408

The Role of Conservation Biologists 416

Challenges for conservation biologists 417

Achieving the agenda 417

Summary 423

Appendix 425

Glossary 429

Bibliography 439
