|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Preface</b>   |                                                                                                                                                                                           | <b>vii</b> |
| <b>Chapter 1</b> | Perspectives in Primate Bioacoustics<br><i>B. M. Bezerra, A. S. Souto and G. Jones</i>                                                                                                    | <b>1</b>   |
| <b>Chapter 2</b> | The Hypothalamic-Pituitary-Adrenal Axis in Nonhuman Primates:<br>Circadian Rhythms of Stress Responsiveness and Aging<br><i>N.D. Goncharova</i>                                           | <b>29</b>  |
| <b>Chapter 3</b> | Why Apes Point: Pointing Gestures in Spontaneous Conversation of<br>Language-Competent Pan/Homo Bonobos<br><i>Janni Pedersen, Pär Segerdahl and William M. Fields</i>                     | <b>53</b>  |
| <b>Chapter 4</b> | Using Sexual Dimorphism and Development to Reconstruct Mating<br>Systems in Ancient Primates<br><i>Susan Cachel</i>                                                                       | <b>75</b>  |
| <b>Chapter 5</b> | How Latent Solution Experiments Can Help to Study Differences<br>between Human Culture and Primate Traditions<br><i>Claudio Tennie and Daniela Hedwig</i>                                 | <b>95</b>  |
| <b>Chapter 6</b> | The Tendency to Make Man An Exception<br><i>Niccolo Caldararo</i>                                                                                                                         | <b>113</b> |
| <b>Chapter 7</b> | Studying Social Development and Cognitive Abilities in Gibbons<br>( <i>Hylobates</i> spp): Methods and Applications<br><i>Susan M. Cheyne</i>                                             | <b>129</b> |
| <b>Chapter 8</b> | Comparing Methods for Assessing Learning and Cognition in<br>Primates<br><i>Michael J. Beran, Theodore A. Evans and David A. Washburn</i>                                                 | <b>153</b> |
| <b>Chapter 9</b> | Patterns of Daily Movement, Activities and Diet in Woolly<br>Monkeys (Genus <i>Lagothrix</i> ): A Comparison Between Sites and<br>Methodologies<br><i>M. González and P. R. Stevenson</i> | <b>171</b> |

|                   |                                                                                                                                                     |            |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Chapter 10</b> | <b>"How Close Should We Get?"—Researchers' Role in Preventing the Anthropozoonotic Outbreaks in Groups of Free Ranging Chimpanzees and Gorillas</b> | <b>187</b> |
|                   | <i>Magdalena Lukasik-Braum</i>                                                                                                                      |            |
