|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Preface</b>   |                                                                                                                                                                                                                                                                                                                                    | <b>vii</b> |
| <b>Chapter 1</b> | Genetic Diversity of Human and Animal Papilloma Viruses<br><i>Antonio Carlos de Freitas, Ana Pavla Almeida Diniz Gurgel,<br/>Bárbara Simas Chagas, Valdir de Queiroz Balbino<br/>and Marcus Vinicius Aragão Batista</i>                                                                                                            | <b>1</b>   |
| <b>Chapter 2</b> | Genetic Diversity and Phylogeny of Wild Specie Teosinte<br>( <i>Zea Nicaraguense</i> , Iltis and Benz) within Genera <i>Zea</i><br><i>Carlos Henry Loáisiga Caballero,<br/>Alvaro Nicolas Benavides Gonzales, Pernilla Ellneskog-Staam,<br/>Oscar Rocha, Agnese Brantestam, Mulatu Geleta, Salomon Björn<br/>and Arnulf Merker</i> | <b>33</b>  |
| <b>Chapter 3</b> | Conservation Genetics of the Lion:<br>New Approaches to Species Conservation<br><i>Laura Bertola, Klaas Vrieling and Hans de Iongh</i>                                                                                                                                                                                             | <b>61</b>  |
| <b>Chapter 4</b> | Genetic Diversity for Quality Traits in Wild and Ancient Wheats<br><i>Juan B. Alvarez and Carlos Guzmán</i>                                                                                                                                                                                                                        | <b>83</b>  |
| <b>Chapter 5</b> | The Genetic History of Morocco<br><i>Kaoutar Bentayebi, Antònia Picornell and Saaïd Amzazi</i>                                                                                                                                                                                                                                     | <b>109</b> |
| <b>Chapter 6</b> | Different Approaches to Assess Structure<br>and Genetic Diversity in Forest Species<br><i>M. A. Martín and L. M. Martín</i>                                                                                                                                                                                                        | <b>133</b> |
| <b>Chapter 7</b> | New Genetic Provisions for the Reinstatement<br>of the Ginseng Natural Populations<br><i>Yuriy Zhuravlev, Galina Reunova, Irina Kats and Tamara Muzarok</i>                                                                                                                                                                        | <b>155</b> |
| <b>Chapter 8</b> | Genetic and Epigenetic Variations in Disease and Drug Response<br><i>Barkur S. Shastry</i>                                                                                                                                                                                                                                         | <b>177</b> |

|                   |                                                                                                                                                                                                                             |            |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Chapter 9</b>  | New Research on the Genetic Diversity of Non-Rhizobial Endophytes Inhabiting Legume Nodules<br><i>Alvaro Peix, Lorena Carro, Eugenia Cerda-Castillo, Carmen Tejedor, Martha-Helena Ramírez-Bahena and Encarna Velázquez</i> | <b>191</b> |
| <b>Chapter 10</b> | Genetic Diversity and Genetic Rescue within Wildlife Populations<br><i>Shawn Larson</i>                                                                                                                                     | <b>203</b> |
| <b>Chapter 11</b> | The Genus <i>Cunila</i> D. Royen Ex. L. (Lamiaceae): A Review on Genetic Variability and Advances in Taxonomy<br><i>G. Agostini, T. S. Ribeiro, S. Echeverrigaray and T. T. Souza-Chies</i>                                 | <b>213</b> |
| <b>Chapter 12</b> | Modelling Minimization of Genetic Diversity Loss in Japanese Marine Finfish Stock Enhancement<br><i>Maria del Mar Ortega-Villaizan and Nobuhiko Taniguchi</i>                                                               | <b>225</b> |
| <b>Index</b>      |                                                                                                                                                                                                                             | <b>233</b> |
