
Contents

Preface		vii
Chapter 1	Structural Aspects of Ribosomal Ligands Interactions Providing the Work of the Human Translational Machinery <i>Dmitri Graifer and Galina Karpova</i>	1
Chapter 2	Ribosomal Alterations and Immune-Related Illness: Evidence of Links between Ribosomal Stress Signaling and Disease <i>Yuseok Moon</i>	31
Chapter 3	The Role of Ribosomes in Mediating Hypoxia Response and Tolerance in Eukaryotes <i>Ajit N. Shah, Md Maksudul Alam, Thai Cao and Li Zhang</i>	49
Chapter 4	Putative Protein-encoding Genes within Mitochondrial rDNA and the D-loop Region <i>Hervé Seligmann</i>	67
Chapter 5	Translational Apparatus of Microorganisms at Low Temperature <i>Jihwan Hwang, Masayori Inouye and Sangita Phadtare</i>	87
Chapter 6	Structure, Function and Potential Biomedical Use of Ribosome-Inactivating Proteins <i>Hong Xu and Wang-Yi Liu</i>	103
Chapter 7	Coarse-Graining the Nano-Machine Ribosome to Elucidate Its Functional Dynamics <i>Ozge Kurkcuoglu and Pemra Doruker</i>	119
Chapter 8	Ribosomal Incorporation of Unusual Amino Acids: Learning from Mother Nature <i>Wei Ren and Hui-wang Ai</i>	133
Chapter 9	EMG1 Harboring the Bowen-Conradi Syndrome D86G Substitution Localizes Normally but Has Reduced Stability <i>Joy Armistead and Barbara Triggs-Raine</i>	147
Index		161
