## 1. Are Ionic Liquids Ready for Lipids Processing?

*Xuebing Xu, Zheng Guo, Ling-Zhi Cheong*

|                                                                             |   |
|-----------------------------------------------------------------------------|---|
| 1.1 Ionic Liquids, Not Just a Neoteric Solvent: Expanding in Diverse Fields | 1 |
| 1.2 Evolution of Ionic Liquid Concept                                       | 4 |
| 1.3 Opportunities Offered by Ionic Liquids for Lipid Processing             | 4 |
| 1.4 What Is New in This Book?                                               | 6 |

## 2. Biocatalysis and Biotransformation in Ionic Liquids

*Caroline Emilie Paul, Vicente Gotor Fernández*

|                                                                                 |    |
|---------------------------------------------------------------------------------|----|
| 2.1 Introduction to Ionic Liquids for Biocatalysis:                             |    |
| Aim and Scope                                                                   | 13 |
| 2.1.1 Structural Properties                                                     | 14 |
| 2.1.2 Classes of Ionic Liquids                                                  | 15 |
| 2.1.3 Benefits of Ionic Liquids in Biotransformations                           | 16 |
| 2.1.4 Ionic Liquids and Hydrolases                                              | 17 |
| 2.1.5 Hydrolytic Reactions                                                      | 18 |
| 2.1.6 Transesterification Reactions                                             | 22 |
| 2.1.7 Hydrolases and Ionic Liquids: Other Applications and Reaction Types       | 25 |
| 2.1.8 Nonsolvent Applications of Ionic Liquids in Hydrolase-Catalyzed Reactions | 29 |
| 2.2 Ionic Liquids and Oxidoreductases                                           | 31 |
| 2.2.1 Reductions and Oxidations: Dehydrogenases                                 | 31 |
| 2.2.2 Oxidations and Hydroxylations: Oxidases, Monooxygenases, and Peroxidases  | 35 |
| 2.2.3 Cofactor Recycling Using Ionic Liquids                                    | 36 |
| 2.3 Ionic Liquids and Other Classes of Enzymes                                  | 39 |
| 2.4 Deep Eutectic Solvents in Biocatalysis                                      | 41 |
| 2.4.1 Conventional Hydrolase-Catalyzed Processes in Deep Eutectic Solvent       | 41 |

|           |                                                                                       |     |
|-----------|---------------------------------------------------------------------------------------|-----|
| 2.4.2     | Nonconventional and Tandem Hydrolase-Catalyzed Processes in Deep Eutectic Solvent     | 45  |
| 2.4.3     | Deep Eutectic Solvent in Other Biocatalytic Processes                                 | 46  |
| 2.5       | Conclusions and Outlook                                                               | 47  |
|           | References                                                                            | 48  |
| <b>3.</b> | <b>Lipase Production and Purification from Fermentation Broth Using Ionic Liquids</b> |     |
|           | <i>Sónia P.M. Ventura, João A.P. Coutinho</i>                                         |     |
| 3.1       | Introduction                                                                          | 59  |
| 3.2       | Common Methods of Lipase Extraction                                                   | 63  |
| 3.2.1     | Common Separation Techniques                                                          | 63  |
| 3.2.2     | Liquid-Liquid Extraction                                                              | 65  |
| 3.3       | Lipase Extraction by IL-Based ABS                                                     | 79  |
| 3.4       | Main Conclusions                                                                      | 84  |
| 3.5       | Critical Analysis and Future Challenges                                               | 88  |
|           | References                                                                            | 92  |
| <b>4.</b> | <b>Lipase Activation and Stability Enhancement in Ionic Liquids</b>                   |     |
|           | <i>Hua Zhao</i>                                                                       |     |
| 4.1       | Introduction                                                                          | 99  |
| 4.2       | Effect of Physical Properties of ILs on Lipase Activity and Stability                 | 99  |
| 4.2.1     | IL Polarity                                                                           | 100 |
| 4.2.2     | Hydrogen-Bond (H-Bond) Basicity and Nucleophilicity of Anions                         | 100 |
| 4.2.3     | IL Network                                                                            | 104 |
| 4.2.4     | Ion Kosmotropicity                                                                    | 105 |
| 4.2.5     | IL Viscosity                                                                          | 110 |
| 4.2.6     | IL Hydrophobicity                                                                     | 111 |
| 4.2.7     | Enzyme Dissolution                                                                    | 117 |
| 4.2.8     | Other Factors Influencing Lipase Activity and Stability                               | 118 |
| 4.2.9     | Mechanisms of IL-Lipase Interactions                                                  | 120 |
| 4.3       | Methods to Improve Lipase Activity and Stability                                      | 121 |
| 4.3.1     | Enzyme Immobilization                                                                 | 122 |
| 4.3.2     | PEG-Modification                                                                      | 126 |
| 4.3.3     | Chemical Modifications of Lipases                                                     | 127 |
| 4.3.4     | Enzyme Precipitated and Rinsed with <i>n</i> -Propanol                                | 128 |
| 4.3.5     | Water-in-IL Microemulsions                                                            | 129 |
| 4.3.6     | Coating Enzymes with ILs                                                              | 130 |
| 4.3.7     | Designing Lipase-Compatible ILs                                                       | 131 |
| 4.4       | Deep Eutectic Solvents for Lipase Activation                                          | 135 |
| 4.5       | Prospects                                                                             | 137 |
|           | Acknowledgments                                                                       | 137 |
|           | References                                                                            | 137 |

### 5. Rational Design of Ionic Liquids for Lipid Processing

*Zheng Guo*

|                                                                                              |     |
|----------------------------------------------------------------------------------------------|-----|
| <b>5.1 Introduction</b>                                                                      | 153 |
| 5.1.1 Motivation and Conditions for Design of Task-Specific ILs                              | 155 |
| 5.1.2 Steps Toward a Priori Design of ILs                                                    | 157 |
| <b>5.2 Experimental Approaches for Characterization of Physicochemical Properties of ILs</b> | 159 |
| 5.2.1 Measurements of Physicochemical Properties of ILs                                      | 159 |
| 5.2.2 Use of the Database of ILs                                                             | 163 |
| <b>5.3 Predictions of Physicochemical Properties of ILs</b>                                  | 164 |
| 5.3.1 Empirical/Semiempirical Approaches                                                     | 166 |
| 5.3.2 Fast Screening of ILs: QSPR and Linear Free Energy Descriptors                         | 175 |
| 5.3.3 Molecular Dynamic Modeling                                                             | 178 |
| 5.3.4 Quantum Chemistry Modeling and COSMO-RS                                                | 183 |
| <b>5.4 Rational Design of ILs for Lipids Processing</b>                                      | 188 |
| <b>5.5 Concluding Remarks and Perspectives</b>                                               | 193 |
| Acknowledgment                                                                               | 194 |
| References                                                                                   | 194 |

### 6. Synthesis and Properties of Lipid-Inspired Ionic Liquids

*Arsalan Mirjafari, Richard A. O'Brien, James H. Davis, Jr.*

|                                                                                      |     |
|--------------------------------------------------------------------------------------|-----|
| <b>6.1 Introduction</b>                                                              | 205 |
| 6.1.1 Lipid-Inspired Materials                                                       | 205 |
