

CONTENTS

Preface		ix
Chapter 1	Cell Responses to Low- and High-LET Exposure:	
	The Recent Peculiarities	1
	Abstract	1
	Introduction	1
	1.1. Probability Model for Cell Responses to Irradiation	3
	1.2. RBE of Densely Ionizing Radiation for Wild-type and Radiosensitive Mutants of Yeast	14
	1.3. Radiosensitivity of Haploint Yeast Cells Irradiated with Sparsely and Densely Ionizing Radiations	21
	1.4. Genetic Control of RBE of α -particles for Yeast Cells Irradiated in Stationary and Exponential Phase of Growth	25
	1.5. Liquid Holding Recovery Kinetics in Wild-type and Radiosensitive Mutant Yeast Cells Exposed to Low- and High-LET Radiations	32
	1.6. RBE of α -Particles and Postradiation Recovery in a Temperature Conditional Diploid Yeast Mutant for Various Criteria of Cell Death	38
	1.7. Radiation Quality and the Shape of Dose-effect Curves for Eukaryotic Cells: Theoretical Consideration, Recent Data and Interpretation	42
	Conclusion	51
	References	56
Chapter 2	Novel Direction in Study of Radioprotecting and Radiosensitizing Action of Chemical Compounds	61
	Abstract	61
	Introduction	61
	2.1. Radioprotecting Action of Chemical Compounds on γ -irradiated Yeast Cells of Various Genotypes in <i>Saccharomyces</i> Yeast Cells	63
	2.2. Oxygen Effect in DNA-Proficient and -Deficient Yeast Cells	69

2.3. Radiosensitization of Hypoxic Cells by Chemical Compounds in Wild-type and Radiosensitive Mutants of Yeast	72
2.4. Radiosensitivity Modification of γ -Irradiated Haplont Yeast Cells	80
2.5. Participation of Recovery Systems in Cell Radiosensitivity Modification	85
Conclusion	91
References	94
Chapter 3 Quantitative Regularities of Combined Action of Various Agents	97
Abstract	97
Introduction	98
3.1. Quantitative Estimation of Interaction after Combined Actions	100
3.2. Additive and Antagonistic Interaction: Selective Examples	106
3.3. Photoreactivation after Combined Action of Ionizing Radiation and Visible Light	112
3.4. Parameters of Bacterial Photoreactivation after Exposure to UV Light and Ionizing Radiation	117
3.5. Estimation of UV Light Dose Concomitant to Irradiation with Ionizing Radiation	122
Conclusion	127
References	131
Chapter 4 Clue for Understanding the Mechanism Involved in Synergistic Effects	135
4.1. Survival and Recovery of Yeast Cells after Combined Action of Ionizing Radiation and Hyperthermia	137
4.2. The Impact of Simultaneous Exposure to UV Radiation and Hyperthermia to the Recovery in Yeast Cells	147
4.3. Repair of DNA Breaks in Mammalian Cells after Thermoradiation Action	154
4.4. Recovery of Mammalian Cells after Combined Influence of Ionizing Radiation and Hyperthermia	159
4.5. The Role of Chloramphenicol on Hyperthermic Cytotoxicity and Cell Permeability under Various Heating Rates	166
References	176
Chapter 5 The Mathematical Approach for Synergistic Effect: Prognosis and Optimization	183
Abstract	183
Introduction	183
5.1. Some Common Features of Synergistic Effects Display: Order among the Chaos of the Effects Observed	186

5.2. Sublesion Manifestation in the Distant Descendants of Yeast Cells Surviving after Irradiation	195
5.3. The Basic Assumptions and Development of the Theoretical Model of Synergy under the Simultaneous Action of Agents	200
5.4. The Dependence of Synergy on the Intensity of Applied Agents: Mathematical Modeling and Interpretation	207
5.5. Prediction of Irreversible Component of Radiation Damage after Combined Action	210
Conclusion	212
References	215
Chapter 6	
Quantitative Prognosis of Synergistic Effects and Recovery for Various Biological Objects	219
Abstract	219
Introduction	219
6.1. Synergistic Responses of Viruses, Bacillus subtilis Spore, Streptococcus and Bacteria Escherichia coli	222
6.2. The Peculiarities of the Interaction of Ionizing Radiation and heat in Yeast Cells Irradiated with Various Dose Rate	232
6.3. The Fluence Rate Determines the Synergistic Interaction of UV Light and Heat	236
6.4. Prognosis of Yeast Cell Recovery after the Simultaneous Action of Hyperthermia with Ionizing Radiation or UV Light	248
6.5. Ultrasound Intensity and Its Role in Synergistic Interaction of Ultrasound and Hyperthermia	256
6.6. Prediction of the Thermal Enhancement Ratio after the Sequential Thermoradiation Action	267
Conclusion	274
References	279
Chapter 7	
Synergistic Effects Display for Cultured Mammalian Cells, Animals and Humans	283
Abstract	283
Introduction	283
7.1. Synergistic Interaction of Hyperthermia with Ionizing Radiation or Cytostatics on Cultured Mammalian Cells	285
7.2. The Role of Recovery Inhibition in Cancer Research	291
7.3. Rabbit Heating by Microwave Exposure at Various Ambient Temperatures	302
7.4. Significance of Synergistic Effects for Humans	314
Conclusion	322
Author Contact Information	331
Index	333
