

CONTENTS

Preface | vii

Acknowledgments | xii

About the Author | xiii

PART I: New Concepts in Microbiology

Chapter 1 Bacteria: Many Friends, Few Enemies | 3

Chapter 2 Bacteria: Highly Organized Unicellular Organisms | 9

Chapter 3 The RNA Revolution | 15

Chapter 4 From the CRISPR Defense System to the CRISPR/Cas9
Method for Modifying Genomes | 23

Chapter 5 Antibiotic Resistance | 29

PART II: Sociomicrobiology: The Social Lives of Bacteria

Chapter 6 Biofilms: When Bacteria Gather Together | 41

Chapter 7 How Bacteria Communicate: Chemical Language
and Quorum Sensing | 45

- Chapter 8 When Bacteria Kill Each Other | 49
- Chapter 9 Human-Animal Symbioses: The Microbiotas | 55
- Chapter 10 Bacterium-Plant Symbioses: Microbiotas of Plants | 67
- Chapter 11 Endosymbiotic Relationships | 73

PART III:
The Biology of Infections

- Chapter 12 Pathogenic Bacteria, Major Scourges, and New Diseases | 81
- Chapter 13 The Multiple Strategies of Pathogenic Bacteria | 103
- Chapter 14 Pathogenic Bacteria in Insects | 111
- Chapter 15 Plants and Their Pathogenic Bacteria | 115
- Chapter 16 New Visions in Infection Defense | 119

PART IV:
Bacteria as Tools

- Chapter 17 Bacteria as Tools for Research | 125
- Chapter 18 Bacteria: Old and New Health Tools | 135
- Chapter 19 Bacteria as Environmental Tools | 143
- Chapter 20 Conclusion | 147

Appendix: Major Figures in Microbiology | 151

Glossary | 155

Bibliography | 159

Photo credits | 173

Index | 175
