Preface

vii

- 1. Liquid Crystal** 1
Introduction • History • Liquid Crystal Phases • Thermotropic Liquid Crystals • Lyotropic Liquid Crystals • Metallotropic Liquid Crystals • Biological Liquid Crystals • Pattern Formation in Liquid Crystals • Theoretical Treatment of Liquid Crystals • Order Parameter • Bionics • Protein Design • Self-replication • Cucurbituril • Cyclophane
- 2. Metallacycle** 44
Nomenclature • Classes of Metallacycles • Functional Group • Ether • Coagulation • Enzyme • Cofactor
- 3. Enzyme Catalysis** 94
Induced Fit • Catalysis by Induced Fit • Inorganic Chemistry • Catalysis
- 4. Phagocytosis** 126
In Immune System • In Apoptosis • In Protists • Bacterial Cell Structure • The Gram Positive Cell Wall • The Gram Negative Cell Wall • Other Bacterial Surface Structures • Ribosomes and other Multiprotein Complexes • Cell Adhesion • Epithelium
- 5. Elasticity of Cell Membranes** 148
Elasticity of Lipid Vesicles • Elasticity of Open Lipid Membranes • Elasticity of Cell Membranes • Stacking • Carboxylic Acid • Physical Properties • Synthesis
- 6. Acyl Chloride** 166
Nomenclature • Properties • Synthesis • Reactions • Amide • Ester • Ruthenium • Photochemistry

7. General Properties of the Cycloalkanes **199**

Introduction • Nomenclature • Properties • Ring Strain
• Reactions • Monosaccharides • Glucosamine • Sialic Acid
• N-Acetylglucosamine • Antibiotics and Drugs • Beyond
Antibiotics: Treating Multi-drug-resistant Bacteria • Beyond
Antibiotics: Treating Non-bacterial Infections • Principles of
Molecular Evolution • Hypothetical Types of Biochemistry

Bibliography **249**

Index **253**
