Chapter 1	Making Maquette Models of Bioenergetic Structures	1
	<i>Christopher C. Moser, Nathan M. Ennist, Joshua A. Mancini and P. L. Dutton</i>	
1.1	Unravelling Protein Complexity	1
1.2	Robust, Modular, Helix-bundle Scaffold for Electron-transfer Architecture	2
1.3	Securing Cofactors with Histidines	5
1.3.1	Hemes	5
1.3.2	Non-iron Tetrapyrroles	7
1.4	Securing Cofactors with Cysteines	7
1.4.1	Heme C and Bilins	7
1.4.2	Iron-Sulfur Clusters	8
1.5	Securing Metals with Cys, His or Carboxylates	8
1.6	Redox Active Amino Acids	8
1.7	Practical Design Rules for Intraprotein Electron Tunnelling	9
1.8	Bioenergetic Function Examples	11
1.8.1	Ligand Binding and Transport	11
1.8.2	Excitation Energy Transfer	12
1.8.3	Interprotein Electron Transfer	13
1.8.4	Intraprotein Electron Transfer	14
1.9	Photosynthetic Charge Separation Engineering	15
1.9.1	Photochemical Dyad and Triad Dynamics	15
1.9.2	Photochemical Tyrosine Oxidation	16
1.9.3	Photochemical Metal Cluster Oxidation	17

Chemical Biology No. 5

Mechanisms of Primary Energy Transduction in Biology

Edited by Mårten Wikström

1.10 Conclusion	18
Acknowledgements	19
References	19
Chapter 2 Structure of Respiratory Complex I: "Minimal" Bacterial and "De luxe" Mammalian Versions	25
<i>Leonid A. Sazanov</i>	
2.1 Introduction	25
2.2 Overview of the Bacterial Enzyme Structure	30
2.3 Electron Transfer Pathway	32
2.3.1 NADH/FMN Binding Site	32
2.3.2 Fe-S Clusters	32
2.3.3 Quinone Binding Site	35
2.3.4 Cluster N1a and ROS Production	36
2.4 Proton-translocating Channels	37
2.5 Additional Subunits in Bacterial Enzyme	39
2.6 Coupling Between Electron Transfer and Proton Translocation	40
2.7 Recent Structural Studies on Mammalian Complex I	41
2.8 Structure of the Ovine Mitochondrial Complex I	43
2.8.1 Core Subunits	43
2.8.2 Supernumerary Subunits	45
2.8.3 Cofactors in Supernumerary Subunits	47
2.9 Mitochondrial Complex I Mechanism: Similar to Bacterial but with Extra "Stabilisers" and "Sensors"	50
References	52
Chapter 3 Structure and Function of Respiratory Complex I	60
<i>Volker Zickermann</i>	
3.1 Introduction	60
3.2 Overall Structure of Complex I	63
3.3 Accessory Subunits	64
3.4 Central Subunits of the Membrane Arm	65
3.5 Proton Translocation Pathways and the Central Hydrophilic Axis	67
3.6 Peripheral Arm and Ubiquinone Binding Site	69
3.7 Structural Basis of the A/D transition	71
3.8 Catalytic Mechanism of Redox Linked Proton Translocation	73
Acknowledgements	76
References	76

Chapter 4	Multi-scale Molecular Simulations on Respiratory Complex I	81
	<i>Ville R. I. Kaila</i>	
4.1	Introduction to Structure and Function of Complex I	81
4.2	Computational Models and Methods	83
4.2.1	Classical Molecular Dynamics Simulations	83
4.2.2	Free-energies and Electrostatic Poisson-Boltzmann Calculations	86
4.2.3	Quantum Chemical Density Functional Theory Models	87
4.2.4	Hybrid Quantum Mechanics/Classical Mechanics Models	89
4.3	Dynamics of Electron Transfer	90
4.4	Mechanism of Quinone Reduction	92
4.5	Redox-linked Conformational Changes in the Membrane Domain	94
4.6	Function of the Proton Pump	95
4.7	Putative Model for Redox-driven Proton-pumping	97
4.8	Conclusions	98
	Abbreviations	98
	Acknowledgements	99
	References	99
Chapter 5	Coupling Hydride Transfer to Proton Pumping: the Swiveling Mechanism of Transhydrogenase	104
	<i>Sangjin Hong, Josephine H. Leung, Chang Sun, Paween Mahinthichichan, Lici Schurig-Briccio, Pius S. Padyatti and Robert B. Gennis</i>	
5.1	Introduction	104
5.2	Location and Physiological Roles of Transhydrogenase	105
5.3	Significance of the Transhydrogenase to Human Health	107
5.4	Domains, Subunits and Sequence Conservation	108
5.4.1	Single-subunit Transhydrogenase, Variant 1	109
5.4.2	Single-subunit Transhydrogenase, Variant 2	109
5.4.3	Two-subunit Transhydrogenase	109
5.4.4	Three-subunit Transhydrogenase	111
5.5	Steady State Assays of the Transhydrogenase	111

5.6	Structures of the Isolated Domains: Divide and Conquer	113
5.6.1	Domain I	113
5.6.2	Domain III	116
5.6.3	Heterotrimer, (dI) ₂ (dIII)	117
5.6.4	The Membrane Domain (dII)	119
5.7	Structure of the Holo-enzyme	123
5.7.1	Two Orientations of Domain III	123
5.7.2	Asymmetry of the Two Protomers of Domain II	125
5.7.3	Proton Translocation and the Face-down Orientation of dIII	126
5.8	Key Biochemical Observations	126
5.8.1	Cooperativity Between the Two Protomers	126
5.8.2	Direct Hydride Transfer Across the dI/dIII Interface	126
5.8.3	Hydride Transfer Between Enzyme-bound Dinucleotides Favors the Formation of NADPH	127
5.9	Insights from Binding Studies	129
5.9.1	Binding of NAD(H) to Domain I is Not Influenced by the Presence or Absence of the Membrane Domain	129
5.9.2	Negative Cooperativity Prevents the Formation of "Dead End" States of the Enzyme	129
5.9.3	The Occluded State of dIII Has a Very High Apparent Affinity for NADP(H)	129
5.10	Insights from Mutagenesis Studies of the Membrane Domain	130
5.10.1	Mutations in the Middle of the Membrane Domain (dII) Influence Enzyme Activity, Proton Translocation and the Binding of NADP(H)	130
5.10.2	Mutations in the Hinge Region (<i>Ec</i> -βK261 to <i>Ec</i> -βR265) and <i>Ec</i> -βD213 Inhibit Transhydrogenase Activity	131
5.11	Working Model for Coupling Hydride Transfer and Proton Translocation Across the Membrane	132
5.11.1	The Main Features of the Model are Briefly Summarized	132
	References	134

Chapter 6 The Na⁺-Translocating NADH: Ubiquinone Oxidoreductase (Na⁺-NQR)	140
<i>Katherine Mezic, Masatoshi Murai, Hideto Miyoshi and Blanca Barquera</i>	
6.1 Introduction	140
6.2 The Electron Pathway	141
6.3 A Possible Sixth Cofactor	146
6.4 Defining Na ⁺ Translocation Through Acidic Residues	147
6.5 Defining Na ⁺ Binding Sites	149
6.6 Discovery of the First Na ⁺ Binding Site	149
6.7 Localization of the First Na ⁺ Binding Site in the Crystal Structure	151
6.8 Location of a Second Na ⁺ Binding Site	154
6.9 Perspectives	156
Acknowledgements	156
References	156
Chapter 7 The bc₁ Complex: A Physicochemical Retrospective and an Atomistic Prospective	161
<i>Antony R. Crofts, Charles A. Wilson, Stuart W. Rose, Sergei A. Dikanov and Rodney L. Burton</i>	
7.1 Introduction	161
7.2 Current Paradigm: The Monomeric Q-cycle Mechanism of the bc ₁ Complex	162
7.3 Control and Gating	164
7.4 The Marcus-Brønsted Mechanism for First Electron Transfer of the Q-cycle	167
7.5 The Dimer Interface	169
7.5.1 The ISP Subunit and Its Clamp	169
7.5.2 Electron Transfer Between the b _L Hemes	169
7.5.3 Coulombic Interactions Across the Interface	170
7.5.4 The 'void' Between the Monomers Seen in Crystallographic Structures	171
7.6 Recent Developments	172
7.6.1 A New Gating Mechanism in the First Electron Transfer	172
7.6.2 Dissecting the Second Electron Transfer	173
7.6.3 The Semiquinone Intermediate of the Bifurcated Reaction	173
7.6.4 A New Intermediate SQ _o Complex	173
7.6.5 How Is the Electron Pair in the SQ _o •.ISP ^H Complex Entangled?	176

7.7	Proton Release Associated with Q _o -site Turnover	177
7.8	A Model of the <i>Rb. sphaeroides</i> bc ₁ Complex for MD Simulation in a Native Membrane	180
7.8.1	The Q _o -site	183
7.8.2	The Q _i -site	186
	Acknowledgements	187
	References	187
Chapter 8	Advances in Understanding Mechanism and Physiology of Cytochromes bc	192
	<i>Arkadiusz Borek, Robert Ekiert and Artur Osyczka</i>	
8.1	Introduction	192
8.1.1	Overview of Cytochrome bc Complexes	192
8.1.2	Structure of Cytochrome bc ₁	193
8.1.3	Catalytic Cycle	195
8.1.4	Purpose of This Review	196
8.2	New Insights into Operation of the Q _o Catalytic Site	196
8.2.1	Electron and Proton Routes at the Q _o Site	196
8.2.2	Semiquinone at the Q _o Site and Its Involvement in Superoxide Generation	198
8.2.3	Testing the "Semireverse" Model of ROS Production Using Mitochondrial Mutations	202
8.2.4	Physiological Aspects of Superoxide Generation at the Q _o Site	202
8.2.5	Possible Role of Metastable State of Semiquinone: Rieske Cluster in Protection Against ROS	203
8.3	New Insights into Proton Transfer at the Q _i Site	205
8.4	Cytochrome bc ₁ as a Functional Dimer	208
8.5	Concluding Remarks	208
	Acknowledgements	209
	References	209
Chapter 9	Life and Death of Cytochrome c Oxidase: Influence of Subunit III on the D pathway, Proton Backflow and Suicide Inactivation	215
	<i>Shelagh Ferguson-Miller and Jonathan Hosler</i>	
9.1	Introduction	215
9.2	A Short Primer on Cytochrome c Oxidase	216
9.3	Subunit III Structure	218
9.3.1	Subunit III Binds Lipid in an Internal Cleft	219

9.3.2	Lipids of Subunit III Play a Key Role in the Subunit I-III Interaction	222
9.3.3	Connecting Subunit III to the Active Site Region of Subunit I	223
9.3.4	Relationship Between Subunit III and the D Pathway	224
9.3.5	Removal of Subunit III	224
9.4	Subunit III and the D Pathway	225
9.4.1	Normal D Pathway Structure and Function	226
9.4.2	Rapid Kinetic Analysis Reveals D Path Function	226
9.4.3	The pH Dependence of the D Pathway is Strongly Shifted in the Absence of Subunit III. Why?	228
9.4.4	Steady-state Proton Uptake in the Absence of Subunit III Can Report the pK_a and the Rate of D Pathway Proton Uptake	229
9.5	Subunit III & Proton Pumping	231
9.6	Subunit III & Suicide Inactivation	231
9.7	Mechanism of Suicide Inactivation	232
9.8	Structural Influence of Subunit III Helps Prevent SI, and Involves its Bound Lipids	236
9.9	The Histidines Near the Entrance of the D Pathway: Proton Antenna or Not?	238
9.10	Proton Backflow and SI	240
9.10.1	Identification of Proton Backflow	240
9.10.2	The Mutant D132A as a System to Study Proton Backflow	241
9.10.3	Proton Backflow <i>versus</i> Proton Exit	241
9.10.4	Functional Significance of Proton Backflow <i>In vivo</i>	242
9.10.5	Subunit III Appears to be Required for a Functional Proton Backflow Pathway	242
9.11	Subunit III and O ₂ Delivery	243
9.12	Summary	243

Chapter 10 Computational Means of Assessing Proton Pumping in Cytochrome *c* Oxidase (Complex IV)

Jessica M. J. Swanson

10.1	Introduction	249
10.2	Catalytic Cycle	252

10.3	Proton Pumping Mechanism	254
10.4	Simulating PT in Biomolecular Systems	255
10.5	Hydration and Proton Transport	256
10.6	Transport of the Pumped Proton	259
10.7	Transport of the Chemical Proton	261
10.8	Proton Transport through the D-Channel	264
10.9	Conclusions	267
	References	268
Chapter 11	Water Oxidation by PSII: A Quantum Chemical Approach	273
	<i>Per E. M. Siegbahn</i>	
11.1	Introduction	273
11.2	Methods and Models	277
11.3	Discussion	278
11.3.1	S-state Structures	279
11.3.2	O-O Bond Formation	281
11.3.3	Full Energy Diagram	283
11.3.4	The Effects of Tyr _z	286
11.3.5	The Importance of Calcium	288
11.3.6	Water Insertion in the S ₂ to S ₃ Transition	290
11.4	Summary	291
	Acknowledgements	292

Chapter 12	Respiratory Supercomplexes in Mitochondria	296
	<i>Giorgio Lenaz, Gaia Tioli, Anna Ida Falasca and Maria Luisa Genova</i>	
12.1	Introduction	296
12.1.1	The Respiratory Chain of Mitochondria	296
12.1.2	Organization of the Respiratory Chain: Historical Outline	298
12.2	Distribution and Composition of Respiratory Supercomplexes	300
12.2.1	Distribution in Different Organisms	300
12.2.2	Composition of Respiratory Supercomplexes	300
12.3	Supercomplex Association Provides a Kinetic Advantage	303
12.3.1	Structural Evidence	305
12.3.2	Evidence for Channelling in the Coenzyme Q Region	310
12.3.3	Electron Transfer Through Cytochrome c	318

12.4	Supercomplexes and Reactive Oxygen Species	321
12.5	Physiological and Pathological Implications	324
12.5.1	Supercomplexes and Regulation of Metabolic Fluxes	324
12.5.2	Supercomplexes and ROS Signalling	326
12.5.3	Supercomplexes in Pathology and Aging	327

Chapter 13	Structure, Mechanism and Regulation of ATP Synthases	338
	<i>John E. Walker</i>	
13.1	Introduction	338
13.2	Structure of ATP Synthases	339
13.2.1	Subunit Compositions	339
13.2.2	High Resolution Structure	342
13.3	Catalytic Mechanism of ATP Synthases	344
13.3.1	ATP Hydrolysis	344
13.3.2	Structural Description of the Rotary Catalytic Cycle	346
13.3.3	Generation of Rotation in the Membrane Domain	348
13.3.4	Role of Cardiolipin	351
13.3.5	Bioenergetic Cost of Making an ATP Molecule	351
13.4	Regulatory Mechanisms	353
13.4.1	Mitochondrial ATP Synthases	353
13.4.2	Bacterial ATP Synthases	356
13.5	Perspectives	359
13.5.1	Determination of Structures of ATP Synthases	359
13.5.2	The Catalytic Cycle and Rotary Mechanism	361
13.5.3	The Peripheral Stalk	362
13.5.4	The Mitochondrial Inhibitor Protein	364
13.5.5	ATP Synthase as a Drug Target	364
13.5.6	The Permeability Transition Pore	365
	Note Added in Proof	366
	Acknowledgements	366
