Section I: Principles and Analysis of Disulfide Bond Formation

Chapter 1.1	Disulfide Bonds in Protein Folding and Stability	3
	<i>Matthias J. Feige, Ineke Braakman and Linda M. Hendershot</i>	
1.1.1	Stabilization of Proteins by Disulfide Bonds	3
1.1.2	Disulfide Bonds in Protein Folding Reactions: Biophysical Considerations	8
1.1.3	Distinctions Between <i>In vitro</i> Refolding Assays and Protein Biosynthesis in a Cell	11
1.1.4	Disulfide Bonds in ER Protein Folding	14
1.1.5	Formation of Disulfide Bonds Between Sequential Cysteines	16
1.1.6	Disulfide Bonds Between Non-sequential, Often Long-range, Cysteines	17
1.1.7	Non-native Disulfide Bonds as a Prerequisite to Correct Protein Maturation	19
1.1.8	Disulfide Bonds, Protein Misfolding and Human Disease	20
1.1.9	Concluding Thoughts	24
	Acknowledgements	25
	References	25

Chemical Biology No. 9

Oxidative Folding of Proteins: Basic Principles, Cellular Regulation and Engineering

Edited by Matthias J. Feige

Chapter 1.2	Techniques to Monitor Disulfide Bond Formation and the Reduction Potential of Cysteine–Cystine Couples <i>In vitro</i> and <i>In vivo</i>	34
	<i>Christian Appenzeller-Herzog and Jan Riemer</i>	
1.2.1	Introduction	34
1.2.2	Examples of Biological Cysteine–Cystine Couples	37
1.2.3	Determination of Standard Reduction Potentials	39
1.2.4	<i>In situ</i> Cysteine–Cystine Distributions	41
1.2.5	Genetically Encoded Fluorescent Protein Sensors to Monitor Intracellular Redox Couples	43
1.2.5.1	General Principles	43
1.2.5.2	roGFP-based Sensors for the Monitoring of E_{GSH}	44
1.2.6	E_{GSH} Dynamics in Multicellular Organisms	45
1.2.7	Conclusions and Perspectives	46
	References	47
Chapter 1.3	Real-time Detection of Thiol Chemistry in Single Proteins	52
	<i>Edward C. Eckels, Daniel J. Echelman, Jaime Andrés Rivas-Pardo and Julio M. Fernández</i>	
1.3.1	Introduction	52
1.3.1.1	Single-molecule Pulling Instruments	53
1.3.1.2	Mechanical Fingerprints Provide Unambiguous Identification of Single-protein Tethers	55
1.3.2	Mechanochemical Cleavage of Cryptic Protein Disulfide Bonds	56
1.3.2.1	Disulfide Cleavage with Low Molecular Weight Thiols	59
1.3.2.2	Two Pathways for Disulfide Cleavage by the Hydroxyl Ion	60
1.3.2.3	Rules for Single-protein Thiol Chemistry Experiments	61
1.3.3	Enzymatic Cleavage of Protein Disulfide Bonds	61
1.3.3.1	Single-molecule Reduction by Thioredoxins	61

1.3.3.2 Prokaryotic and Eukaryotic Thioredoxins Demonstrate Alternative Mechanisms	63
1.3.4 Inferring Molecular Pathways of Oxidative Folding	64
1.3.4.1 A Single-molecule Assay for Oxidative Folding by Protein Disulfide Isomerase	64
1.3.4.2 DsbA is a High-efficiency Bacterial Oxidoreductase	68
1.3.4.3 Non-enzymatic Oxidative Folding	69
1.3.5 Conformational Changes and Allostery Through Cysteine Redox and Disulfide Isomerization	70
1.3.5.1 Disulfide Isomerization in Superoxide Dismutase 1 (SOD1)	71
1.3.5.2 S-Glutathionylation of Cryptic Thiols Regulates Muscle Elasticity	72
1.3.5.3 A Protein Thioester Responsible for Bacterial Adhesion	72
1.3.6 Conclusion	76
References	77
Chapter 1.4 Analysis of Disulfide Bond Formation in Therapeutic Proteins	81
<i>Daniel Weinfurtner</i>	
1.4.1 Introduction	81
1.4.2 Mechanisms of Disulfide Bond Misassembly and Degradation	82
1.4.2.1 Cleavage of Intra- and Interchain Disulfide Bonds	83
1.4.2.2 Disulfide Bond Scrambling	84
1.4.2.3 β -Elimination	84
1.4.2.4 Trisulfide Bond Formation	86
1.4.2.5 Oxidation, Cysteinylation and Glutathionylation	87
1.4.3 Analytical Methods	87
1.4.3.1 Electrophoretic Methods	88
1.4.3.2 Chemical Labeling and Spectroscopic Detection	88
1.4.3.3 Mass Spectrometry-based Methods	90
1.4.4 Conclusion and Outlook	95
References	96

Section II: Disulfide Bonds in Peptides and Proteins: Structure, Function and Evolution

Chapter 2.1	Evolutionary Adaptations to Cysteine-rich Peptide Folding	101
	<i>H. Safavi-Hemami, M. M. Foged and L. Ellgaard</i>	
2.1.1	Introduction	101
2.1.1.1	Cysteine-rich Peptides – a Large and Diverse Family	101
2.1.1.2	Scope of the Chapter: Evolutionary Adaptations to Conopeptide Folding	104
2.1.2	Conopeptide Folding – a Case Study	105
2.1.2.1	Conopeptides as Models for the Study of Cysteine-rich Peptide Folding	105
2.1.2.2	Conopeptide Size and Cysteine Content	105
2.1.2.3	Conopeptide Sequence and Structural Diversity	107
2.1.2.4	Overview of <i>In vitro</i> Challenges with Conopeptide Folding	110
2.1.3	Adaptations to Conopeptide Folding	110
2.1.3.1	The Role of the Propeptide in Conopeptide Folding	110
2.1.3.2	Post-translational Modifications	113
2.1.3.3	Molecular Chaperones and Folding Enzymes	114
2.1.4	Conclusions and Outlook	121
	Acknowledgements	122
	References	122
Chapter 2.2	<i>In vitro</i> Refolding of Proteins	129
	<i>Martin Haslbeck and Johannes Buchner</i>	
2.2.1	Introduction	129
2.2.2	Inclusion Bodies (IBs)	130
2.2.3	IB Preparation and Purification	132
2.2.4	Protein Refolding	134
2.2.4.1	Refolding Methods	134
2.2.4.2	The Multi-parameter Space of Protein Refolding	138
2.2.4.3	Formation of Correct Disulfide Bonds	142
2.2.5	The REFOLD Database	143

2.2.6 Screening for Suitable Refolding Conditions	143
2.2.7 Screening for Suitable Refolding Conditions Using Metal Chelate Chromatography	145
2.2.8 Activity Assays – the Heart of a Successful Refolding Screen	146
2.2.9 Conclusion	147
Acknowledgements	147
References	147
Chapter 2.3 Allosteric Disulfide Bonds	152
<i>Aster E. Pijning and Philip J. Hogg</i>	
2.3.1 Introduction	152
2.3.2 Evolution of Disulfide Bonds	153
2.3.3 Classification of Disulfide Bonds	153
2.3.4 Emerging Allosteric Configurations	156
2.3.5 Cleavage of Allosteric Disulfide Bonds	158
2.3.6 Processes That Are Controlled by Allosteric Disulfide Bonds	160
2.3.6.1 Hemostasis	160
2.3.6.2 Immune Response	164
2.3.6.3 Viral Entry	166
2.3.7 Targeting Disulfide Bonds	167
2.3.8 Future Perspectives	168
References	168

Section III: Oxidative Folding in the Cell

Chapter 3.1 Disulfide Bond Formation and Isomerization in <i>Escherichia coli</i>	177
<i>Marina Rubini, Goran Malojčić and Rudi Glockshuber</i>	
3.1.1 Introduction	177
3.1.2 Disulfide Bond Formation	178
3.1.2.1 The Periplasmic Dithiol Oxidase DsbA	178
3.1.2.2 DsbB	181
3.1.3 Disulfide Bond Isomerization	183
3.1.3.1 DsbC, a Thioredoxin-like Homodimer with Disulfide Isomerase and Disulfide Reductase Activity	183
3.1.3.2 Maintenance of the Reduced State of DsbC by the Electron Transport Catalyst DsbD in the Inner Membrane	189

3.1.3.3	DsbG, a Structural Homolog of DsbC with Sulfenic Acid Reductase Activity	193
3.1.3.4	The Cytochrome <i>c</i> Maturation Factor CcmG is a DsbD Substrate	194
3.1.4	Coexistence of the Oxidative Disulfide Bond Formation and the Reductive Disulfide Isomerization Pathways	195
3.1.5	The Dsb System as a Potential Target for New Antibacterial Drugs	197
3.1.6	Concluding Remarks	199
	Acknowledgements	199
	References	199
Chapter 3.2	Disulfide Bond Formation in Mitochondria	205
	<i>Johannes M. Herrmann, Bruce Morgan and Katja Hansen</i>	
3.2.1	Introduction	205
3.2.2	Protein Import into the IMS	206
3.2.3	Mia40, an Import Receptor in the IMS	207
3.2.3.1	Structural Elements That Are Present in All Mia40 Proteins	208
3.2.3.2	Kingdom-specific Domains in Mia40 Proteins	209
3.2.4	Erv1, a Sulfhydryl Oxidase in the IMS	209
3.2.4.1	Structural Organization of the Yeast Erv1	210
3.2.4.2	Structural Organization of the Other Erv1 Homologs	211
3.2.5	Protein Import and Folding by the Mitochondrial Disulfide Relay	211
3.2.5.1	Translocation of IMS Proteins Through the TOM Complex	212
3.2.5.2	Mia40 Promotes Protein Translocation into the IMS	213
3.2.5.3	Mia40 Promotes Oxidative Protein Folding in the IMS	214
3.2.6	Substrate Proteins of the Mitochondrial Disulfide Relay	214
3.2.6.1	Proteins of the Twin Cx ₃ C Family	215
3.2.6.2	Proteins of the Twin Cx ₉ C Family	216
3.2.6.3	IMS Proteins with Other Cysteine Patterns	216
3.2.6.4	Inner Membrane Proteins	217
3.2.7	Perspectives	217
	References	218

Chapter 3.3 Structural Insights into Disulfide Bond Formation and Protein Quality Control in the Mammalian Endoplasmic Reticulum	224
<i>Masaki Okumura, Satoshi Watanabe and Kenji Inaba</i>	
3.3.1 Introduction	224
3.3.2 U-shaped Overall Structures of PDI and ERp57	226
3.3.2.1 Redox-dependent Regulation of PDI Structure and Function	226
3.3.2.2 Regulated and Targeted PDI Oxidation by ER Oxidoreductin-1 (Ero1)	228
3.3.2.3 Possible Homodimerization of PDI	228
3.3.2.4 Structure, Function and Mechanism of ERp57	229
3.3.2.5 Structure and Possible Functions of ERp27	229
3.3.3 Structures and Functions of ERp46 and P5	231
3.3.3.1 Peroxiredoxin-4 (Prx4) is an Alternative Oxidase of PDIs	231
3.3.3.2 Overall Structure of ERp46, an Efficient Protein Disulfide Introducer	231
3.3.3.3 Schematic Structure and Possible Functions of P5	232
3.3.3.4 Modes of Interaction Between Prx4 and P5/ERp46	233
3.3.4 Structure, Function and Molecular Dynamism of ERdj5	233
3.3.4.1 The Highly Dynamic ERdj5 Adopts Two Alternative Conformations	233
3.3.4.2 Novel Function of ERdj5 as a Modulator of Ca^{2+} Concentration in the ER	236
3.3.5 ERp44 is a pH-sensing ESP Chaperone	236
3.3.5.1 ERp44 Serves as a Second Checkpoint in the Post-ER Pathway	236
3.3.5.2 ERp44 Has a Unique Structure	237
3.3.5.3 ERp44 Undergoes pH-dependent Regulation	239
3.3.5.4 Mechanism of Client Recognition by ERp44	241
3.3.6 Concluding Remarks	243
Acknowledgements	243
References	243

Chapter 3.4 Mechanisms of Oxidative Protein Folding and Thiol-dependent Quality Control: Tales of Cysteines and Cystines	249
<i>Tiziana Anelli and Roberto Sitia</i>	
3.4.1 Introduction	249
3.4.2 A Brief History of Protein Quality Control in the Early Secretory Pathway	250
3.4.3 Thiol-dependent Quality Control	251
3.4.3.1 Mechanisms of TDQC	251
3.4.3.2 TDQC: Looking for the Culprits	252
3.4.3.3 ERp44 Mediates TDQC	253
3.4.4 Two Sequential QC Steps in the Early Secretory Pathway (ESP)	254
3.4.5 Atomic Structure of ERp44: a Clever Clover	254
3.4.6 The Sophisticated Clientele of ERp44	256
3.4.6.1 IgM	257
3.4.6.2 Adiponectin	258
3.4.6.3 A Mechanism for Controlling the Localization of ER Enzymes	259
3.4.6.4 ERp44 TDQC: from the Substrate Point of View	260
3.4.7 A Multifunctional Protein with a Selected Clientele	261
3.4.8 Intersections Between TDQC and pH	261
3.4.9 Concluding Remarks	262
Acknowledgements	263
References	263
Chapter 3.5 Disulfide Bond Formation Downstream of the Endoplasmic Reticulum	267
<i>Deborah Fass and Tal Ilani</i>	
3.5.1 Introduction	267
3.5.2 Disulfide Rearrangements in the Golgi Apparatus	269
3.5.3 Dedicated Catalysts of Disulfide Bond Formation Downstream of the Endoplasmic Reticulum: the QSOX Family	271
3.5.3.1 QSOX Is a Golgi-localized and Secreted Catalyst of Disulfide Bond Formation	271
3.5.3.2 QSOX Mechanism and Activity	272
3.5.3.3 Function of QSOX in Cells and Organisms	274
3.5.4 Oxidation of Immunoglobulins Outside the ER	276

3.5.5 Extracellular PDI-mediated Disulfide Exchange in Neutrophil Adhesion and Thrombus Formation	278
3.5.6 Unpaired Cysteines in Extracellular Proteins	279
3.5.7 Conclusions and Perspectives	280
References	281

Section IV: Oxidative Folding and Cellular/Organism Homeostasis

Chapter 4.1 How Microbes Cope with Oxidative Stress <i>Francois Beaufay and Ursula Jakob</i>	287
4.1.1 Reactive Oxygen Species – an Inevitable Consequence of Aerobic Life	287
4.1.2 Oxidative Stress – an Effective Mammalian Host Defense Mechanism	288
4.1.3 Cellular Effects of Antimicrobial Oxidants	288
4.1.4 How Bacteria Cope with Antimicrobial Oxidants	289
4.1.4.1 Transcriptional Changes in Response to ROS and RCS	289
4.1.4.2 Metabolic Changes Upon ROS–Antimicrobial Oxidant Insults	293
4.1.4.3 ROS-mediated Activation of ATP- independent Molecular Chaperones	293
4.1.5 Inorganic Polyphosphate: a Potent Protector Against Oxidative Damage	296
4.1.5.1 PolyP Functions as a Potent Chaperone	297
4.1.5.2 PolyP Production During Oxidative Stress	297
4.1.5.3 The Many Other Hats of PolyP and Their Potential Roles in Oxidative Stress Protection	298
4.1.6 Oxidative Stress-protective Systems as Novel Drug Targets	299
4.1.7 Concluding Remarks	299
References	300
Chapter 4.2 Disulfide Bond Formation in the Endoplasmic Reticulum <i>B. V. O. Oka and N. J. Bulleid</i>	306
4.2.1 Introduction	306
4.2.2 Mechanism of Disulfide Formation in the ER	307

4.2.3 The Environment of the ER is Optimized for Protein Folding	308
4.2.3.1 The ER is a Repository for Folding Enzymes	308
4.2.3.2 ER Calcium Concentration and Relevance to Oxidative Folding	309
4.2.3.3 Glutathione Redox Buffer	309
4.2.4 PDI Enzymes: Catalysts of Oxidative Folding	310
4.2.4.1 Structure and Function of PDI	313
4.2.5 ER Oxidative and Reductive Pathways	315
4.2.5.1 The Ero1 Pathway	315
4.2.5.2 ER Peroxidases Utilise Hydrogen Peroxide to Promote Disulfide Formation	318
4.2.5.3 PrxIV Oxidative Pathway	319
4.2.5.4 Glutathione Peroxidase7/8 Pathway	321
4.2.5.5 Vitamin K Epoxide Reductase (VKOR) Pathway	323
4.2.5.6 The ER Reductive Pathway	324
4.2.6 Disulfide Exchange Between the PDI Proteins	325
4.2.7 Conclusion	327
Acknowledgements	327
References	328
Chapter 4.3 Redox Regulation of Hsp70 Chaperone Function in the Endoplasmic Reticulum	334
<i>Carolyn S. Sevier</i>	
4.3.1 Introduction	334
4.3.2 The ER-localized Hsp70 Chaperone System	336
4.3.2.1 BiP: an Hsp70 Molecular Chaperone	336
4.3.2.2 BiP Co-chaperones: J Proteins	338
4.3.2.3 BiP Co-chaperones: Nucleotide Exchange Factors (NEFs)	340
4.3.3 Modulating BiP Activity Under Oxidative Stress	342
4.3.3.1 Formation of a BiP Cysteine Adduct	342
4.3.3.2 Alterations to BiP Activities Upon Oxidation	345
4.3.3.3 Reduction of Oxidized BiP	346
4.3.4 Conclusions and Open Questions	348
References	349

Chapter 4.4	Thioredoxin and Cellular Redox Systems: Beyond Protein Disulfide Bond Reduction	355
	<i>Xiaoyuan Ren, Jun Lu and Arne Holmgren</i>	
4.4.1	Introduction	355
4.4.1.1	Trx Superfamily Proteins	356
4.4.1.2	The Thioredoxin System	357
4.4.1.3	The Glutaredoxin System	360
4.4.2	Functions of Trx and Grx Systems	361
4.4.2.1	Protein Disulfide Isomerization	361
4.4.2.2	Chaperone Activity	363
4.4.2.3	Antioxidant System	363
4.4.2.4	Electron Donors for RNR	364
4.4.2.5	Iron-Sulfur Clusters	365
4.4.3	Regulating Redox Signaling	367
4.4.3.1	The Concept of Redox Signaling	367
4.4.3.2	Redox Signaling Mediated by Trx Fold Proteins	369
4.4.4	Concluding Remarks	371
	References	372

Section V: Engineering Covalent Linkages in Peptides and Proteins

Chapter 5.1	Stabilization of Peptides and Proteins by Engineered Disulfide Bonds	381
	<i>Douglas B. Craig and Alan A. Dombkowski</i>	
5.1.1	Protein Disulfide Bonds	381
5.1.2	Considerations for Stability	382
5.1.3	Computational Techniques and Tools	384
5.1.3.1	Structure-based Design Tools	385
5.1.3.2	Neural Network-based Design Tools	387
5.1.3.3	Protein Engineering Suites	389
5.1.3.4	Validation of Engineered Disulfides	390
5.1.3.5	Tool and Suite Websites	391
5.1.4	Applications of Engineered Disulfide Bonds	391
5.1.4.1	Stabilization	391
5.1.4.2	Functional and Structural Characterization, Refinement, and Design	393
5.1.4.3	Crystallography and Structure	394
5.1.4.4	Vaccines, Immunology and Drugs	395
5.1.5	Conclusion	396
	References	396

Chapter 5.2 Genetic Code Expansion Approaches to Introduce Artificial Covalent Bonds into Proteins <i>In Vivo</i>	399
<i>Marko Cigler, Tuan-Anh Nguyen and Kathrin Lang</i>	
5.2.1 Expanding the Genetic Code	399
5.2.1.1 Site-specific Incorporation of Unnatural Amino Acids into Proteins	399
5.2.1.2 Orthogonal tRNA Synthetase-tRNA Pairs	400
5.2.1.3 Applications of Unnatural Amino Acids	402
5.2.2 Bioorthogonal Reactions for Covalently Modifying Proteins	404
5.2.2.1 Inverse Electron Demand Diels-Alder Cycloadditions for Fluorescently Labeling Proteins <i>In vivo</i>	405
5.2.2.2 Inverse Electron Demand Diels-Alder Cycloadditions for Controlling Enzyme Activity in Living Cells	407
5.2.3 Proximity-triggered Crosslinking	408
5.2.3.1 Unnatural Amino Acids for Proximity-triggered Crosslinking	409
5.2.3.2 Intramolecular and <i>In vitro</i> Intermolecular Proximity-triggered Protein Crosslinking	410
5.2.3.3 <i>In vivo</i> Intermolecular Crosslinking for Covalent Stabilization of Low-affinity Protein Complexes	414
5.2.4 Conclusion	416
References	417
Subject Index	421
