Foreword	v
Preface	vii
Chapter 1 Plant Cell Division and Its Regulation	1
1.1 Regulation of Plant Cell Cycle	3
1.1.1 Classification and Basic Events of Cell Cycle Progression	3
1.1.2 Key Regulators and Their Functions in Cell Cycle Progression	5
1.1.3 Important Molecular Events of Cell Cycle Progression	9
1.1.4 Phytohormones and Environmental Signals Regulating Cell Cycle	12
1.2 Regulation of Cell Division in Plant Organ Development	15
1.2.1 Correct Cell Cycle is the Premise of Normal Plant Growth and Development ...	16
1.2.2 The Coordination Between Cell Division and Cell Expansion in the Process of Plant Organ Development	18
1.2.3 Organ Size is Influenced by Duration of Cell Proliferation	20
1.3 Common Used Technologies and Methods in the Study of Plant Cell Division	23
1.3.1 Cell Suspension Culture System	23
1.3.2 <i>In vivo</i> Real-time Fluorescence Microscopic Observation	24
1.3.3 Chimeric Induced Expression System	25
Chapter 2 Cell Differentiation	29
2.1 The Basic Structure and Distribution of Stoma	30
2.2 Stomatal Development (in <i>Arabidopsis</i> and rice, for example)	31
2.3 Key Factors Regulating Stomatal Development	33
2.3.1 The Function of Transcription Factors in Stomatal Development	33
2.3.2 Signal Transduction During Stomatal Development	35
2.3.3 Intracellular Signal Transduction During Stomatal Development (MAPK Signal Cascade Amplification)	38
2.3.4 Effects of Phytohormones on Stomatal Development	41
2.3.5 The Establishment of Polarity During Stomatal Development	42
2.3.6 Study of miRNA-regulated Stomatal Development	44
2.3.7 The Effects of Environmental Factors on Stomatal Development	44
2.3.8 Cyclin-regulated Stomatal Development	46
2.4 Problems in Stomatal Development Research and Future Research Direction	46
2.4.1 Transcription Factors and Their Target Genes Will be the Main Aspects of Future Research on Stomatal Development	46
2.4.2 Researches on Signal Transduction Pathways of Stomatal Development Need to be Further Deepened	46

2.4.3	The Study of Relationship Between Plant Response to Stress and Stomatal Development Need to be Deepened	47
2.4.4	The Role of Phytohormones in Stomatal Development Will be a Hotspot in Future Research	48
Chapter 3	Mechanisms of Exocytosis and Endocytosis in Plant Cells	49
3.1	Introduction	50
3.2	Plant Cell Exocytosis	51
3.2.1	Formation and Transport of Exocytotic Vesicles	51
3.2.2	Tethering and Docking of Exocytotic Vesicles	55
3.2.3	Priming, Triggering and Fusion of Exocytotic Vesicles	56
3.3	Plant Cell Endocytosis	57
3.3.1	Clathrin-dependent Endocytosis Pathway	57
3.3.2	Clathrin-independent Endocytosis	61
3.3.3	Other Endocytotic Pathways	63
3.4	Research Progress	63
3.4.1	<i>Arabidopsis</i> R-SNARE Proteins VAMP721 and VAMP722 Mediated Secretory Transport from TGN to Plasma Membrane	64
3.4.2	<i>Arabidopsis</i> Synaptotagmin Protein SYT2 is Involved in Nonclassical Protein Secretion	65
3.4.3	Real Time Dynamics of Pollen Tubes Endocytosis and Exocytosis	66
3.4.4	<i>Arabidopsis</i> Lipid Raft Protein AtFlot1 is Involved in the Regulation of a Clathrin-independent Endocytotic Pathway	68
3.4.5	Single Molecular Study of Endocytotic Pathways in the Regulation of Plasma Membrane Functional Proteins	69
3.5	Research Technologies	70
3.5.1	Experimental Materials and Systems	70
3.5.2	Sample Labeling Technology	73
3.5.3	Imaging Technologies	78
Chapter 4	Pollen Tube Polarized Growth and Its Regulation	84
4.1	Cell Physiology of Pollen Tube Polarized Growth	87
4.1.1	Regulation of Cell Wall Composition and Plasticity	87
4.1.2	Ion Gradient and Its Function	91
4.1.3	Organization and Dynamic Regulation of Cytoskeleton	94
4.1.4	Vesicle Trafficking	99
4.2	Apical Plasma Membrane Localized Signal Molecules and Signal Pathways	102
4.2.1	Rac/Rop GTPase	102
4.2.2	Phospholipid Signal Molecules	105
4.2.3	Interactions Between Signal Pathways and Signal Network	107
Chapter 5	Trichome Development	111
5.1	Developmental Process and Regulatory Mechanism of <i>Arabidopsis</i> Trichome	111
5.1.1	Structure and Genesis of <i>Arabidopsis</i> Trichome	112

5.1.2 Regulatory Mechanism of <i>Arabidopsis</i> Trichome at Different Developmental Stages	112
5.2 Genesis and Regulatory Mechanism of Cotton Seed Trichome	126
5.2.1 Cotton Fiber Initiation	127
5.2.2 Fiber Elongation	128
5.2.3 Fiber Secondary Wall Thickening	131
5.2.4 Maturation	131
5.3 Common Used Research Methods on <i>Arabidopsis</i> Trichome and Cotton Fiber	132
5.3.1 Obtaining of <i>Arabidopsis</i> Trichome	132
5.3.2 Analysis of Trichome Distribution Pattern	133
5.3.3 Tracking of <i>Arabidopsis</i> Trichome Developmental Periods	134
5.3.4 Analysis of <i>Arabidopsis</i> Trichome Cell Cycle	135
5.3.5 Cell Morphological Analysis of <i>Arabidopsis</i> Trichome	135
5.3.6 Preparation and Observation of Cotton Ovules by Scanning Electron Microscopy	136
5.3.7 <i>In vitro</i> Culture of Cotton Ovules and Treatment of Various Hormones	137
Chapter 6 Genesis, Development and Apical Growth of Root Hair	139
6.1 Fate Determination of Epidermal Cells in Root Hair Zone	140
6.2 Root Hair Initiation	144
6.3 Apical Growth of Root Hairs	146
6.4 Maturation of Root Hairs	152
6.5 Cytoskeleton and Root Hair Growth and Development	152
6.5.1 Microtubule Cytoskeleton and Root Hair Growth and Development	152
6.5.2 Microfilament Cytoskeleton and Root Hair Growth and Development	156
6.6 Experimental Systems for the Study of Root Hairs	159
6.6.1 Root Hair Culture	159
6.6.2 Ca^{2+} Imaging Techniques in Root Hairs	159
6.6.3 Observation of Microfilament and Microtubule Cytoskeletons in Root Hairs	160
Chapter 7 Molecular Regulation of Plant Embryonic Development	165
7.1 Structure of Plant Embryo	166
7.2 Zygote Activation	168
7.3 Maternal-to-zygotic Transition	169
7.4 Polarity Establishment	170
7.5 Cell Fate Determination	171
7.6 Embryonic Pattern Formation	172
7.7 Establishment of Embryo Apical-basal Axis	174
7.8 Cotyledon Formation	175
7.9 Embryo-specific Genes	176
7.10 Suspensor Development	178
7.11 Endosperm Development	179

Chapter 8 Shoot Apical Meristem	181
8.1 Gene Expression in SAM	183
8.1.1 Omics Analysis of Gene Expression in SAM	183
8.1.2 Expression Positions and Mutant Phenotypes of Several Genes in SAM	184
8.2 Homeostatic Regulation of SAM	188
8.2.1 WUS and CLV3 Feedback Loop Regulates Shoot Apical/Inflorescence Meristem	189
8.2.2 The Feedback Loop Between AG and WUS Regulates the Determinateness of Floral Meristem	192
8.2.3 MiRNAs and miProteins Regulating SAM	196
8.2.4 Other Genes Regulating SAM	197
8.3 Hormones Regulating SAM	199
8.3.1 Cytokinin Regulating SAM	199
8.3.2 Auxin and Other Hormones Regulating SAM	204
Chapter 9 Root Development and Stem Cell Regulation	206
9.1 The Basic Structure of Roots and the Origin of Embryonic Development	207
9.1.1 Longitudinal Partition of the Root	207
9.1.2 The Hierarchical Organization of Root Radiant Surface	209
9.1.3 Origin of Root Embryonic Development	213
9.2 Signal Molecules Regulating Root Development	214
9.2.1 Auxin	214
9.2.2 Cytokinin	216
9.2.3 Other Hormones Regulating Root Development	217
9.2.4 Polypeptide Hormones	220
9.2.5 Reactive Oxygen Species and Redox Components	223
9.3 Important Transcription Factors Regulating Root Development	224
9.3.1 PLETHORA (PLT) and the Maintenance of Root Apical Stem Cells	224
9.3.2 WUS-RELATED HOMEODOMAIN (WOX) and QC Maintenance and Vascular Tissue Differentiation	225
9.3.3 SCARECROW (SCR) Gene and Cortical Cell Differentiation	225
9.3.4 SHORT ROOT (SHR) Gene and Cortical Cell Differentiation	226
9.3.5 Other Transcription Factors	226
9.4 Regulatory Network of Root Development	228
9.4.1 Positional Signal and Root Development	228
9.4.2 Effects of Nutritional Supply on Root Development	229
9.4.3 Interaction Between Rhizobia and Roots	229
Chapter 10 Flower Initiation	231
10.1 Biological Clock and Photoperiod Pathways	232
10.1.1 The Perception Mechanism of Plants to Changes in Light	233
10.1.2 Conversion of Light Signals	234
10.1.3 Transmission of Flowering Signal and Discovery of Florigen	236

10.1.4	Florigen Induces Flowering in SAM	237
10.1.5	Photoperiod Regulating Flowering of Short-day Light Plants	238
10.1.6	Photoperiod Regulating Long-day Light Cereal Plants	240
10.2	Vernalization and Autonomous Pathways	241
10.2.1	Studies on Molecular Mechanism of <i>Arabidopsis</i> Vernalization	241
10.2.2	Studies on the Regulatory Mechanism of Cereal Plant Vernalization	244
10.2.3	Autonomous Flowering Pathways Regulating <i>FLC</i> Gene	245
10.3	Perception of the Vernalization Signal	247
10.3.1	Perceptive Organs of the Vernalization Signal	248
10.3.2	Cellular Perception of the Vernalization Signal	249
10.4	Gibberellin Pathway	250
10.5	Ambient Temperature Affecting Flowering	252
10.6	Developmental Age Regulatory Pathway	253
Chapter 11	Floral Organ Determination	255
11.1	The Origin of Angiosperm Flowers	257
11.2	Floral Development	260
11.2.1	IM Initiation	261
11.2.2	FM Initiation	262
11.2.3	Determination of Floral Organ Attributes	264
11.3	Theoretical Models of Floral Development	264
11.3.1	ABC Model of Floral Development	264
11.3.2	MADS-box Transcription Factor Family	267
11.3.3	ABCDE Model of Floral Development	268
11.3.4	Tetramer Model of Floral Development	269
11.4	MADS-box Gene Family and Molecular Mechanisms of Angiosperm Floral Organ Development	271
11.4.1	<i>SQUA/ABI</i> Subfamily	271
11.4.2	<i>DEF/AP3</i> and <i>GLO/PI</i> Subfamilies	273
11.4.3	<i>AG</i> Subfamily (C/D)	274
11.4.4	<i>SEP</i> Subfamily	276
11.5	MiRNA Regulating the Formation of Floral Organs	278
11.5.1	MiRNA169	278
11.5.2	MiRNA159	278
11.5.3	MiRNA319	280
11.5.4	MiRNA167 and miRNA160	281
11.5.5	MiRNA164	281
11.5.6	MiRNA165/miRNA166	282
11.6	Other Genes Involved in the Genesis of Floral Organs	283
11.7	Targets of Floral Organ-specific Genes	285
	References	287
	Index	287
