Introduction	xi
-------------------------------	----

Philippe GRANDCOLAS

Chapter 1. From Richard Owen to Charles Darwin: Understanding the Origin of Life's Diversity	1
---	---

Claudine COHEN

1.1. Introduction	1
1.1.1. The legacy of German <i>Naturphilosophie</i>	3
1.1.2. French debates over the unity and diversity of living beings.	5
1.2. Richard Owen, the archetype and the diversity of vertebrates	6
1.2.1. From archetypes to ancestors: Darwin as a reader of Richard Owen	8
1.3. Conclusion	10
1.4. Bibliography	11

Chapter 2. Life Engineering in an Evolutionary World	15
---	----

Thomas HEAMS

2.1. Why "Engineers"?	15
2.2. The animal-machine legacy	16
2.3. Genetic engineering: rational design or tinkering?	18
2.4. Synthetic biology as the paradigm of bioengineering.	19
2.5. Transforming a transformation?	21
2.6. Our cousins, the engineers	23
2.7. Engineering and evolutionary dynamics.	24
2.8. Bibliography	26

Chapter 3. The View of Systematics on Biodiversity	29
Philippe GRANDCOLAS	
3.1. Introduction	29
3.2. Species: all different.	30
3.3. How about studying the other 90%?	32
3.4. Biodiversity changes	34
3.5. Challenging decades.	35
3.6. Bibliography	36
Chapter 4. Which Model(s) Explain Biodiversity?	39
Guillaume ACHAZ	
4.1. Birth–death processes	41
4.2. Coalescent trees	46
4.3. Birth–death and/or coalescent model?	54
4.4. Acknowledgements	56
4.5. Bibliography	56
Chapter 5. Analysis of Microbial Diversity: Regarding the (Paradoxical) Difficulty of Seeing Big in Metagenomics	63
Chloé VIGLIOTTI, Philippe LOPEZ and Eric BAPTESTE	
5.1. Introduction	63
5.2. Comparing metagenomic data sets is difficult.	65
5.3. Path dependency and knowledge production	68
5.4. Standardizing metagenomics	73
5.5. Unlocking metagenomics	75
5.6. Conclusion	78
5.7. Acknowledgements	79
5.8. Figure legends	80
5.8.1. Figure 5.1. Impact of the sequencing method on the taxonomic composition of lizard microbiota.	80
5.8.2. Figure 5.2. Hypothetical sequence of the stages making it possible to acquire knowledge in a scientific discipline, adapted from Sydow <i>et al.</i>	80
5.8.3. Figure 5.3. Connected components from a similarity network between reads of a lizard intestinal microbiome	81
5.9. Bibliography	81

Chapter 6. Genetic Code Degeneracy and Amino Acid Frequency in Proteomes	89
Jean LEHMANN	
6.1. Introduction	89
6.2. Frequency-mass correlation of encoded amino acids	92
6.3. Amino-acid volume correlation in the genetic code	93
6.4. Origin of genetic code degeneracy	96
6.5. Origin of the frequency-mass correlation	100
6.6. Summary and discussion	102
6.7. Conclusion	104
6.8. Acknowledgments	104
6.9. Bibliography	105
 Chapter 7. Telomeres and Telomerases: Structural Diversity for the Same Role	 109
Carole SAINTOMÉ	
7.1. Introduction	109
7.2. Nature of chromosome extremities	111
7.3. Telomeres in eukaryotes	112
7.3.1. Structures of sequences rich in G: G-quadruplexes	112
7.3.2. t-loop	114
7.3.3. Proteins at telomeres	114
7.4. Maintenance of telomeres by telomerase in eukaryotes	116
7.4.1. Structure of the catalytic subunit: very conserved domain of the RT	117
7.4.2. RT stretching mechanism	117
7.4.3. RNA subunit structure	118
7.5. Bibliography	121
 Chapter 8. Globalization and Infectious Diseases	 123
Thierry WIRTH	
8.1. Introduction	123
8.2. Origins of tuberculosis	125
8.3. Emergence of MDR-Beijing lineage	126
8.4. <i>Staphylococcus aureus</i> and globalization	130
8.5. Intensive farming and its distorting practices	130
8.6. Success of an American clone	132
8.7. Typhoid fever	132
8.8. Indian diaspora and emergence of a new pathogen	133
8.9. Prospects	135
8.10. Bibliography	135

Chapter 9. Why are *Morpho* Blue? 139

Vincent DEBAT, Serge BERTHIER, Patrick BLANDIN, Nicolas CHAZOT,
Marianne ELIAS, Doris GOMEZ and Violaine LLAURENS

9.1. Introduction	139
9.2. Structural explanation: the iridescent blue in <i>Morpho</i> is a physical color	142
9.2.1. Scale structure	147
9.2.2. Scale development	150
9.3. Historical explanation: evolutionary origin of blue color in <i>Morpho</i>	152
9.3.1. Color variation in the genus <i>Morpho</i>	152
9.4. Functional explanation: the role of selection in the evolution of <i>Morpho</i> color	156
9.4.1. Thermoregulation	156
9.4.2. Hydrophobia	157
9.4.3. Signaling to predators: a confusing effect?	157
9.4.4. Signaling to predators: an aposematic blue?	159
9.4.5. Sexual selection	160
9.4.6. Different natural selection between sexes?	162
9.4.7. And the lack of blue?	162
9.5. Conclusions and open questions	164
9.6. Acknowledgments	164
9.7. Bibliography	165

**Chapter 10. Biodiversity in Natural History Collections:
a Source of Data for the Study of Evolution** 175

Romain NATTIER

10.1. Introduction	175
10.2. Description of biodiversity	177
10.2.1. Identification, comparison with specimen types	177
10.2.2. Phylogenetic position	177
10.2.3. Delimitation of species	178
10.3. Ecological and evolutionary processes on a population level	178
10.4. Ecological and evolutionary processes on a phylogenetic scale	180
10.5. Conclusion	181
10.6. Acknowledgements	182
10.7. Bibliography	182

Chapter 11. Mice and Men: an Evolutionary History of Lassa Fever	189
Aude LALIS and Thierry WIRTH	
11.1. Symptoms and methods of prevention	190
11.2. Towards a better understanding of the viral reservoir: phylogenetic systematic gene flow and phenotypic variation.	193
11.3. Lassa virus, molecular evolution and dating	203
11.4. Role of armed conflicts and refugee movements in the spread of Lassa fever in West Africa	204
11.5. Viral epidemiology: towards an integrated approach	205
11.6. Bibliography	206
Chapter 12. Evolutionary History of Moles in Western Europe: One Mole May Hide Another!	213
Violaine NICOLAS, Jessica MARTINEZ-VARGAS and Jean-Pierre HUGOT	
12.1. An unexpected biodiversity	213
12.2. A new mole species in France and Spain?	215
12.2.1. Mitochondrial DNA: three lineages of <i>T. europaea</i>	216
12.2.2. Nuclear DNA: <i>T. europaea</i> is paraphyletic	217
12.2.3. Morphological analysis: a new mole species	219
12.3. Factors affecting the geographical distribution of the species in France.	220
12.4. Bibliography	223
Chapter 13. The Conoidea and Their Toxins: Evolution of a Hyper-Diversified Group.	227
Nicolas PUILLANDRE and Sébastien DUTERTRE	
13.1. General introduction and state of the art	227
13.1.1. Systematics.	228
13.1.2. Toxinology.	230
13.2. Recent developments in systematics	234
13.2.1. Species delimitation.	234
13.2.2. Phylogeny and classification	237
13.3. Toxins: genomic, transcriptomic and proteomic approaches	238
13.3.1. Methodological developments	239
13.3.2. Recent discoveries.	241
13.4. Evolution of Conoidea: integrative approaches	242
13.5. Bibliography	244

Chapter 14. The Anthropocene: a Geological or Societal Subject?	251
Patrick DE WEVER and Stan FINNEY	
14.1. A new "geological era"?	253
14.2. Criteria to distinguish the Anthropocene	255
14.3. Why is the issue of the Anthropocene being imposed?	260
14.4. Conclusion	261
14.5. Bibliography	263
