Contents

Chapter 1 **Decoding Atomic Addresses: Solution NMR Resonance Assignment of Proteins** **1**
Thibault Viennet, Abhinav Dubey, Ricarda Törner, Maxim A. Droemer, Paul Coote, Dominique P. Frueh, Koh Takeuchi and Haribabu Arthanari

1.1 Deciphering Resonance Assignment: The What, Why and How? 1
1.2 Routine Backbone Assignment 4
1.2.1 Backbone Sequential Walk for Small Proteins (<25 kDa) 4
1.2.2 Backbone Sequential Walk for Larger Proteins (>25 kDa) 7
1.2.3 Amino Acid Type Identification and Resonance Assignment 9
1.2.4 Selective Isotopic Labeling and Unlabeling of Individual Amino Acid Types 12
1.2.5 Secondary Structure Assessment 13
1.3 Routine Side-chain Assignment 14
1.3.1 Assignment of Aliphatic Spin Systems 14
1.3.2 Choice of the TOCSY Sequence 16
1.3.3 Assignment of Aromatic Spin Systems 18
1.4 New Frontiers in Backbone Resonance Assignment of Proteins 19
1.4.1 Metabolic Labeling Using Pyruvate to Mitigate ^{13}C Homonuclear Coupling 20

New Developments in NMR No. 30
Integrated Structural Biology
Edited by Tatyana Polenova, Caitlin M. Quinn and Angela M. Gronenborn
© The Royal Society of Chemistry 2024
Published by the Royal Society of Chemistry, www.rsc.org

1.4.2 Incorporating Additional Information on the CA Resonance by Band-selective CA/CB Decoupling 21
1.5 New Developments for Side-chain Assignment 23
1.5.1 New Ideas for Side-chain Assignment 23
1.5.2 Structure-guided Assignment of Methyl Groups 24
1.6 Covariance NMR for Resonance Assignment 26
1.7 Strategies for Assignment of Intrinsically Disordered Proteins 28
1.7.1 Higher Dimensionality Experiments 28
1.7.2 ^{13}C-direct Detected Strategies for Resonance Assignment 30
1.7.3 Direct ^{15}N Detection: Exploiting Slow Relaxation Properties and Absence of Homonuclear Coupling for Enhanced Resolution at High Magnetic Fields 31
1.8 Conclusion 32
References 33

Chapter 2 Solid-state NMR Spectroscopy and Dynamic Nuclear Polarization 43
N. Schröder, E. Bartalucci, B. Uluca Yazgi and T. Wiegand

2.1 Introduction 43
2.2 Basics of Biomolecular Magic-angle Spinning NMR 45
2.3 Sample Preparation for Solid-state NMR and DNP 49
2.4 Recent Advances in Solid-state NMR 51
2.4.1 Proton Detection at Fast MAS 51
2.4.2 High Static Magnetic Fields 53
2.4.3 Large Proteins and Protein Complexes 53
2.4.4 Membrane Proteins 54
2.4.5 Protein–Nucleic Acid Interactions 55
2.5 Recent Advances in DNP 56
2.6 Integrated Structural Biological Approaches 59
2.6.1 Solid-state NMR and Cryo-electron Microscopy 59
2.6.2 Solid-state NMR and X-ray Crystallography 62
2.6.3 Solid- and Solution-state NMR 62
2.6.4 Solid-state NMR and EPR 63
2.6.5 Solid-state NMR and MD 65
2.6.6 DNP in Concert with Integrated Structural Biology 66

2.7 Conclusions 67
Abbreviations 67
Acknowledgements 68
References 68

Chapter 3 Electron Paramagnetic Resonance in Structural Biology 77
Alexey Bogdanov and Daniella Goldfarb

3.1 Introduction 77
3.2 EPR Techniques 78
3.2.1 CW-EPR 79
3.2.2 Pulsed Dipolar EPR (PD-EPR) Spectroscopy 80
3.3 The Spin Labeling Revolution 86
3.3.1 New Nitroxide Derivatives 90
3.3.2 Trityl Spin Labels 90
3.3.3 Gd(III) Spin Labels 93
3.3.4 Cu(II) Spin Labels 95
3.3.5 Mn(II) Spin Labels 97
3.3.6 Orthogonal Labeling 98
3.3.7 ENDOR with ^{19}F and Spin-labeled Proteins 100
3.3.8 *In Silico* Labeling 102
3.4 From Distance Distribution to Structure 103
3.5 Rapid Freeze Quench (RFQ) and PD-EPR 106
3.6 In-cell PD-EPR 107
3.7 EPR in Integrated Structural Biology 113
3.7.1 smFRET and PD-EPR Comparison and Complementarities 113
3.7.2 PD-EPR and NMR 114
3.7.3 PD-EPR and SAXS 115
3.7.4 PD-EPR and cryo-EM 117
3.8 Outlook 117
Acknowledgements 118
References 118

Chapter 4 Cryo-electron Microscopy and Tomography: Aiming for Atomic Resolution in Macromolecular Assemblies and Entire Cells 131
Tao Ni, Zhen Hou and Peijun Zhang

4.1 Introduction 131
4.1.1 Cryo-electron Microscopy and Tomography 131
4.1.2 *In Situ* Cellular Cryo-electron Tomography 135
4.2 Workflow of Cryo-EM SPA and Cryo-ET STA 136

4.3 Sample Preparation 136
4.3.1 Sample Preparation for Isolated Particles 136
4.3.2 Sample Preparation for Cells and Tissues 137
4.4 Cryo-EM SPA Data Collection and 3D Reconstruction 138
4.5 Cryo-ET Data Collection and Tomogram Reconstruction 138
4.6 Subtomogram Averaging for Structure Determination 140
4.6.1 Overall Pipeline of Subtomogram Averaging 140
4.6.2 Three-dimensional Subtomogram Classification 141
4.7 Examples 141
4.7.1 Ribosomes Under Cryo-EM and Cryo-ET 141
4.7.2 Viruses Under Cryo-ET 144
4.7.3 Protein Aggregates and Liquid–Liquid Phase Separation Under Cryo-ET 147
4.8 Challenges for High-resolution Subtomogram Averaging *In Situ* 149
4.9 Conclusions and Future Perspectives 150
Conflict of Interest Statement 150
Acknowledgements 150
References 151

Chapter 5 In-cell Structural Biology Through the Integration of Solution NMR Spectroscopy and Computational Science 155
Yutaka Ito, Teppei Ikeya and Kohsuke Inomata

5.1 In-cell NMR Spectroscopy of Proteins 155
5.2 Intracellular Environment and Behaviours of Bio-macromolecules 156
5.2.1 Influence of the Intracellular Environment on the Folding Stability of Proteins 157
5.2.2 All-atom Molecular Dynamics Simulations for Investigating the Folding Stability of Proteins 159
5.2.3 Influence of the Health Condition of Cells on the Folding Stability of Proteins 160
5.2.4 Influence of the Intracellular Environment on the Three-dimensional Structure of Proteins 160

5.2.5 Heterogeneity of the States of Proteins in Cells 171
5.2.6 In-cell ^{19}F-NMR Spectroscopy 171
5.3 Concluding Remarks 172
Acknowledgements 173
References 174

Chapter 6 Solid-state NMR-based Integrative Structural Methods for Protein and Viral Assemblies 178
Orr S. Lusky and Amir Goldbourt

6.1 Introduction 178
6.2 Integration of ssNMR with X-ray Diffraction 182
6.3 Integration of ssNMR with Cryo-EM 183
6.3.1 Integrative Approach for the Determination of the Filamentous Structure of the Type-III Secretion System (T3SS) 184
6.3.2 Determination of the Filamentous Structure of Apoptosis-associated Speck-like Protein Filaments 186
6.3.3 Determination of the Microtubule-bound TAU Protein Conformation 186
6.4 Integration of ssNMR with MD 187
6.5 Integration of ssNMR with SAXS 189
6.6 Integrative Structural Virology 190
6.6.1 Capsid Tubes of the Human Immunodeficiency Virus: Combining ssNMR, MD and Cryo-EM 190
6.6.2 Dynamics in the Tubular and Conical Tubes of HIV: Combining ssNMR, MD and DFT 191
6.6.3 The Structure of the M13 Filamentous Bacteriophage: Combining ssNMR, Fibre Diffraction and Rosetta Modelling 192
6.6.4 Combining ssNMR and SAXS to Study Filamentous Phage Structures on Multiple Length Scales 193
6.6.5 The Structure of the Icosahedral Bacteriophage AP205: Combining ssNMR, X-ray and Cryo-EM 194
6.7 Summary 195
References 195

Chapter 7 Time-resolved Crystallography on Protein Photoreceptors and Enzymes 203
Marius Schmidt

7.1 Background 203
7.2 Crystallography 204
7.3 Time-resolved Crystallography 205
7.3.1 The Basics 205
7.3.2 Structure Determination from Difference Maps 206
7.3.3 The Laue Method 208
7.4 Single-pulse TRX with the Laue Method (TRLX) 209
7.4.1 TRLX on Myoglobin and Photoactive Yellow Protein 211
7.4.2 Myoglobin 212
7.4.3 Photoactive Yellow Protein 212
7.5 Crystallography at XFEL Facilities 215
7.6 Time-resolved Serial Femtosecond Crystallography 219
7.6.1 The Early Experiments 219
7.6.2 Femtosecond TR-SFX 222
7.6.3 The Pr to Pfr Transition in Bacteriophytochromes 223
7.7 Enzymology with Mix-and-inject Time-resolved Serial Crystallography 224
7.8 Serial Crystallography at Synchrotron Light Sources 226
Acknowledgements 227
References 227

Chapter 8 Integrative Structural Biology of Enzyme Active Sites 241
Rittik K. Ghosh, Jacob B. Holmes, Michael F. Dunn and Leonard J. Mueller

8.1 Introduction 241
8.2 A Focus on Enzyme Catalysis 242
8.3 Case Study: Structure and Inhibition in Tryptophan Synthase 243
8.3.1 Mechanism 244
8.3.2 Framework Structure: X-ray Crystallography 244
8.3.3 Chemical Structure: NMR Spectroscopy 246
8.3.4 Chemically-rich Structure: Adding First-principles Computational Chemistry 250

8.3.5 Mechanistic Implications 252
8.3.6 Additional Intermediates in the TS Catalytic Cycle 253
8.4 A Select Survey of Integrative Studies in Enzyme Systems 254
8.4.1 ^{51}V NMR Crystallography of Vanadium Chloroperoxidase 254
8.4.2 Novel Nucleotide Binding Modes for the ABC Exporter MsbA 255
8.4.3 Integrative Dynamics of the Protein–Water Network in the Active Site of Human Carbonic Anhydrase II 256
8.4.4 Structure and Functional Control of TET2 *Via* Integrated NMR and Cryo-EM 258
8.4.5 Paramagnetic NMRX: Picometer Resolution of the Coordination Sphere in the Metal-binding Site of SOD 1 261
8.5 Conclusion: Integrative Structural Biology and Mechanistic Enzymology 262
Abbreviations 263
Acknowledgements 263
References 263

Chapter 9 Mechanistic Studies of Membrane Proteins Using Integrated Solid-state NMR and Computational Approaches 268
Swantje Mohr, Yessenbek K. Aldakul, Han Sun, Henry Sawczyc and Adam Lange

9.1 Introduction 268
9.2 Methodology 272
9.2.1 Biological Membranes and Model Membrane Systems 272
9.2.2 Solid-state NMR 277
9.2.3 MD Simulations 282
9.3 Applications 284
9.3.1 Ion Channels 285
9.3.2 Rhomboid Proteases 287
9.4 Conclusion and Future Perspectives 290
Acknowledgements 290
References 291

Chapter 10 Structural Elucidation Based on Photo-CIDNP NMR 301
Jörg Matysik, Yunmi Kim, Patrick Kurle-Tucholski, Guzel Musabirova, Ruonan Qin and A. Alia

10.1 Photo-CIDNP: History and Spin-dynamics 301
10.1.1 Production of Nuclear Hyperpolarization 302
10.1.2 Redistribution of Nuclear Hyperpolarization 308
10.2 Photo-CIDNP NMR in the Liquid State 309
10.2.1 Exploring Protein Surfaces with Solution NMR 309
10.2.2 Recent Liquid-state Photo-CIDNP NMR Studies 311
10.3 Range of Experiments 312
10.4 Photo-CIDNP MAS NMR on RCs of *Rhodobacter sphaeroides* 313
10.5 Photo-CIDNP MAS NMR on RCs of Other Bacteria 316
10.6 Photo-CIDNP MAS NMR on RCs of Algae and Plants 318
10.7 Photo-CIDNP MAS NMR on Flavoproteins 319
10.8 Perspectives 320
Acknowledgements 320
References 321

Chapter 11 Unsupervised Refinement of Protein Structures 327
Alexander J. Bryer, Juan S. Rey, Chaoyi Xu, Jodi A. Hadden-Perilla and Juan R. Perilla

11.1 Introduction 327
11.1.1 Cryo-EM and Protein Structure Determination 327
11.1.2 NMR and Protein Structure Determination 329
11.1.3 MolProbity: Knowledge-based Scoring of Protein Structure 329
11.1.4 An Integrative Approach for Protein Structure Refinement 331
11.2 Approach 332
11.2.1 Structure Refinement Using MolProbity and Cryo-EM Densities 332
11.2.2 Structure Refinement Using MolProbity and NMR Restraints 335

11.3 Example Applications 337
11.3.1 Manual Mode: User-guided Refinement Using Cryo-EM Densities 337
11.3.2 Automated Mode: Unsupervised Refinement Using Cryo-EM Densities 338
11.3.3 Automated Mode: Unsupervised Refinement Using NMR Restraints 339
11.4 Conclusions 343
Code Availability 343
Acknowledgements 344
References 344

Chapter 12 RNA Heterogeneity Visualized Under AFM **348**
J. Ding, J. R. Stagno, P. Yu, S. Li, K. P. Sapkota, J. Zhang and Y.-X. Wang

12.1 Introduction 348
12.2 AFM-guided RNA Sample Purification 350
12.3 AFM-guided Sample Conditioning 354
12.3.1 Salt Concentration 354
12.3.2 Mg^{2+} Concentration 356
12.3.3 Annealing Procedure 357
12.3.4 Freezing and Thawing 359
12.4 Case Study 359
12.4.1 AFM-guided rCbl Sample Preparation 359
12.4.2 Ensemble Averaging Methods *vs.* Heterogeneous Conformations 362
12.4.3 Recapitulated 3D Topological Structural Models from AFM Particle Images 363
12.4.4 Dimer, Monomer, or Both: What is Really Happening in Solution 364
12.5 Conclusions 365
Acknowledgements 366
References 366

Subject Index **370**
