

Contents

Foreword	vii
Preface	ix
1. Introduction	1.1
Birth of Molecular Genetics	1.1
Mendelism Down to Molecular Level	1.2
Sperm RNAs are delivered to Oocytes at Fertilization	1.3
Nature, Structure and Organization of the Genetic Material	1.3
Gene Structure, Function and Expression	1.3
Gene Regulation	1.4
Applying Knowledge about Genetic Material and Genes	1.4
References	1.4
Problems	1.4
2. Nature of the Genetic Material	2.1
Characteristics of Genetic Material	2.1
Discovery of DNA as Genetic Material	2.2
Discovery of RNA as Genetic Material	2.5
Viral Genomes	2.7
Latent Viruses	2.9
References	2.10
Problems	2.10
3. Structure of the Genetic Material	3.1
Structure of DNA	3.1
Alternate Structural Forms of DNA	3.6
Structure of RNA	3.13
Fundamental Properties of Genetic Material	3.15
References	3.17
Problems	3.18
4. Extranuclear Genomes	4.1
Chloroplast Genomes	4.1
Mitochondrial Genomes	4.3
Kinetoplast DNA	4.7
Centriole DNA	4.9
Cyanelle DNA	4.9
Promiscuous DNA	4.10
Coupled Expression of Nuclear and Organelle Genomes	4.11
References	4.11
Problems	4.14
Human Leukocyte Antigen Complex	4.14

5. Organization of the Genetic Material	5.1
DNA Kinetics	5.1
Organization of Genetic Material	5.8
Prokaryotic Genome	5.10
Eukaryotic Genome	5.10
Repeated DNA Sequences and Diseases	5.19
<i>References</i>	5.20
<i>Problems</i>	5.20
6. Packaging of Nucleic Acids	6.1
DNA Packaging in Viruses/Bacteriophages	6.1
DNA Packaging in Bacteria	6.3
DNA Packaging in Nucleus of Eukaryotic Cells	6.6
DNA Packaging in Eukaryotic Organelles	6.19
<i>References</i>	6.19
<i>Problems</i>	6.22
7. Replication of Nucleic Acids	7.1
Different Modes of DNA Replication	7.1
DNA Replication in Prokaryotes	7.1
Steps of DNA Replication	7.6
Plasmid Replication	7.12
Replication in Viruses	7.12
DNA Replication in Eukaryotic Nuclear Chromosomes	7.12
Replication of Mitochondrial DNA	7.24
Replication of Chloroplast DNA	7.25
Models of DNA Replication	7.26
Duplication of RNA	7.28
Polymerase Chain Reaction	7.29
<i>References</i>	7.30
<i>Problems</i>	7.32
8. Genetic Recombination	8.1
DNA Recombination in Bacteriophages	8.1
DNA Recombination in Bacteria	8.1
DNA Recombination in Eukaryotes	8.4
Types of Recombination	8.8
Models of Genetic Recombination	8.10
Crossing Over Event	8.17
Gene Conversion	8.18
Genetics and Enzymology of Recombination	8.20
Mitochondrial DNA Recombination	8.23
Chloroplast DNA Recombination	8.23
Intragenic Recombination	8.23
RNA Recombination	8.25
<i>References</i>	8.28
<i>Problems</i>	8.30

9. Mutation	9.1
Classification of Mutations	9.1
Detection of Mutations	9.17
Molecular Basis of Mutation	9.27
Site-directed Mutagenesis	9.41
In Vitro Mutagenesis	9.42
Mutagenesis in Organelle Genomes	9.42
Usefulness of Studies on Mutations	9.44
Environmental Mutagenesis	9.46
References	9.47
Problems	9.49
10. DNA Transposition	10.1
General Characteristics of Transposons	10.1
Bacterial Transposable Elements	10.3
Transposable DNA Phages	10.4
Eukaryotic Transposable Elements	10.5
Transposon Mutagenesis	10.18
Illegitimate Recombination	10.18
Mechanism of Transposition	10.20
Role of Transposons	10.23
Uses of Transposons	10.24
Limitations of Transposons	10.25
Mobile Elements and Genome Evolution	10.25
References	10.25
Problems	10.27
11. DNA and Non-DNA Repair Mechanisms	11.1
DNA Damage Checkpoints and Response	11.1
DNA Repair Mechanisms in Prokaryotes	11.1
DNA Repair Mechanisms in Eukaryotes	11.20
Diseases due to DNA Repair Defects	11.34
References	11.37
Problems	11.40
12. Gene Structure	12.1
Gene Concept	12.1
Types of Genes	12.6
Defining Gene?	12.18
Introns	12.19
Why are the Eukaryotic Genes Split?	12.21
Overlapping Genes	12.23
Pseudogenes	12.24
Colinearity	12.24
References	12.28
Problems	12.30
13. Defense Genes	13.1
Immunoglobulin Genes	13.1
Human Leukocyte Antigen Complex	13.8

1.5	Oncogenes	13.10
0.1	Proto-oncogenes	13.18
0.17	Epigenetic Alterations and Neoplasia	13.20
0.27	How Immune System Counteracts Oncogenes?	13.22
0.41	Antioncogenes	13.22
0.42	Antisense Molecules as Anticancer Drugs	13.23
0.42	References	13.24
0.44	Problems	13.26
14.	Gene Organization	14.1
0.46	Gene Families	14.1
10.1	Changes in Genome Size	14.10
10.1	Changes in DNA Sequences	14.12
10.3	Nucleotide Polymorphism	14.13
10.4	References	14.14
10.4	Problems	14.14
15.	Gene Function	15.1
10.18	Relationship Between Gene and Enzyme	15.1
10.30	Genetic Control of Biochemical Reactions	15.1
10.32	One Gene-One Reaction Hypothesis	15.3
10.34	Relationship Between Genotype and Phenotype	15.3
10.35	One Gene-One Enzyme Hypothesis	15.5
10.35	One Gene-One Polypeptide Hypothesis	15.8
10.35	One Gene-One Chromomere Hypothesis	15.9
10.37	One Gene-One Antigen Hypothesis	15.10
11.1	One Cistron-One Polypeptide Hypothesis	15.10
11.1	One Gene-One Ribosome-One Protein Hypothesis	15.10
11.1	One Gene-One mRNA-One Protein Hypothesis	15.10
11.1	One Gene-One Primary Cellular Function Hypothesis	15.11
11.30	Gene Discoveries	15.11
11.34	Two Genes-One Polypeptide Hypothesis	15.12
11.37	Knowing Gene Function by Knocking off Genes	15.13
11.40	One Gene-Many Proteins Hypothesis	15.13
12.1	One Enzyme-Two Functions Concept	15.14
12.1	Recent Thoughts on Gene Function	15.14
12.1	References	15.14
12.3	Problems	15.16
16.	Transcription	16.1
12.31	Central Dogma and its Modification	16.1
12.33	Transcription in Bacteria	16.4
12.34	Transcription in Viruses	16.10
12.34	Reverse Transcription	16.12
12.38	Transcription of Eukaryotic Genes	16.13
12.30	Chloroplast Transcription	16.26
13.1	Mitochondrial Transcription	16.26
13.1	References	16.26
13.1	Problems	16.28

17. RNA Processing and RNA Editing	17.1
Pre-Messenger RNA Processing	17.1
Pre-Transfer (Soluble) RNA Processing	17.6
Pre-Ribosomal RNA Processing	17.12
Self-Splicing of rRNA In <i>Tetrahymena</i>	17.16
Alternative RNA Splicing	17.18
RNA Editing	17.21
References	17.27
Problems	17.29
18. Genetic Code	18.1
Size of Genetic Code	18.1
Glossary of Terms on Genetic Code	18.2
Properties of Genetic Code	18.2
Deciphering the Genetic Code	18.7
Genetic Code at Work	18.9
Genetic Code Specificity	18.9
Expansion of Genetic Alphabet	18.10
Recoding	18.10
The Second Code	18.12
References	18.13
Problems	18.14
19. Protein Biosynthesis	19.1
Translation in Prokaryotes	19.1
Ribosome – Site of Protein Synthesis	19.4
Translation in Eukaryotic Cytoplasm	19.16
Protein Synthesis in Chloroplasts and Mitochondria	19.20
Role of MicroRNAs in Protein Synthesis	19.23
Hybrid Arrested Translation	19.24
Hybrid Released Translation	19.24
Protein Engineering	19.24
References	19.25
Problems	19.27
20. Fate of Nascent Proteins, Ribosomes, and Messenger RNAs	20.1
Protein Modification	20.1
Protein Secretion in Prokaryotes	20.2
Protein Translocation in Prokaryotes	20.5
Co-Translational Targeting (Secretory Pathways) in Eukaryotes	20.7
Post-Translational Targeting in Eukaryotes	20.9
Protein Folding	20.12
Molecular Chaperone	20.13
Protein Degradation	20.14
Fate of Ribosomes After Translation	20.16
Messenger RNA Decay	20.16
References	20.19
Problems	20.20

21. Gene Expression Analysis	21.1
Glossary Related to Gene Expression Analysis	21.1
Global Gene Expression Profiling	21.2
Expression System	21.2
Gene Expression Networks	21.3
mRNA Quantification	21.3
Protein Quantification	21.6
Applications of Gene Expression Analysis	21.8
Limitations of Gene Expression Analysis	21.10
Systems Biology Approach in Gene Expression Analysis	21.10
References	21.13
Problems	21.14
22. Gene Regulation in Bacteria	22.1
Gene Regulation at DNA Level	22.1
Gene Regulation at Transcriptional Level	22.2
Antisense RNA in Prokaryotic Gene Regulation	22.18
Alternative Sigma Factors	22.20
Post-Transcriptional Control	22.20
Control at Translational Level	22.22
Post-Translational Control	22.22
Alarmones	22.24
References	22.25
Problems	22.26
23. Gene Regulation in Viruses	23.1
SpoI Bacteriophage	23.3
Lambda Bacteriophage	23.4
T4 Bacteriophage	23.14
T7 bacteriophage	23.15
Human Immunodeficiency Virus	23.15
References	23.16
Problems	23.16
24. Gene Regulation in Eukaryotes	24.1
Gene Control Levels in Eukaryotic Cells	24.2
Transcriptional Initiation in Mammalian Genes	24.12
Molecular Zippers in Gene Regulation	24.15
Gene Regulation by Non-Histone Proteins	24.16
Artificial Gene Repressors	24.17
Specificity in Eukaryotic Gene Transcription	24.18
Metal-Regulated Transcription in Eukaryotes	24.20
Regulation of Transposable Elements	24.21
Control of Cell Cycle	24.21
Cohesion Complex Regulates Gene Expression	24.23
Gene Regulation by Hormonal Action	24.24
References	24.28
Problems	24.29

25. Epigenetics	25.1
Epigenetic Patterns	25.1
Bacterial Methylase Systems	25.2
Characteristics of DNA Methylation	25.3
Host Restriction and Modification	25.5
Cytosine Methylation in Vertebrates	25.7
DNA Methylation and Gene Expression	25.8
DNA Methylation in Gene Regulation and Differentiation	25.10
Mutations and Epimutations	25.10
DNA Methylation in Genome Stability and Gene Silencing	25.11
Epigenetic Reprogramming	25.11
Chromosome Imprinting	25.13
Dosage Compensation	25.16
Epigenetic Variations	25.17
Paternal X chromosome Inactivation	25.18
DNA Methylation in Invertebrates	25.18
DNA Methylation in Plants	25.18
Paramutation	25.19
Defense Against Spread of Transposable Elements	25.19
Cyclic Changes in DNA Methylation	25.20
RNA Methylation	25.20
Histone Modification	25.21
General Functions of Histone Modification	25.25
Consequences of Histone Modifications	25.26
References	25.27
Problems	25.30
26. Noncoding RNAs and Gene Silencing	26.1
Noncoding RNAs	26.1
Antisense Noncoding RNAs	26.2
Gene Silencing	26.3
Transcriptional Gene Silencing	26.4
Phenomenon Associated with TGS	26.7
Post-Transcriptional Gene Silencing	26.12
Methylation of Non-Coding RNAs	26.21
Translational Gene Silencing	26.21
Exploitation of Gene Silencing	26.22
References	26.23
Problems	26.26
27. Molecular Techniques and Tools	27.1
Separation of DNA/RNA	27.1
<i>In situ</i> Hybridization	27.3
Squash Dot Hybridization	27.5
Southern Blotting	27.5
Northern Blotting	27.6
Western Blotting	27.7
Eastern Blotting	27.8
Dot Blots and Slot blots	27.8

Electrophoresis	27.9
Colony or Plaque Hybridization	27.10
Chromosome Walking	27.11
Chromosome Jumping/Hopping	27.12
Chromosome Landing	27.12
Nick Translation	27.13
RNA Sequencing	27.13
DNA Sequencing	27.17
RNA Synthesis	27.22
DNA Synthesis	27.23
Gene Synthesis Machines	27.29
DNA Fingerprinting	27.31
DNA Markers	27.33
Microarrays	27.39
Restriction Endonucleases	27.41
Recombinant DNA Technology	27.43
Quantitative Trait Loci Mapping	27.45
References	27.47
Problems	27.52
Glossary	G.1
Subject Index	S.1
Gene Regulation in Viruses	1.1
Spol Bacteriophage	1.2
Lambda Bacteriophage	1.3
T4 Bacteriophage	1.4
T7 bacteriophage	1.5
Human Immunodeficiency Virus	1.6
References	1.7
Problems	1.8
Gene Regulation in Eukaryotes	2.1
Gene Control Levels in Eukaryotic Cells	2.2
Transcriptional Initiation in Mammalian Genes	2.3
Molecular Zippers in Gene Regulation	2.4
Gene Regulation by Non-Histone Proteins	2.5
Artificial Gene Repressors	2.6
Specificity in Eukaryotic Gene Transcription	2.7
Metal-Regulated Transcription in Eukaryotes	2.8
Regulation of Transposable Elements	2.9
Control of Cell Cycle	2.10
Cohesion Complex Regulates Gene Expression	2.11
Gene Regulation by Hormonal Action	2.12
References	2.13
Problems	2.14
Epigenetics	27.9
Epigenetic Patterns	27.10
Bacterial Methylase Systems	27.11
Characteristics of DNA Methylation	27.12
Host Restriction and Modification	27.12
Cytosine Methylation in Vertebrates	27.13
DNA Methylation and Gene Expression	27.13
DNA Methylation in Gene Regulation and Differentiation	27.17
Mutations and Epimutations	27.22
DNA Methylation in Genome Stability and Gene Silencing	27.23
Epigenetic Reprogramming	27.29
Chromosome Imprinting	27.31
Dosage Compensation	27.33
Epigenetic Variations	27.39
Paternal X chromosome Inactivation	27.41
DNA Methylation in Invertebrates	27.43
DNA Methylation in Plants	27.45
Transcription	27.47
Defense Against Spread of Transposable Elements	27.52
Cyclic Changes in DNA Methylation	27.52
RNA Methylation	27.52
Histone Modification	27.52
General Functions of Histone Modification	27.52
Consequences of Histone Modifications	27.52
References	27.52
Problems	27.52
Noncoding RNAs and Gene Silencing	28.1
Noncoding RNAs	28.2
Antisense Noncoding RNAs	28.3
Gene Silencing	28.4
Transcriptional Gene Silencing	28.5
Phenomenon Associated with TGS	28.6
Post-Transcriptional Gene Silencing	28.7
Methylation of Non-Coding RNAs	28.8
Transcriptional Gene Silencing	28.9
Exploitation of Gene Silencing	28.10
References	28.11
Problems	28.12
Molecular Techniques and Tools	29.1
Separation of DNA/RNA	29.2
In situ Hybridization	29.3
Southern Dot Hybridization	29.4
Southern Blotting	29.5
Northern Blotting	29.6
Western Blotting	29.7
Eastern Blotting	29.8
Dot Blots and Slot Blots	29.9
