

CONTENTS

- 1. Historical Resume of Taxonomy** **1.1**
The Vedic Period; Aristotle's Contribution; The Pre-Linnaean Period; Linnaeus' Contribution; The Post Linnaean Period; Darwin's Contribution; Population Systematics; Phylogenetic Systematics
- 2. Basic Concepts of Animal Taxonomy** **2.1**
Systematics; Why Classify Organisms; Features of Classification; Hierarchical Classification; Categories; Taxa; Rank; Species; Genus; Family; Order; Class; Phylum; Kingdom; Taxonomic Characters; Attributes for Classifying Organisms; Fossils; The Task of Systematist; Taxonomy-Myths and Conception; Importance of Taxonomic Study
- 3. Types of Classification** **3.1**
Principle of Zoological Classification; Differences; Accident; Property; Features of Classification; Types of Classification; Ecological Classification; Teleological Classification; Artificial Classification; Merits of Artificial Classification; Demerits of Artificial Classification; Natural Classification; Morphology; Homology; Population; Cladistics; Phenetics; Phyletics; Merits of Natural Classification; Biological Classification; Evolutionary Classification; Phylogenetic Classification; Genetic Basis of Classification
- 4. Zoological Nomenclature** **4.1**
Early System of Naming; Binomial Nomenclature; Salient Features of Biological Nomenclature; Linnaean Hierarchy; Trinomial Nomenclature; Types of Nomenclature; Rank Based; Circumscription Based; Description Based; Phylogeny Based; Hierarchy Based; Necessity for Rules of Nomenclature; Nomenclature Code; The General Principles of Nomenclature; Principle of Binomial Nomenclature; Principles of Name Bearing Types; Principle of Priority; Limitations of Rules of Priority; Authorship; Principles of Co-ordination; Availability and validity of Names; Publication of Names; First Reviser Principle; Describing New Species; Derivation of Name; Termination of Name; Spellings; Gender Agreement; Principles of Typification; Kinds of Type Specimens; Primary Type; Holotype; Syntype; Lectotype; Neotype; Secondary Type; Allotype; Paratype; Paralectotype; Topotype; Monotype; Indication; Significance of Type Specimens; Voucher Specimens; Status of Names; Valid Name; Invalid Names; Principles of Homonymy; Senior Homonyms; Junior Homonyms; Primary Homonym; Secondary Homonym; Junior Secondary Homonym; Hemi-homonym; Double Homonymy; Synonyms; Subjective Synonyms; Subjective Invalid Synonyms; Junior Subjective Synonyms; Nominotypical subspecies and subspecies Autonyms; Emendation; Justified; Unjustified; Unavailable; Misspelling; Incorrectly formed name;

Unnecessary replacement; Suppressed by ruling; Doubtful cases; Other Types of Names; Misapplied Names; Unnamed; Temporary Name; Nomen nudum; Nomen dubium; Nomen novum; Nomen protectum; Nomen oblitum; Nomen hybridum; Nomen trivial; Vernacular Name; Parenthesis; Brackets; Asterisk; Abbreviation; Punctuation Marks; Use of latin proposition 'in' and 'ex'; Numerical in Compound Names; Sensu strict; Sensu lato; Partim or pro parte; Use of certain suffix; Use of suffix 'ensis' or 'iensis'; Historical Background of Zoological Nomenclature; Preamble to the International Code of Zoological Nomenclature; Features of Zoological Nomenclature; Uniqueness; Universality; Stability; Explanatory Note to the Code; Range and Authority of Code; Freedom of Taxonomic Thought; Catalogues of Zoological Names; International Commission of Zoological Nomenclature; Universal Rules and Powers of Commission; ICZN Amendment on Electronic Publication; International Trust for Zoological Nomenclature; Nomenclature *vis-a-vis* Taxonomy; Taxonomic Inflation; Modern Developments

5. Microtaxonomy and Macrotaxonomy 5.1

Microtaxonomy; Phenon; Taxon; Category; Species and Classification; Macrotaxonomy

6. Phylogenetic Systematics 6.1

Recapitulation Theory; Cladistics Analysis; Apomorphy; Plesiomorphy; Sympleiomorphy; Synapomorphy; Hypothesis of Cladistic Analysis; First hypothesis; Second hypothesis; Third hypothesis; Basics of Cladistic Analysis; Organisms are descended from common ancestor; Bifurcating Pattern of Cladogenesis; Changes in Characteristics; Methodology of Cladistic Analysis; Construction of Cladogram; Selection of Taxa; Determination of Characters; Polarity of Characters is determined; Grouping of Taxa by synapomorphies; Parsimony; Outgroup Comparison; Interpretation of Cladogram; Characteristic Features of Cladistics; Monophyletic Grouping; Paraphyletic Grouping; Polyphyletic Grouping; Holophyletic Grouping; Evolutionary tree, Phylogenetic Tree and Cladogram; Pattern Cladism; Biosynthetic Phylogeny; Significance of Phylogenetic Systematics

7. Phylogenetic Trees 7.1

Understanding Phylogenetic Trees; Node; Branch; Topology; Branch Length; Root; Distance Scale; Clade; Operational Taxonomic Units; Hypothetical Taxonomic Units; Out Group; Features of Phylogenetic Tree; Kinds of Phylogenetic Tree; Cladogram; Phenogram; Phylogram; Dendrogram; Curvogram; Eurogram; Swoopogram; Chronogram; Understanding Phylogeny; Construction of Phylogenetic Trees; Distance Based Methods; Maximum Parsimony; Maximum Likelyhood; Bayesian Phylogenetic Interference; Distance Methods; Limitations in Construction of Phylogenetic Tree; Statistical Tests; Phylogenetic Analysis Tool; Common Genes and New Family Tree; Gene Tree versus Species Tree; Significance of Phylogenetic Trees

8. Molecular Phylogeny 8.1

Essentials of Molecular Phylogenetic Analysis; Database for Phylogenetic Analysis; Tree Building; Orthologs; Paralogs; Xenologs; HomoloGene; Entrej Genome; Measurement of Immunological Distance; Protein Sequences; Hemoglobin; Cytochrome; Genetic Complement; Nucleic Acid

Phylogeny; DNA Hybridization Technique; Comparison of DNA Sequence; Chromosome Painting; Molecular Clock; Importance of Molecular Phylogeny

9. Evolutionary Taxonomy

9.1

Features of Evolutionary Taxonomy; Distinctness; Degree of Differences; Ecology and Evolution; Grade Characteristics; Equivalence; Stability; Size of Taxon; Splitters and Lumpers; Sister Groups; Mosaic Evolution; Concept of Evolutionary Taxonomy; Evolutionary Taxonomy versus Cladistics; Evolutionary Taxonomy versus Phylogenetics; Limitations of Evolutionary Taxonomy; Significance of Evolutionary Taxonomy and its Decline

10. Numerical Taxonomy 10.1

Features of Numerical Taxonomy; Basis of Numerical Taxonomy; Phenetics; The Adansonian Principle; Procedures in Numerical Taxonomy; Distance Methods; Character Data Method; Operational Taxonomic Units; Binary Characters; Qualitative Multistate Characters; Quantitative Multistate Characters; Measurement of Quantitative Characters; Structure of Taxonomic System; Essentials of Taxonomic System; Monothetic Method; Natural Methods; Nested Hierarchy; Establishment of Resemblance and Description of Taxa; Frequency Distribution of Similarity Coefficient; Euclidean Distance; Differential Shading of Similarity Matrix; Data Analysis; Distance Analysis; Cluster Analysis; Factor Analysis; Representation of Clustering; Limitations of Numerical Taxonomy; Significance of Numerical Taxonomy

11. Population Taxonomy 11.1

Characteristics of Population; Population Density; Population Dynamics; Biotic Potential; Carrying Capacity; Interaction and Variability in Populations; Positive Interaction; Mutualism; Commensalism; Proto-cooperation; Negative Interaction; Exploitation; Shelter; Food; Parasitism; Predation; Defence Mechanism; Source of Variation in Populations; Developmental Variations; Non-genetic Variations; Age Variation; Seasonal Variation; Cyclomorphosis; Social Variation; Genetic Variation; Discontinuous Variation; Continuous Variation; Environmental Variability due to Phenotypic Plasticity; Genetic Variability in Populations; Differentiation of Populations; Genetic Drift and Gene Pool; Population Genetics; Mutation, Natural Selection and Adaptation in Population

12. Taxonomic Characters

12.1

Characters and Systematics; Diagnostic Significance; Evolutionary Significance; Phylogenetic Significance; Kinds of Taxonomic Characters; Diagnostic Characters; Key Characters; Measurement of Characters; Coding of Characters; List of Characters; Distribution of Character States; Missing Characters; Inapplicable Characters; Qualitative Characters; Binary Characters; Multiseriate Characters; Quantitative Characters; Meristic Characters; Continuous Quantitative; Ordered Characters; Unordered Characters; Homology; Test for Homology; Similarity; Conjunction; Congruence with other Homologies; Serial Homology; Homoplasy; Convergence; Parallelism; Weighting of Characters; Character Analysis; Morphological Characters; Body Parts and Coloration; Developmental Characters; Genetic Characters; Cytological Characters; Physiological Characters; Molecular Characters; Behavioural Characters; Effect of Ecological Factors; Parasites and Symbionts; Geographical Characters;

Unrelated Characters; Character Displacement; Classification and Source of Data; Significance of Characters in Biodiversity Assessment

13. The Species Concept

13.1

The Species Taxon; The Species Category; Different Types of Species Concept; Typological Species; Nominalistic Species; Biological Species; Disadvantage of Biological Species; Asexual Apomictic Species; Sibling and Cryptic Species; Gradual Speciation; Rings of Races; Hybrid Complex; Evolutionary Species; Phylogenetic Species; Recognition Species; Other Kinds of Species; Taxonomic Species; Morphospecies; Palaeospecies; Agamospecies; Phenetic Species; Chronospecies; Cohesion Species; Ring Species; Umbrella Species; Keystone Species; Indicator Species; Biospecies; Flagship Species; Subspecies; Demerits of Subspecies Concept; Temporal Subspecies; Other Interspecies Group; Deme; Race; Cline; Variety; Morphotype; Super Species; How Do New Species Occur?; Process of Speciation; Anagenesis; Cladogenesis; Premating Isolating Mechanism; Post Mating Isolating Mechanism; Hybrid Inviability; Hybrid Sterility; Behavioural Sterility; Role of Reproductive Isolation in Speciation; Pattern of Speciation; Allopatric Speciation; Parapatric Speciation; Alloparapatric Speciation; Sympatric Speciation; Mechanism of Isolation; Natural Selection, Environment and Speciation; Establishment of New Species; Speciation versus Biodiversity

14. Zoological Types

14.1

Type Species; Type Genus; Features of Type Specimen; Principles of Typification; Correcting Misidentification of Types; Designation of Type Specimen; Kinds of Type Specimen; Primary Type; Holotype; Neotype; Secondary Type; Syntype; Isotype; Lectotype; Paralectotype; Hapantotype; Tertiary Type; Paratype; Specimens of Special Origin; Significance of Type Specimens

15. Taxonomic Categories

15.1

Hierarchy; Types of Category; The Lower Category; The Intraspecific Category; Polytypic Species; Variety; Subspecies; Super Species; Race; The Higher Category; Genus; Features of Genus; Family; Features of Family; Subfamily; Superfamily; Order; Class; Phylum; Sub Phylum/Super phylum; Kingdom; Origin of Categories; Demerits of Higher Categories Groupings

16. Meristic and Non-Meristic Data Analysis

16.1

Morphological Variability in Natural Population; Meristic Characters; Fish Meristic Characters; Standard Length; Total Length; Length of the Head; Snout Length; Upper Jaw Length; Lower Jaw Length; Eye Diameter; Girth Length; Height or depth of the Body; Length of the Caudal Peduncle; Fin Formula; Scale Counts; Insect Meristic Characters; Non-Meristic Characters; Other Characters; Chemical Marks in Otolith; Thermal Marks; Elastomers; Biological Marks; Significance of Character Study

17. Biodiversity Assessment

17.1

Genetic Diversity; Diversity between Species; Diversity of Ecosystem; Distribution of Biodiversity; Assessment of Biodiversity; Types of Biodiversity; Alpha Diversity; Beta Diversity; Gamma Diversity; Biodiversity Indices; Species Richness; Factors Affecting Species Richness;

Simpson Diversity Index; Shanon -Weiner Index; Sorenson's Similarity Index; Association Index; Dominance Index; Dissimilarity Index; Quadratic Entropy Index; Measures of Biodiversity; Phylogenetic Measurement of Biodiversity; Taxonomic Surrogacy; Biodiversity Hotspots; Genetic Pollution; Biodiversity and Ecosystem; Biodiversity and Climate Change; Biodiversity & Genetic Resources; Loss of Biodiversity *vis-à-vis* Food Security; Biodiversity, Agriculture and Sustainable Development; Biodiversity and Human Health; Biodiversity, Trade and Commerce; Biodiversity -The Refreshing Asset; Biodiversity Informatics; Biodiversity *vis-à-vis* Evolution; Threats to Biodiversity; Laws for Conservation of Nature and Natural Resources

18. Taxonomic Keys

18.1

Construction of Taxonomic Key; Features of Taxonomic Keys; Types of Taxonomic Key; Dichotomous Key; Diagnostic Keys; Synoptic Key; Diagnostic versus Synoptic Key; Variation in Single Access Key; Presentation of Taxonomic Keys; Nested Style; Linked Style; Bracket Key; Indented Key; Simple Non-bracket Key; Simple Bracket Key; Serial Key; Pictorial Key; Branching Key; Box Type Key; Circular Key; Computer Aided Keys; Description of Genera; Merits and Demerits of Taxonomic keys

19. Taxonomic Publications

19.1

Taxonomic Literature; Atlas; Catalog; Checklist; Fauna; Field Guide; Field Book; Hand Book; Manual; Monographs; Synopsis and Reviews; Revision; Treatise; Features of Taxonomic Publications; Diagnosis; Original Description; Report; Style of Description; Sequence of Characters; Contents of Description; Illustrations; Reference and Bibliography; Keys; Form and Style of Taxonomic Publications; Index to Organism Names; Journals on Systematics; Registration of New Name in Zoology; Electronic Publications of New Animal Names; Significance of Taxonomic Publications

20. Collections and Preservation of Natural History Specimens

20.1

Collection Procedures; Time of Collection; Place of Collection; Terrestrial Collection; Aquatic Collection; Fresh Water Collection; Marine Collection; Recording of Data; Collecting Equipments; Aquatic Collection; Dip Net; Seine; Dredge Net; Terrestrial Collection; Aerial Net; Sweep Net; Beat Sheet; Aspirator; Traps; Pitfall Traps; Light Traps; Bait Traps; Berlese Funnel; Paper Bags; Narcotizing Agents; Killing Bottle; Use of Killing Bottle; Preservation of Collected Specimens; Preservation in Liquid 20.9 Emptying of Killing Bottle; Preservation of Insects; Relaxing the Collected Specimens; Mounting of Insects; Spreading Board; Pinning of Insects; Pinning Dowel; Labeling; Stuffing of Insects; Display of Small Insects; Carding; Mounting Minute Insects on Slides; Storage of Insects; Protection of Insect Collections; Identification of Insects; Dispatching Insects for Identification; Collection and Preservation of Fish; Useful Tips for Collection and Curation; Significance of Natural History Specimens; Environmental Studies; Conservation of Nature; Applications of Biochemical Knowledge; Archaeology and Ethnology; Evolution and Behaviour; Historical Studies; Service to the Society; Trade and Commerce; Recreation; Agriculture; Natural History Collections as National Resource

- 21. Information Retrieval** **21.1**
 Working of Information Retrieval System; Biological Names and Taxonomies; TaxMeOn-Meta-Ontology; Name Collections; Species List; Biological Research Result; Information Retrieval Models and Gadgets; Informational Retrieval Objects; Informational Retrieval Models; Vertical Taxonomy; The Representation; The Reasoning; Keyword-base; Horizontal Taxonomy; Tasks; Ad Hoc Retrieval; Known Item Search; Interactive Retrieval; Filtering; Browsing; Mining; Gathering; Crawling; Managing Animal Diversity; Object Oriented Taxonomic Biodiversity Databases; Computer Programs and Internet Resources; Universal Register; Zoological Record; Animal Diversity Web; The Electronic Zoo; Description Language for Taxonomy; Global Index Names; Global Names Architecture; Index to Organism Names; The Global Biodiversity Information System; TaxonTree; Expert Center for Taxonomic Identification; SysTax Database System; Bayesian Analysis to Molecular Biology and Evolution; Mantis; Tree BASE; Pandora; BioNet International; Diana; Platypus; Taxis; U Bio Portal; OCEAN; *Systema Naturae* 2000; Taxonomicon; The Index of Life; The Tree of Life; The Web of Life; The Facts of Life; Tree of Life Web Project; Species 2000; IT IS; ZooBank; The Catalogue of Life

- 22. Recent Trends in Taxonomy** **22.1**
 Morphological Characters; Embryological Study; Ecological Approach; Behavioural Pattern; Cytotaxonomy; Molecular Phylogeny; Chemotaxonomy; Histochemical Methods; Comparative Serology; Numerical Taxonomy; Molecular Taxonomy; Barcoding Life; Basics of Barcoding; Applications of DNA Barcode; Identification of Birds; Delimiting Cryptic Species; Molecular Operational Taxonomic Units; Integrated Operational Taxonomic Units; Cataloguing Ancient Life; Constraints of DNA Taxonomy; Convention on Biodiversity; The Global Taxonomic Initiative; Parataxonomy; Integrative Taxonomy

- 23. Significance of Taxonomy and Biosystematics** **23.1**
 Systematics and Theoretical Biology; Systematics and Applied Biology; Green Revolution; Biological Control; Economic Entomology; Quarantine; Management of Wild Life; Trade and Commerce; Ecological Problems; Taxonomy and Systematics; Natural History Collections; Taxonomy *vis-a-vis* Biodiversity Conservation; Taxonomic Minimalism; Taxonomy: The Present Scenario
