Chapter 1 Biochemical Diversity of 2-Oxoglutarate-Dependent Oxygenases	1
<i>Robert P. Hausinger</i>	
1.1 Introduction	1
1.2 2OG-Dependent Dioxxygenases that Act on Proteins	4
1.2.1 Protein Substrates with Structural Roles	4
1.2.2 Protein Substrates with Oxygen-Sensing Roles	4
1.2.3 Ribosomal Protein Hydroxylases	6
1.2.4 Other Protein Substrates	6
1.2.5 Histone Demethylases	8
1.2.6 Other Protein Demethylases	8
1.3 2OG-Dependent Dioxxygenases that Act on DNA or RNA	9
1.3.1 Demethylation of Alkylated DNA or RNA Substrates	9
1.3.2 Other Oxidative Modifications of DNA or RNA	11
1.4 Lipid-Related Metabolism Involving 2OG-Dependent Oxygenases	13
1.5 Plant Metabolite Biosynthesis Using 2OG-Dependent Oxygenases	15
1.5.1 2OG-Dependent Oxygenases in Flavonoid Biosynthesis	15
1.5.2 2OG-Dependent Oxygenases of Gibberellin Biosynthesis	17

RSC Metallobiology Series No. 3

2-Oxoglutarate-Dependent Oxygenases

Edited by Robert P. Hausinger and Christopher J. Schofield

© The Royal Society of Chemistry 2015

Published by the Royal Society of Chemistry, www.rsc.org

1.5.3 2OG-Dependent Oxygenases in Alkaloid Synthesis	17
1.5.4 Other Plant-Specific 2OG-Dependent Oxygenases	19
1.6 2OG-Dependent Oxygenases Catalysing Reactions with Free Amino Acids, Nucleobases, Herbicides and Sulfur- or Phosphorous-Containing Compounds	21
1.6.1 Amino Acid Hydroxylases	21
1.6.2 Hydroxylases of Nucleobases and Nucleosides	25
1.6.3 Herbicide Degradation by 2OG-Dependent Oxygenases	27
1.6.4 Sulfonate and Sulfate Metabolism by 2OG-Dependent Dioxygenases	27
1.6.5 2OG-Dependent Oxygenases in Phosphonate Metabolism	29
1.7 2OG-Dependent Oxygenases Involved in Antibiotic Biosynthesis	29
1.7.1 Bicyclic β -Lactam Antibiotic Biosynthesis	30
1.7.2 Synthesis of Terpenoid Antibiotics	32
1.7.3 2OG-Dependent Oxygenases Acting on Tethered Substrates in Non-Ribosomal Peptide Synthesis	32
1.7.4 Other Roles for 2OG-Dependent Oxygenases in Antibiotic Synthesis	36
1.8 Related Enzymes	38
1.8.1 Isopenicillin N Synthase	38
1.8.2 1-Aminocyclopropane-1-Carboxylate Oxidase	38
1.8.3 4-Hydroxyphenylpyruvate Dioxygenase and Hydroxymandelate Synthase	39
Note added in proof	40
Acknowledgements	40
References	40
Chapter 2 Introduction to Structural Studies on 2-Oxoglutarate-Dependent Oxygenases and Related Enzymes	59
<i>Wei Shen Aik, Rasheduzzaman Chowdhury, Ian J. Clifton, Richard J. Hopkinson, Thomas Leissing, Michael A. McDonough, Radosław Nowak, Christopher J. Schofield, and Louise J. Walport</i>	
2.1 Introduction to Structural Studies on 2-Oxoglutarate-Dependent Oxygenases	59
2.1.1 Background	59
2.1.2 2OG Oxygenases Have a Double-Stranded β -Helix Core Fold	63

2.2	Iron Binding Sites in 2OG Oxygenases and Related Enzymes	69
2.3	2OG Binding by 2OG Oxygenases	73
2.4	Substrate Binding by 2OG Oxygenases	76
2.5	Structural Aspects of Inhibition of 2OG Oxygenases	81
	Acknowledgements	85
	References	85
Chapter 3	Mechanisms of 2-Oxoglutarate-Dependent Oxygenases: The Hydroxylation Paradigm and Beyond	95
	<i>J. Martin Bollinger Jr., Wei-chen Chang, Megan L. Matthews, Ryan J. Martinie, Amie K. Boal, and Carsten Krebs</i>	
3.1	Introduction	95
3.2	Mechanism of the Fe/2OG Hydroxylases	96
3.2.1	Evidence for Two Intermediates by Stopped-Flow Absorption Spectroscopy	98
3.2.2	Evidence that the First Intermediate is a High-Spin Fe(IV) Complex	98
3.2.3	Evidence that the Fe(IV) Complex Cleaves the C-H Bond of the Substrate	99
3.2.4	Evidence that the Fe(IV) Complex is a Ferryl [Fe(IV)-Oxo] Species	99
3.2.5	Evidence that the Second Intermediate is an Fe(II) Product Complex	100
3.2.6	Evidence for Generality of the Two Intermediates and Their Relative Kinetics	100
3.3	Fe/2OG Aliphatic Halogenases	101
3.3.1	Evidence for H•-Abstracting Haloferryl Complexes in the Halogenases	102
3.3.2	Analysis of Substrate Triggering in the Halogenases	103
3.3.3	Clues as to How SyrB2 Directs Halogenation in Preference to Hydroxylation	104
3.3.4	Evidence that Substrate Positioning Ensures Halogenation Rather than Hydroxylation	104
3.4	The Epimerization Catalysed by Carbapenem Synthase	106
3.4.1	The Carbapenem Biosynthesis Gene Cluster	107
3.4.2	The Mechanism of Fe/2OG-Mediated Stereoinversion	107
3.4.3	Identity of the Hydrogen Atom Donor	109

3.5 Oxacyclizations Mediated by the Fe/2OG Oxygenases and Related Enzymes	110
3.6 C-C Desaturation Reactions Mediated by the Fe/2OG Oxygenases	114
Acknowledgements	117
References	117
Chapter 4 Synthetic Models of 2-Oxoglutarate-Dependent Oxygenases	123
<i>Caleb J. Allpress, Scott T. Kleespies, and Lawrence Que Jr</i>	
4.1 Introduction	123
4.2 Functional Models	125
4.2.1 Model Complexes with a Tris(2-pyridylmethyl)amine-Based Ligand	125
4.2.2 Model Complexes with a Tris(pyrazolyl)borate-Based Ligand	127
4.3 Models of Reaction Intermediates	131
4.3.1 Structural and Spectroscopic Properties of the Fe(IV)=O Unit	131
4.3.2 Reactivity of Fe(IV)=O Complexes	138
4.3.3 Models for Other Intermediates in the 2OG-Dependent Enzyme Catalytic Cycle	142
4.4 Perspectives and Outlook	143
Acknowledgments	144
References	144
Chapter 5 Collagen Hydroxylases	149
<i>Johanna Myllyharju</i>	
5.1 Collagen Hydroxylases and Their Roles in Collagen Synthesis	149
5.2 Molecular Composition and Expression of Vertebrate Collagen Hydroxylases	151
5.2.1 Vertebrate Collagen Prolyl 4-Hydroxylases are $\alpha_2\beta_2$ Heterotetramers	151
5.2.2 Vertebrate Lysyl Hydroxylases are Homodimers	152
5.2.3 Vertebrate Prolyl 3-Hydroxylases are Multiprotein Complexes	153
5.3 Structural and Enzymatic Properties of Collagen Hydroxylases	153
5.3.1 Structural Properties	154
5.3.2 Catalytic and Inhibitory Properties	155
5.4 Human Diseases and Gene-Modified Mouse Models	157
5.4.1 Collagen Prolyl 4-Hydroxylases	158

5.4.2	Lysyl Hydroxylases	158
5.4.3	Prolyl 3-Hydroxylases	159
	References	161
Chapter 6	The Role of 2-Oxoglutarate-Dependent Oxygenases in Hypoxia Sensing	169
	<i>Sarah E. Wilkins, Emily Flashman, John S. Scotti, Richard J. Hopkinson, Rasheduzzaman Chowdhury, and Christopher J. Schofield</i>	
6.1	Introduction to the Hypoxic Response in Animals	169
6.1.1	Background to Biochemistry of the Hypoxia Inducible Factor System	169
6.1.2	The HIF Hydroxylases	171
6.2	The HIF Prolyl Hydroxylases	176
6.2.1	Biochemistry of the HIF Prolyl Hydroxylases	176
6.2.2	Structural Studies on the HIF Prolyl Hydroxylases	179
6.3	The HIF Asparaginyl Hydroxylase – FIH	180
6.3.1	FIH is a Second Type of HIF Hydroxylase	180
6.3.2	Alternative Substrates for FIH	181
6.3.3	Biochemistry of FIH	182
6.3.4	Structural Studies on FIH	183
6.4	Inhibition of the HIF Hydroxylases	185
6.5	PHD and FIH Homologues and Possible Roles in Hypoxia Sensing	188
6.5.1	Background	188
6.5.2	PHD Evolution and Ribosomal Protein Prolyl Hydroxylases	189
6.5.3	Roles for FIH Homologues in Histone Demethylation, RNA Splicing and Ribosomal Hydroxylation	191
6.6	Conclusions	194
	Acknowledgements	194
	References	195
Chapter 7	JmjC Lysine Demethylases	210
	<i>Xiaodong Cheng and Raymond C. Trievel</i>	
7.1	Introduction	210
7.2	The FBXL11/FBXL10 Family (also known as the KDM2 Family)	211
7.3	The JMJD1 Family (also known as the KDM3 Family)	214
7.4	The JMJD2 Family (also known as the KDM4 Family)	216

7.5	The PHF8/KIAA1718/PHF2 Family (also known as the KDM7 Family)	223
7.6	The JARID1 Family (also known as the KDM5 Family)	227
7.7	The UTX/JMJD3 Family (also known as the KDM6 Family)	229
7.8	Conclusion	232
	Acknowledgements	233

Chapter 8	AlkB and Its Homologues – DNA Repair and Beyond	246
	<i>Tina A. Müller and Robert P. Hausinger</i>	
8.1	Introduction	246
8.2	Repair of Alkylated DNA (and RNA) in <i>E. coli</i> : AlkB	247
8.3	Repair of Alkylated DNA in Mammals: Alkbh2 and Alkbh3	253
8.4	AlkB Homologues Involved in Cellular Processes Other than DNA Repair	255
8.5	AlkB Homologues with Unknown Functions: Alkbh1 and Alkbh6	256
8.6	Conclusions	257
	Acknowledgements	258
	References	258
Chapter 9	RNA Demethylation by FTO and ALKBH5	263
	<i>Guanqun Zheng and Chuan He</i>	
9.1	Introduction	263
9.2	FTO	264
9.3	ALKBH5	268
9.4	Conclusions and Perspectives	269
	Acknowledgements	270

Chapter 10	Role of ALKBH8 in the Synthesis of Wobble Uridine Modifications in tRNA	275
	<i>Pål Ø. Falnes and Angela Yeuan Yen Ho</i>	
10.1	<i>Escherichia coli</i> AlkB and Its Homologues – A Brief History	275
10.1.1	Discovery of the AlkB Function	275
10.1.2	Mammalian AlkB Homologues	276

10.2	Formation of Modified Wobble Uridines in Eukaryotic tRNAs	276
10.2.1	Wobble Uridine Modifications	276
10.2.2	Enzymes Responsible for Wobble Uridine Modification	277
10.3	Unravelling the Function of Mammalian ALKBH8	277
10.3.1	The ALKBH8 MTase	279
10.3.2	The ALKBH8 Hydroxylase	281
10.4	The Structure of Human ALKBH8	281
10.5	Organismal Distribution of ALKBH8	282
10.6	Biological and Regulatory Significance of ALKBH8	283
10.6.1	Potential Regulation of Translation by Wobble Uridine Modifications	283
10.6.2	Selenoproteins	284
10.6.3	Cancer	285
10.7	Conclusion and Future Perspectives	285
	Acknowledgements	285
	References	286
Chapter 11	The TET/JBP Family of Nucleic Acid Base-Modifying 2-Oxoglutarate and Iron-Dependent Dioxygenases	289
	<i>L. Aravind, Dapeng Zhang, and Lakshminarayan M. Iyer</i>	
11.1	Introduction	289
11.1.1	Modification of Bases in Nucleic Acids	289
11.1.2	Discovery of the TET/JBP Family of Dioxygenases	292
11.2	Oxidative Modifications of Nucleic Acid Bases Catalysed by the TET/JBP Family of Dioxygenases	292
11.3	Structure, Domain Architectures and Genomic Context of the TET/JBP Family of Dioxygenases	294
11.3.1	Structure of the Catalytic Domain	294
11.3.2	Domain Architectures and Genomic Context of the TET/JBP Proteins	296
11.4	Evolutionary History and Adaptations of the TET/JBP Family of Dioxygenases	299
11.5	Functional Implications of the TET/JBP Family	300
11.5.1	Biological Roles of the Vertebrate TET Proteins	300
11.5.2	Vertebrate TET Proteins, Demethylation and Epigenetics	301

11.6	Concluding Remarks	303
	Acknowledgements	304
	References	304
Chapter 12	2-Oxoglutarate-Dependent Hydroxylases Involved in DNA Base J (β-D-Glucopyranosyloxymethyluracil) Synthesis	309
	<i>David Reynolds, Laura Cliffe, and Robert Sabatini</i>	
12.1	Introduction to Base J Localization and Function	309
12.1.1	Base J Localization	310
12.1.2	Base J Function	311
12.2	The Two-Step Biosynthesis Pathway	313
12.2.1	Characterization of the Two Dioxygenases in J Biosynthesis	314
12.2.2	Identification of the Glucosyl Transferase	315
12.3	Regulation of J Synthesis by Two Thymidine Hydroxylases	316
12.3.1	JBP Structure	316
12.3.2	Replication-Independent Oxidation	318
12.4	Regulation of Thymine Oxidation by Metabolism and Host-Parasite Interactions	319
12.4.1	JBP as Oxygen Sensors	320
12.4.2	JBP Regulation by Parasite Metabolism	320
12.5	Conclusions and Future Goals	321
	References	321
Chapter 13	Dioxygenases of Carnitine Biosynthesis: 6-N-Trimethyllysine and γ-Butyrobetaine Hydroxylases	324
	<i>Frédéric M. Vaz and Naomi van Vlies</i>	
13.1	Introduction to Carnitine Biosynthesis and Metabolism	324
13.1.1	Carnitine Occurrence and Function	324
13.1.2	Carnitine Sources and Biosynthesis	325
13.2	Roles of Trimethyllysine and γ -Butyrobetaine Hydroxylases in Carnitine Biosynthesis	327
13.2.1	Trimethyllysine Hydroxylase (E.C. 1.14.11.8)	327
13.2.2	γ -Butyrobetaine Hydroxylase (E.C. 1.14.11.1)	330
13.3	Concluding Remarks	333
	References	333

Chapter 14	Phytanoyl-CoA Hydroxylase: A 2-Oxoglutarate-Dependent Dioxygenase Crucial for Fatty Acid Alpha-Oxidation in Humans	338
	<i>Ronald J. A. Wanders, Sacha Ferdinandusse, Merel S. Ebberink, and Hans R. Waterham</i>	
14.1	Introduction	338
14.2	Metabolism of Phytanic Acid and the Role of Phytanoyl-CoA 2-Hydroxylase	339
14.2.1	Phytanoyl-CoA Synthetase	342
14.2.2	Phytanoyl-CoA 2-Hydroxylase	342
14.2.3	2-Hydroxyphytanoyl-CoA Lyase	343
14.2.4	Pristanal Dehydrogenase	343
14.2.5	Pristanic Acid Activation	344
14.3	Disorders of Phytanic Acid Metabolism	344
14.3.1	Primary Disorders of Peroxisomal Alpha-Oxidation	344
14.3.2	Secondary Disorders of Peroxisomal Alpha-Oxidation	345
14.4	Molecular Basis of Phytanoyl-CoA 2-Hydroxylase Deficiency	345
	Acknowledgements	347
	References	347
Chapter 15	Role of 2-Oxoglutarate-Dependent Oxygenases in Flavonoid Metabolism	350
	<i>Stefan Martens and Ulrich Matern</i>	
15.1	Introduction	350
15.1.1	Physiological Significance and Use of Flavonoids	350
15.2	Modes of Action of Oxygenases and Conserved Motifs	351
15.3	2OG-Dependent Oxygenases Involved in Flavonoid Biosynthesis	353
15.3.1	Hydroxylation – Hydroxylases	353
15.3.2	Desaturation – Desaturases	355
15.3.3	Demethylation – Demethylases	360
15.4	Genetic Identification of Residues Relevant for ANS Activity	361
15.5	Evolution	361
15.6	Concluding Remarks	363
	Acknowledgements	363

Chapter 16	Gibberellin Metabolism	367
	<i>Peter Hedden and Andrew L. Phillips</i>	
16.1	Introduction	367
16.2	Gibberellin 7-Oxidases	370
16.3	Gibberellin 20-Oxidases	372
16.4	Gibberellin 3-Oxidases	374
16.5	Gibberellin 2-Oxidases	375
16.6	Gibberellin Biosynthesis in Other Organisms	376
16.7	Regulation of Gene Expression	377
16.8	Gibberellin ODDs as Targets in Crop Improvement	378
	Acknowledgements	379
	References	379
Chapter 17	2-Oxoglutarate-Dependent Oxygenases of Cephalosporin Synthesis	385
	<i>Inger Andersson and Karin Vålegård</i>	
17.1	Introduction	385
17.2	Overview of Cephalosporin/Cephameycin C Biosynthesis	387
17.2.1	Biosynthesis of the Bicyclic β -Lactam Core	387
17.2.2	Discovery of Cephalosporin Antibiotics	387
17.2.3	Cephalosporin Biosynthesis	387
17.2.4	Biosynthesis of Cephameycin C	388
17.3	DAOCS Structure, Function and Mechanism	389
17.3.1	Overall Fold and Arrangement of the Active Site	389
17.3.2	Monomer-to-Trimer Transition and the Role of the C-Terminus	389
17.3.3	Extension of the N-Terminus: Breaking of the Trimer Interaction Observed in Crystals of DAOCS Apoprotein	390
17.3.4	Influence of Substitutions in the C-Terminal Region on Catalysis	391
17.3.5	Ligand Binding to DAOCS	391
17.3.6	Mechanistic Implications of the Structures for Ring Expansion	394
	References	397
Chapter 18	Recent Advances in the Structural and Mechanistic Biology of Non-Haem Fe(II), 2-Oxoglutarate and O₂-Dependent Halogenases	401
	<i>Janet L. Smith and Dheeraj Khare</i>	
18.1	Introduction	401
18.2	Catalysis by Fe(II)/2OG/O ₂ -Dependent Halogenases	402

18.3 Biological Range of Fe(II)/2OG/O ₂ -Dependent Halogenases	404
18.4 Three-Dimensional Structures of Fe(II), 2OG and O ₂ -Dependent Halogenases	406
18.5 Halogenation <i>versus</i> Hydroxylation	409
18.6 Conclusions	410
References	411
Chapter 19 Isopenicillin N Synthase	414
<i>Peter J. Rutledge</i>	
19.1 Isopenicillin N Synthase and Penicillin Biosynthesis	414
19.2 Windows on Catalysis	415
19.3 The Reaction Mechanism	415
19.3.1 Substrate Binding	415
19.3.2 β -Lactam Closure	417
19.3.3 Thiazolidine Closure	418
19.4 Other Modes of Reactivity	419
19.4.1 Modified Alkyl Side Chains Illuminate Second Ring Closure	419
19.4.2 Unsaturated Side Chains Evoke Oxygenase Activity	420
19.4.3 Depsipeptide Substrates Redirect the Fe-Peroxide	421
19.5 Future Outlook	422
References	422
Chapter 20 1-Aminocyclopropane-1-Carboxylic Acid Oxidase	425
<i>A. Jalila Simaan and Marius Réglier</i>	
20.1 ACC Oxidase and Ethylene Biosynthesis in Plants	425
20.2 Structural Aspects	426
20.3 Substrate/Cofactor Interactions in the Active Site	428
20.4 Mechanistic Aspects	428
20.4.1 Conversion of ACC into Ethylene: A Stepwise Two-Electron Oxidation	428
20.4.2 Other Substrates	429
20.4.3 Possible Mechanism	430
20.4.4 Inactivation Processes	431
20.4.5 Bioinspired Model Complexes	432
20.4.6 On the Role of Bicarbonate	432
20.5 ACC Oxidase and the 2OG-Dependent Oxygenases	433
20.6 Conclusion and Perspectives	434
