Preface	xv
 1. Stress-induced gene expression in freeze-tolerant and anoxia-tolerant vertebrates	 1
<i>K.B. Storey</i>	
Introduction	1
Techniques for evaluating stress-induced protein synthesis	3
Freeze tolerance	5
Freeze-induced gene expression	6
Signals stimulating freeze-induced gene expression	11
Anoxia-induced gene expression in turtles	13
References	19
 2. HIF-1 and the molecular response to hypoxia in mammals	 25
<i>R.H. Wenger and M. Gassmann</i>	
Introduction	25
Hypoxia-inducible gene expression and the discovery of HIF-1	25
The HIF-1 subunits are bHLH-PAS family members	28
Molecular biology of HIF-1 α	29
Functional domains of HIF-1 α	31
Multiple signal transduction mechanisms are involved in hypoxic activation of HIF-1 α	32
(Oxy)genes regulated by HIF-1	35
Complex protein interactions at the HIF-1 DNA binding site	37
Gene targeting experiments reveal HIF-1 as a master regulator of oxygen homeostasis	38
Conclusions	40
References	40
 3. The role of reactive oxygen species in oxygen-dependent gene expression	 47
<i>J. Fandrey and J. Genius</i>	
Introduction	47
EPO as a paradigm for oxygen-dependent genes	48
Hypoxia-inducible factor 1 (HIF-1)	49
What does a cellular oxygen sensor have to recognize?	51
Haem proteins as part of the putative O ₂ sensor	51
Pharmacological characterization of the <i>b</i> -cytochrome oxidase	54
Effects of hydrogen peroxide on the activation of the transcription factor HIF-1	55
The mode of action of hydrogen peroxide	56
Future perspectives	57
References	57

4.	Freeze-resistance strategies based on antifreeze proteins	61
	<i>P.L. Davies, G.L. Fletcher and C.L. Hew</i>	
	Introduction	61
	Background	61
	Evolution of AFPs	65
	AFP gene expression	69
	Conclusion	75
	References	76
5.	Environmentally induced gene expression: poikilotherm responses to cold	81
	<i>A.Y. Gracey</i>	
	Introduction	81
	Cold acclimation	82
	Identification of cold-induced genes	83
	Temporal expression of cold-induced genes	86
	Regulation of cold-induced gene expression	88
	References	92
6.	Temperature-regulated muscle genes	95
	<i>D.I. O'Connor, J.M. Holmes and A.J. El Haj</i>	
	Temperature and aquatic organisms	95
	Are there temperature-regulated muscle genes in fish and crustacea?	97
	Do muscle molecular developmental cues vary with temperature and is there a critical stage of development in aquatic organisms which is temperature sensitive?	101
	Temperature affects the rate of all processes including muscle transcription and degradation rates	103
	References	105
7.	Influence of cold on gene expression in mammals	109
	<i>B. Cannon, A. Jacobsson and J. Nedergaard</i>	
	Non-shivering thermogenesis	109
	Control of the expression of previously known genes	111
	Identification of genes of known proteins	117
	Identification of genes of unknown proteins	119
	Final remarks	121
	References	122
8.	Small heat shock proteins: in search of functions <i>in vivo</i>	125
	<i>R.M. Tanguay, D.R. Joannisse, Y. Inaguma and S. Michaud</i>	
	Introduction	125
	The s-hsp family in <i>Drosophila melanogaster</i>	127
	Small hsps are expressed differentially in the absence of stress	129
	The s-hsps of <i>D. melanogaster</i> are localized in different intracellular compartments	130
	A search for proteins interacting with s-hsps	130
	Small hsps: modulators of cellular activities or protein-specific chaperones?	132
	References	135

9. Approaches to the analysis of cold-induced barley genes isolated through differential screening of a cDNA library	139
<i>M.A. Hughes, M.A. Dunn and A.P.C. Brown</i>	
Introduction	139
Barley genes isolated through differential screening of a cDNA library	139
Advantages and limitations of the use of differential cDNA library screening in the analysis of low-temperature responses	140
Control of gene expression by low acclimating temperatures	142
Analysis of LTR gene product function	152
Analysis of physiological function: role of LTR genes in frost acclimation	155
References	155
10. Dying according to programme: occurrence in plant developmental processes and in response to environmental cues	159
<i>A. Granell</i>	
Introduction	159
PCD and plant developmental processes	160
PCD in dealing with the environment	162
Morphological, physiological, biochemical and molecular characteristics of plant programmed cell death	164
Evolutionary considerations: origin of PCD	170
Targeting cell death in plants: biotechnological implications	171
References	173
Index	179
