Preface to <i>DNA Replication</i> , Second Edition	xii
Preface to <i>DNA Replication</i> , First Edition	xiv
Preface to <i>DNA Synthesis</i>	xvi

1 DNA Structure and Function 1

1-1 DNA: Past and Present	1	1-6 Size	19	Cruciforms; Triplexes;	
1-2 Primary Structure	4	1-7 Shape	23	Single-Stranded Bubbles	43
1-3 A Double-Helical Structure	8	1-8 Crystal Structures	25	1-13 Intermolecular Structures: R-Loops; D-Loops; Joints; Holliday junctions; Knots and Catenanes	48
1-4 Melting and Reannealing	12	1-9 Supertwisting	31		
1-5 Base Composition and Sequence	16	1-10 Bending	37	1-14 Functions of DNA	51
		1-11 Unusual Structures	41		
		1-12 Intramolecular Secondary Structures: Z-DNA;			

2 Biosynthesis of DNA Precursors 53

2-1 The Building Blocks of DNA Synthesis	53	Conversion to Triphosphate	66	2-10 Salvage Pathways of Nucleotide Synthesis	79
2-2 De Novo and Salvage Pathways of Nucleotide Synthesis	54	2-6 Significance of Pyrophosphate-Releasing Reactions	68	2-11 Thymine and Thymidine Conversion to Thymidylate	85
2-3 Purine Nucleotide Synthesis de Novo	55	2-7 Ribonucleotide Reduction to a Deoxyribonucleotide	69	2-12 Labeling of DNA in Cells	87
2-4 Pyrimidine Nucleotide Synthesis de Novo	62	2-8 Origin of Thymine	75	2-13 Uncommon Nucleotides	90
2-5 Nucleoside Monophosphate		2-9 dUTPase in Thymidylate Biosynthesis	77	2-14 One-Carbon Metabolism	94
				2-15 Traffic Patterns on the Pathways	97

3 DNA Synthesis 101

3-1 Early Attempts at Enzymatic Synthesis of Nucleic Acids	101	3-3 Basic Features of Polymerase Action: Polymerization Step	106
3-2 Basic Features of Polymerase Action: The Template-Primer	103	3-4 Measurement of Polymerase Action	109

4 DNA Polymerase I of *E. coli* 113

4-1	Isolation and Physicochemical Properties	113	4-7	Deoxynucleoside Triphosphate (dNTP) Binding Site	126	4-14	Apparent de Novo Synthesis of Repetitive DNA	144
4-2	Preview of Polymerase Functions	114	4-8	Nucleoside Monophosphate Binding Site	128	4-15	Ribonucleotides as Substrate, Primer Terminus, and Template	150
4-3	Multiple Sites in an Active Center	116	4-9	The 3'→5' Exonuclease: Proofreading	130	4-16	Products of Pol I Synthesis	152
4-4	Proteolytic Cleavage: Three Enzymes in One Polypeptide	116	4-10	Pyrophosphorolysis and Pyrophosphate Exchange	132	4-17	The Polymerase Chain Reaction (PCR)	157
4-5	Structure of the Large Fragment	118	4-11	Kinetic Mechanisms	133	4-18	Mutants and the Physiologic Role of DNA Polymerase in Replication and Repair	159
4-6	DNA Binding Site	122	4-12	The 5'→3' Exonuclease: Excision-Repair	140			
			4-13	The 5'→3' Exonuclease: Nick Translation	142			

5 Prokaryotic DNA Polymerases Other Than *E. coli* Pol I 165

5-1	Discovery of <i>E. coli</i> DNA Polymerases II and III	165	5-5	DNA Polymerase III Holoenzyme of <i>E. coli</i> : ATP Activation	178	5-9	Phage T7 DNA Polymerase	190
5-2	DNA Polymerase II of <i>E. coli</i>	166	5-6	DNA Polymerase III Holoenzyme of <i>E. coli</i> : Structure and Dynamics	178	5-10	DNA Polymerases of Other Phages: ϕ 29, M2, PRD1, N4, T5	192
5-3	DNA Polymerase III Holoenzyme of <i>E. coli</i> : The Core	169	5-7	Other Bacterial DNA Polymerases	182	5-11	Motifs and Homologies Among the DNA Polymerases	194
5-4	DNA Polymerase III Holoenzyme of <i>E. coli</i> : Accessory Subunits	174	5-8	Phage T4 DNA Polymerase	187			

6 Eukaryotic DNA Polymerases 197

6-1	Introduction	197	6-7	DNA Polymerases in Growth and Development	213	6-10	Terminal Deoxynucleotidyl Transferase (TdT)	223
6-2	DNA Polymerase α	200	6-8	DNA Virus-Induced DNA Polymerases	215			
6-3	DNA Polymerases δ and ϵ	204	6-9	RNA-Directed DNA Polymerases: Reverse Transcriptases (RTs) and Telomerase	217			
6-4	DNA Polymerase β	207						
6-5	DNA Polymerase γ	209						
6-6	DNA Polymerases of Fungi, Slime Molds, Protozoa, and Sea Urchins	210						

7 RNA Polymerases 227

7-1	Comparison of RNA and DNA Polymerases	227	7-6	Chain Elongation and Pausing by <i>E. coli</i> RNA Polymerase	244	7-11	Eukaryotic RNA Polymerase III	262
7-2	Structure of <i>E. coli</i> RNA Polymerase	229	7-7	Termination of Transcription by <i>E. coli</i> RNA Polymerase	247	7-12	Eukaryotic RNA Polymerase I and Mitochondrial RNA Polymerase	266
7-3	Overview of Functions and Regulation of <i>E. coli</i> RNA Polymerase	233	7-8	Regulation of Transcription by <i>E. coli</i> RNA Polymerase	250	7-13	RNA Polymerases in Viral Infections	268
7-4	Template Binding and Site Selection by <i>E. coli</i> RNA Polymerase	234	7-9	Eukaryotic RNA Polymerases	254	7-14	Relationships of RNA Synthesis to DNA Replication	271
7-5	Chain Initiation by <i>E. coli</i> RNA Polymerase	240	7-10	Eukaryotic RNA Polymerase II	256			

8 Primases, Primosomes, and Priming 275

8-1 The Need for Priming in DNA Synthesis	275	8-3 <i>E. coli</i> Primase (<i>dnaG</i> Gene Product)	279	8-6 Eukaryotic Primases	296
8-2 Discovery of RNA-Primed DNA Synthesis	276	8-4 <i>E. coli</i> Primosomes	283	8-7 Endonucleolytic Priming	298
		8-5 Phage and Plasmid Primases	292	8-8 Terminal Protein Priming	303

9 Ligases and Polynucleotide Kinases 307

9-1 Assays and Discovery of DNA Ligases	307	9-4 Substrate Specificity of DNA Ligases	314
9-2 Properties and Abundance of DNA Ligases	308	9-5 Functions in Vivo of DNA Ligases	316
9-3 Enzymatic Mechanism of DNA Ligases	311	9-6 RNA Ligases	319
		9-7 Polynucleotide Kinases	320

10 DNA-Binding Proteins 323

10-1 Introduction	323	10-4 M13 Phage Gene 5 Protein; Other Phage and Plasmid SSBs	332	10-8 Prokaryotic Histone-Like Proteins	345
10-2 Single-Strand Binding Proteins (SSBs)	325	10-5 <i>E. coli</i> SSB	334	10-9 Regulatory Proteins	348
10-3 T4 Phage Gene 32 Protein (Gp32)	329	10-6 Eukaryotic SSBs	336	10-10 Covalent Protein-DNA Complexes	353
		10-7 Histones and Chromatin	339		

11 DNA Helicases 355

11-1 Helicases: Actions and Polarity	355	Recombination, Conjugal Transfer, or Transcription	367
11-2 Replicative Helicases of <i>E. coli</i> and Phages	358	11-4 Eukaryotic Helicases	373
11-3 Prokaryotic Helicases That Function in Repair,		11-5 Homologies and Mechanisms	374

12 Topoisomerases 379

12-1 Topoisomerases: Assays and Functions	379	12-4 Eukaryotic Type I Topoisomerases	392	12-6 Functions of the Eukaryotic Topoisomerases	395
12-2 <i>E. coli</i> Topoisomerases I and III	383	12-5 Eukaryotic Type II Topoisomerases	394	12-7 Other Topoisomerases	398
12-3 <i>E. coli</i> DNA Gyrase (<i>E. coli</i> Topoisomerase II)	387				

13 Deoxyribonucleases 403

13-1 Deoxyribonucleases in Vitro and in Vivo	403	13-6 Restriction Endonucleases: General Considerations	416	13-8 Restriction Endonucleases: Specific Cleavage (Type II)	420
13-2 Exonucleases: 3'→5'	404	13-7 Restriction Endonucleases: Nonspecific Cleavage (Type I)	418	13-9 Nucleases in Repair and Recombination	425
13-3 Exonucleases: 5'→3'	410			13-10 Ribonuclease H (RNase H)	436
13-4 Processivity of the Exonucleases	412				
13-5 Endonucleases	414				

14 Inhibitors of Replication 439

14-1	Inhibitors as Drugs and Reagents	439	14-4	Inhibitors That Modify DNA	451
14-2	Inhibitors of Nucleotide Biosynthesis	441	14-5	Inhibitors of Topoisomerases	461
14-3	Nucleotide Analogs Incorporated into DNA or RNA	446	14-6	Inhibitors of Polymerases and Replication Proteins	463
			14-7	Radiation Damage of DNA	470

15 Replication Mechanisms and Operations 471

15-1	Basic Rules of Replication	471	15-5	Replication Proteins and Reconstituted Systems	483	15-10	Uracil Incorporation in Replication	500
15-2	Replication Fork: Origin, Direction, Structure	473	15-6	Enzymology of the Replication Fork	487	15-11	Rolling-Circle Replication	502
15-3	Semidiscontinuous Replication	475	15-7	Start of DNA Chains	490	15-12	Termination of Replication	503
15-4	Replication Genes and Crude Systems	478	15-8	Processivity of Replication	494			
			15-9	Fidelity of Replication	496			

16 Genome Origins 511

16-1	Identification of Origins	511	16-4	Other Prokaryotic Origins	533
16-2	The <i>E. coli</i> Chromosomal Origin (<i>oriC</i>)	521	16-5	Eukaryotic Virus and Organelle Origins	542
16-3	Initiation from the <i>E. coli</i> Chromosomal Origin (<i>oriC</i>)	524	16-6	Eukaryotic Chromosome Origins	547

17 Bacterial DNA Viruses 553

17-1	Viral Windows on Cellular Replication	553	17-4	Small Polyhedral Phages: ϕ X174, S13, G4	571	17-7	Temperate Phages: λ , P22, P2, P4, P1, Mu	610
17-2	Stages in the Viral Life Cycle	555	17-5	Medium-Sized Phages: T7 and Other T-Odd Phages (T1, T3, T5)	576	17-8	Other Phages: N4, PM2, PR4, and the <i>Bacillus</i> Phages (SPO1, PBS1, PBS2, ϕ 29, SPP1)	632
17-3	Small Filamentous (F ϕ) Phages: M13, fd, f1	557	17-6	Large Phages: T4 and Other T-Even Phages (T2, T6)	597			

18 Plasmids and Organelles 637

18-1	Bacterial Plasmids	637	18-6	F Plasmid	658	18-10	Yeast Plasmids: The 2μ Circle and Others	675
18-2	ColE1	641	18-7	Bacterial Conjugation	664	18-11	Mitochondria, Kinetoplasts, and Chloroplasts	680
18-3	pSC101	648	18-8	Broad-Host-Range Plasmids	671			
18-4	R Plasmids: R1 and R100	650	18-9	Plasmids of Gram-Positive Bacteria	672			
18-5	R6K	655						

19 Animal DNA Viruses and Retroviruses 689

19-1	Utility of Animal Viruses	689	19-3	Parvoviruses: Autonomous and Helper-Dependent Viruses	700	19-6	Poxviruses: Vaccinia	713
19-2	Papovaviruses: Simian Virus 40 (SV40), Polyoma Virus, and Bovine Papilloma Virus (BPV)	690	19-4	Adenoviruses	703	19-7	Retroviruses	717
			19-5	Herpesviruses	709	19-8	Hepadna Viruses: Hepatitis B Virus (HBV)	724
						19-9	Plant and Insect Viruses	727

20 Regulation of Chromosomal Replication and Cell Division 731

20-1	Regulation of Replication: Multiple Types of Control	731		Chromosome-Membrane Association	747
20-2	The Bacterial Cell Cycle	732	20-5	Bacterial Cell Division	753
20-3	Control of Initiation of Bacterial Chromosomes	734	20-6	The Eukaryotic Cell Cycle	759
20-4	Bacterial Envelopes and		20-7	Control of Replication in Eukaryotes	762

21 Repair, Recombination, Transformation, Restriction, and Modification 771

21-1	DNA Damage and Mutations	771	21-4	Repair in Disease and Aging	788	21-7	Transposition	817
21-2	Repair by Photolysis, Dealkylation, and Nucleotide Excision	775	21-5	Homologous Recombination	791	21-8	Bacterial Transformation and Competence	822
21-3	Repair Responses and Regulation	784	21-6	Site-Specific Recombination	806	21-9	Restriction and Modification	827

22 Synthesis of Genes and Chromosomes 833

22-1	Origin of DNA on Earth	833	22-4	Assembling Genes into Chromosomes: Recombinant DNA	844
22-2	Determination of DNA Sequence	837	22-5	Homage to Enzymes; An epilogue	849
22-3	Chemical Synthesis of Oligodeoxyribonucleotides and Genes	840
