| <i>List of Contributors</i> .....                                                           | ix   |
| <i>List of Abbreviations</i> .....                                                          | xiii |
| <i>Introduction</i> .....                                                                   | xv   |
| <b>1. Mammalian Cell Cycle Regulation</b> .....                                             | 1    |
| Rajat Singhania, R. Michael Sramkoski, James W. Jacobberger,<br>and John J. Tyson           |      |
| <b>2. Spindles and Active Vortices</b> .....                                                | 25   |
| David A. Head, W. J. Briels, and Gerhard Gompper                                            |      |
| <b>3. Actomyosin-Dependent Cortical Dynamics</b> .....                                      | 49   |
| Patrizia Sommi, Dhanya Cheerambathur, Ingrid Brust-Mascher,<br>and Alex Mogilner            |      |
| <b>4. Filament Depolymerization During Bacterial Mitosis</b> .....                          | 71   |
| Edward J. Banigan, Michael A. Gelbart, Zemer Gitai, Ned S. Wingreen,<br>and Andrea J. Liu   |      |
| <b>5. Actin Ring Constriction</b> .....                                                     | 95   |
| Alexander Zumdick, Karsten Kruse, Henrik Bringmann,<br>Anthony A. Hyman, and Frank Jülicher |      |
| <b>6. Curved Activators and Cell-Membrane Waves</b> .....                                   | 109  |
| Barak Peleg, Andrea Disanza, Giorgio Scita, and Nir Gov                                     |      |
| <b>7. Actin Waves and Phagocytic Cup Structures</b> .....                                   | 133  |
| Günther Gerisch                                                                             |      |
| <b>8. Yeast and Scaling</b> .....                                                           | 145  |
| Daniel Riveline                                                                             |      |
| <b>9. Cellular Shapes from Protrusive and Adhesive Forces</b> .....                         | 157  |
| Roie Shlomovitz, Kathrin Schloen, Theresia Stradal, and Nir S. Gov                          |      |
| <b>10. Amoeboid Cells' Protrusions</b> .....                                                | 193  |
| Peter J. M. Van Haastert                                                                    |      |
| <b>11. Collective Cell Migration</b> .....                                                  | 205  |
| Masataka Yamao, Honda Naoki, and Shin Ishii                                                 |      |

|                                                                                         |            |
