Introduction	7
What is a ground cover plant?	11
The battle for resources	11
A different kind of gardening	13
Habit of growth	15
The classification of ground cover plants	16
Carpet or mat formers	16
Sprawlers	16
Hummock formers	17
Clump formers	19
Spreaders	19
Rosette formers	20
Plant names	21
Designing your garden	23
Colour, line, form and texture	24
Calculating how many plants you will need	26
The best height for ground cover plants	27
Propagating New Zealand native ground cover plants	29
Choosing your propagation method	29
Seeds and spores	30
Growing plants by seed or by vegetative methods	30
Suiting the environment: provenance and hybrids	30
Propagating by seed	31
Extracting seed	32
Seed storage	33
Seed dormancy	34
Sowing seeds	35
Propagation by vegetative means	36
Division of clumps	37
Layering	38
Rhizomes	38

Cuttings	38
Stem cuttings	39
Leaf cuttings and plantlets	40
Procedure for setting cuttings	41
Potting up or planting out rooted cuttings	42
Placement of container-grown plants	43
Planting out established plants	44
Planting out from the open ground	44
Planting out from containers	46
Planting times	46
Soil and potting mix	46
Planting depth and staking	47
Ground preparation: weeds, cultivation and herbicides	49
The battle against weeds	49
Types of weeds	50
Annuals versus perennials	51
Cultivation	54
Herbicides	55
Types of herbicide	55
Applying herbicides: some tips	56
Using herbicides at different stages	56
Before planting	57
Immediately post planting	57
Post planting in established ground cover	58
Which herbicide should I use?	59
Other methods of weed control	60
Using mulch after planting	60
Weed removal by physical means	61
Ground cover plants	63
