Preface	v
Editor.....	vii
List of contributing authors	vii
Abbreviations	xvii
Acknowledgements	xxv
1 Three-phase partitioning	1
1.1 Method.....	2
1.2 The mechanism of TPP	3
1.3 A practical example – the isolation of cathepsin L from liver tissue.....	4
1.4 Other applications.....	5
<i>Clive Dennison</i>	
2 Folding and degradation functions of molecular chaperones	13
2.1 Introduction.....	13
2.2 The domain structure of Hsc/Hsp70.....	13
2.3 The Hsc/Hsp70 reaction cycle	15
2.4 Cochaperones determine the function of Hsc/Hsp70	16
2.5 In vitro reconstitution and functional analysis of the Hsc/Hsp70 chaperone system	16
2.6 Measuring the ATPase activity of Hsc/Hsp70.....	18
2.7 Determining chaperone activity.....	18
2.8 In vitro reconstitution of chaperone-assisted ubiquitylation	19
2.9 Concluding remarks	21
<i>Michael Dreiseidler, Anna Ulbricht, and Jörg Höhfeld</i>	
3 Membrane protein folding in detergents	23
3.1 Introduction.....	23
3.2 Interactions of membrane proteins with detergents	24
3.3 Techniques to characterize TM proteins in detergents	29
3.4 Applications of TM protein-detergent complexes	35
3.5 Conclusions.....	41
<i>David V. Tulumello and Charles M. Deber</i>	
4 Glycoprotein-folding quality control in the endoplasmic reticulum	47
4.1 Introduction.....	47
4.2 Glycoprotein-folding quality control (QC)	47
4.3 The UGGT.....	49
4.4 GlI.....	52
4.5 CNX and CRT	54

4.6	ERp57.....	57
4.7	Methods to study glycoprotein folding QC.....	58
	<i>Julio J. Caramelo and Armando J. Parodi</i>	
5	Conformational dynamics in peptides and proteins studied by triplet-triplet energy transfer	73
5.1	Introduction.....	73
5.2	Concept of TTET experiments to study intrachain loop formation in polypeptide chains	73
5.3	Diffusion-controlled loop formation in unstructured polypeptide chains	79
5.4	Detection of fast conformational fluctuations in folded peptides and proteins by TTET	85
5.5	Conclusions.....	91
	<i>Andreas Reiner, Beat Fierz, and Thomas Kiefhaber</i>	
6	Protein import into the intermembrane space of mitochondria.....	95
6.1	Introduction.....	95
6.2	The mitochondrial IMS.....	95
6.3	The mitochondrial disulfide relay.....	96
6.4	The sulfhydryl oxidase Erv1.....	96
6.5	The oxidoreductase Mia40.....	98
6.6	Substrates of the mitochondrial disulfide relay	98
6.7	Methods to study mitochondrial protein translocation	99
6.8	General comments to the analysis of thiol-disulfide redox states.....	105
6.9	Outlook.....	107
	<i>Jan Riemer and Johannes M. Herrmann</i>	
7	On-membrane identification of gel-resolved proteins by matrix-assisted laser desorption ionization mass spectrometry (MALDI-MS)	113
7.1	Introduction.....	113
7.2	Methods for identifying proteins electroblotted onto the PVDF membrane	116
7.3	General comments to the analysis of proteins on membranes.....	118
7.4	PVDF membranes or diamond-like carbon-coated (DLC) stainless steel plates?	124
7.5	Concluding remarks	124
	<i>Yoko Ino, Reiko Kazamaki, and Hisashi Hirano</i>	
8	Analysis of protein complexes using chemical cross-linking and mass spectrometry	127
8.1	Introduction.....	127
8.2	Reagents for chemical cross-linking.....	127
8.3	The chemical cross-linking workflow	131
8.4	MS and data analysis	133
8.5	Practical examples.....	136

8.6	The use of spatial constraints for modeling.....	137
8.7	Conclusion and outlook	138
	<i>Alexander Leitner</i>	
9	Single-crystal spectroscopy correlated with X-ray crystallography provides complementary perspectives on macromolecular function	143
9.1	Introduction.....	143
9.2	Ionizing radiation: essential for crystal structures; a problem and a reagent.....	146
9.3	Cofactors in biology provide spectroscopic access to reaction cycles	147
9.4	Single-crystal spectroscopy correlated with X-ray diffraction.....	150
9.5	Correlated studies at beamline X26-C of the NSLS.....	153
9.6	Future prospects	159
	<i>Allen M. Orville</i>	
10	Wide-angle X-ray solution scattering (WAXS).....	165
10.1	Introduction	165
10.2	Sample preparation	166
10.3	Sample-handling robot.....	167
10.4	Data collection.....	168
10.5	Data processing.....	169
10.6	Structural information.....	171
10.7	Size and shape	171
10.8	Secondary and tertiary structure	172
10.9	Quaternary structure	173
10.10	Structural changes.....	175
10.11	Unfolding.....	177
10.12	Molecular modeling.....	179
10.13	Modeling of structural fluctuations	180
10.14	Outlook	182
	<i>Lee Makowski, Oleg A. Makarov, Shenglan Xu, and Robert F. Fischetti</i>	
11	Where purity matters: recombinant versus synthetic peptides in beta amyloid formation	187
11.1	Amyloid fibrils possess a defined quaternary structure.....	187
11.2	The importance of purity for reproducible kinetics of amyloid fibril formation in vitro: the A β as an example	189
11.3	Future challenges for the characterization of fibrillar structures	192
	<i>Toni Vagt and Rudi Glockshuber</i>	
12	Chemical modification of proteins in living cells.....	197
12.1	Introduction	197
12.2	Site-specific labeling of proteins with chemical probes.....	198
12.3	Selecting an appropriate labeling technique	206
12.4	Live cell applications.....	206
12.5	Technical Protocols for SNAP- tag labeling	211
	<i>Ariele Hanek and Ivan R. Corrêa Jr.</i>	

13 Proteomics of human bronchoalveolar lavage fluid: discovery of biomarkers of chronic obstructive pulmonary disease (COPD) with difference gel electrophoresis (DIGE) and mass spectrometry (MS)	219
13.1 Introduction	219
13.2 Application of DIGE platform to COPD biomarker discovery	222
13.3 Outlook	233
<i>Francesco Giorgianni, Valentina Mileo, Li Chen, Dominic M. Desiderio, and Sarka Beranova-Giorgianni</i>	
14 Proteomic analysis of Duchenne muscular dystrophy (DMD)	235
14.1 Introduction	235
14.2 Materials	236
14.3 Methods	237
14.4 Results and Discussion	240
14.5 Conclusion	248
<i>Kunigunde Stephani-Kosin, Hisashi Hirano, and Roza Maria Kamp</i>	
15 Target-oriented peptide arrays in a palliative approach to cystic fibrosis (CF)	249
15.1 Introduction	249
15.2 PDZ domains	250
15.3 CF	252
15.4 Role of PDZ domains in CFTR trafficking	253
15.5 Target-oriented peptide arrays	254
15.6 An engineered peptide inhibitor of CAL extends the half-life of $\Delta F508$ -CFTR	256
15.7 Methods	260
15.8 Outlook	264
<i>Prisca Boisguerin, Dean R. Madden, and Rudolf Volkmer</i>	
16 Probing protein dynamics in vivo using backbone cyclization: bacterial acyl carrier protein as a case study	271
16.1 Introduction	271
16.2 In vivo protein cyclization, biophysical analyses and functional assays	275
16.3 Outlook	288
<i>Gerrit Volkmann, Peter W. Murphy, Elden E. Rowland, John E. Cronan Jr., and David M. Byers</i>	
17 The protein epitope mimetic approach to protein-protein interaction inhibitors	295
17.1 Introduction	295
17.2 Mechanisms of protein-protein interactions	295
17.3 Small-molecule screening approaches	299
17.4 Protein epitope mimetic approaches	301
<i>John A. Robinson and Kerstin Moehle</i>	

18 The structural biology of α_1-antitrypsin deficiency and the serpinopathies	325
18.1 Clinical phenotypes of the serpinopathies.....	325
18.2 The serpin mechanism of protease inhibition	327
18.3 Folding, misfolding and polymerization.....	328
18.4 Serpin folding.....	330
18.5 Dissecting the pathways of polymerization.....	330
18.6 Cellular processing of polymers.....	337
18.7 Stem cell technology to generate models of disease.....	340
18.8 Conclusions.....	340
<i>Bibek Gooptu and David A. Lomas</i>	
Index.....	345
