

Contents

Preface — V

List of Contributing Authors — IX

1 Introduction — 1

1.1 Industrial Use and Perspectives of Animal Cell Culture — 1

2 Cell Lines — 11

2.1 Generation of Cell Lines and Biotechnological Applications — 11

2.2 CHO History, CHO Evolution and CHO Genomics –
an Unsolvable Enigma? — 38

2.3 Cell Lines for Vaccine Production — 60

2.4 Cell Line Monitoring: Molecular Cytogenetic Characterization — 87

2.5 Quality Control Essentials in Human Cell Culture:
Cell Line Cross-contamination and Microbiological Infections — 102

3 Genetic Engineering of Cells — 115

3.1 Cell Line Evolution and Engineering — 115

3.2 Chromosome Rearrangements and Gene Amplification — 127

3.3 Synthetic Biology Principles for Engineering Mammalian
Designer Cells — 144

3.4 Rational Approaches for Transgene Expression:
Targeted Integration and Episomal Maintenance — 173

3.5 Manipulation of Cell Growth, Metabolism
and Product Quality Attributes — 216

4 Engineering of the Product — 247

4.1 Control of Biotherapeutics Glycosylation — 247

4.2 Manufacturing of Complex Biotherapeutic Protein Products:
Medical Need and Rational for Monoclonal Antibody Mixtures,
Multispecific Formats, and Fc-fusion Proteins — 280

5 Basic Aspects of Animal Cell Cultivation — 301

5.1 Physiology and Metabolism of Animal Cells for Production — 301

5.2 Functional -Omics for Cell Lines and Processes:
The -Omics Technologies on the Example of CHO Cells — 326

5.3 Nutrient Media for Cell Culture Technology — 368

6 Upstream and Downstream Process Technology — 389

6.1 Bioreactors for Animal Cell Culture — 389

6.2 High Cell Density Cultivation Process — 427

6.3	Industrial Cell Culture Process Scale-up Strategies and Considerations — 455
6.4	Extraction and Purification of Biologics from Cell Culture: Monoclonal Antibody Downstream Processing — 489
7	Monitoring and Control of Processes and Products — 523
7.1	Concepts and Technologies for Advanced Process Monitoring and Control — 523
7.2	Analytical Techniques and Quality Control of Protein Therapeutics — 571
7.3	Process Characterization for Upstream and Downstream Process Development — 598
8	Pharmaceutical Aspects of Biologics from Animal Cell Culture Processes — 649
8.1	Spatiotemporally Controlled Delivery of Biopharmaceuticals — 649
	Index — 693
