Preface — V

List of Authors — IX

1	Microbial applications in the food industry — 1
1.1	Abstract — 1
1.2	Introduction — 1
1.3	Biology of microorganisms used in food industry — 3
1.4	Role of microorganisms in the food industry — 4
1.4.1	Fermented foods — 4
1.4.2	Food safety and spoilage — 9
1.4.3	Organic acids — 15
1.4.4	Food enzymes — 17
1.4.5	Amino Acids — 18
1.4.6	Nutraceuticals and food color — 18
1.4.7	Sugar alcohols — 19
1.4.8	Microalgae — 20
1.5	Bioengineering in the food industry — 20
1.5.1	Engineered starter cultures for fermentation — 21
1.5.2	Engineered microorganisms for food ingredient production — 21
1.6	Conclusion — 22
1.7	References — 22
2	Microbial applications for fabric and textile industries — 33
2.1	Abstract — 33
2.2	Introduction — 33
2.3	Enzymes for the recovery of cellulose fibres — 35
2.4	Bast fibre recovery — 35
2.4.1	Wood cellulose fibre recovery — 37
2.5	Enzymes in cotton processing — 40
2.5.1	Desizing — 40
2.5.2	Scouring — 41
2.5.3	Bleaching — 42
2.5.4	Combined desizing, scouring and bleaching processes — 43
2.6	Enzymes in protein fibre processing — 44
2.6.1	Wool processing — 44
2.6.2	Silk processing — 46
2.7	Biotechnical processing of fibres made from synthetic polymers — 47
2.7.1	Biofunctionalization of polyester fibres — 49
2.7.2	Biofunctionalization of polyamides — 51

2.7.3	Biofunctionalization of acrylonitriles —	52
2.8	Enzymes in textile dyeing and functionalization or finishing processes —	53
2.8.1	Dyeing related enzyme processes —	54
2.8.2	Cellulose fabric finishing or polishing —	55
2.8.3	Enzymatic ageing of Denim fabrics —	57
2.9	Removal of unfixed dyes and dye effluent treatment —	59
2.10	Enzymes in textile after-care —	61
2.11	Conclusions —	63
2.12	References —	64
3	Microbial peptides and peptibols —	79
3.1	Introduction —	79
3.2	AMPs —	80
3.3	AMPs antimicrobial activity —	80
3.4	AMPs source —	81
3.5	Microbial AMPs —	82
3.5.1	Fungal AMPs —	82
3.6	Peptaibiotics —	83
3.7	Peptaibols —	85
3.8	Peptaibol biosynthesis —	85
3.8.1	Peptibols activity —	86
3.9	Bacterial AMPs —	87
3.9.1	Mechanisms of bacteriocins action —	88
3.10	AMP application in medicine —	88
3.11	AMPs in plant protection —	88
3.12	AMP application in pharmacy and biotechnology —	89
3.13	AMP in food industry —	89
3.14	References —	90
4	Introspecting Bacteriophage Specificity and Decoding Phage Enzyme Non-Specificity for Antimicrobial Applications —	97
4.1	Introduction —	97
4.2	Case studies —	98
4.2.1	Procedure for studying antimicrobial action of mixture of phage enzymes —	99
4.2.2	Results —	101
4.3	Discussion —	102
4.4	References —	103

5	Microbial production of enzymes: An Overview — 107
5.1	Abstract — 107
5.2	Introduction — 107
5.3	Production of enzymes — 108
5.3.1	Submerged fermentation — 109
5.3.2	Solid state fermentation — 109
5.4	Enzymes of industrial importance — 110
5.4.1	Amylases — 110
5.4.2	Glucose isomerase (D glucose ketoisomerase) — 113
5.4.3	Proteases — 113
5.4.4	Lactase — 115
5.4.5	Pectinases — 116
5.4.6	Lipases — 116
5.4.7	Penicillin acylase — 117
5.4.8	Catalases — 119
5.4.9	Alcohol Dehydrogenase — 120
5.4.10	Glucose oxidase — 121
5.4.11	Galactose oxidase — 122
5.4.12	Hexokinase — 123
5.4.13	Muramidase — 123
5.4.14	Cholesterol oxidase — 124
5.4.15	Asparaginase — 126
5.4.16	Streptokinase — 127
5.5	Future recommendation — 132
5.6	References — 133
6	Microbial Pigments — 139
6.1	Introduction — 139
6.2	Microbial sources of natural color — 140
6.3	Microbial pigments in natural sites — 141
6.4	Pigments and plant endophytes — 144
6.5	Conclusion — 147
6.6	References — 147
7	Role of nutrient in microbial developments and microbial metabolic diversity — 151
7.1	Abstract — 151
7.2	Introduction — 151
7.3	Microbial Diversity — 152
7.3.1	Microbial Nutrition — 153
7.3.2	Microbial Communities — 155

7.4	Microbial Development —	158
7.4.1	Spore Forming —	159
7.4.2	Formation of Fruiting Body —	159
7.4.3	Formation of Biofilm —	160
7.5	Microbial Metabolic Diversity —	163
7.5.1	Microbial Metabolites —	164
7.5.2	Natural Microbial Products —	165
7.5.3	Gut Microbiota and Human Health —	166
7.5.4	Therapeutic Spectrum of Bacterial Metabolites —	169
7.6	Microbiome and Sustainable Healthcare —	169
7.7	Conclusion and Prospects —	171
7.8	References —	173
8	Microbes in wine and beer industries —	177
8.1	Abstract —	177
8.2	Introduction —	177
8.3	Microbes in Wine —	178
8.4	Fermenting microorganisms undergoing primary fermentation —	180
8.5	Flavoring microorganisms undergo secondary fermentation —	181
8.6	Spoilage microorganisms —	182
8.7	Microbes in Beer —	184
8.8	Yeast Management —	186
8.9	Primary fermentation —	189
8.10	Maturation and Flavor Formation —	190
8.11	Main strategies for avoiding microorganism spoilage in wine and beer —	193
8.12	Perspectives in wine and beer industry —	194
8.13	Bibliography —	195
9	Use of tetracyclines and β-lactams in agriculture: Fate in the environment and occurrence of antibiotic-resistance determinants —	197
9.1	Introduction —	197
9.2	Fates of tetracyclines and β -lactams in waste and soils —	199
9.3	Mechanisms of resistance to tetracyclines and β -lactams and spread of the genetic determinants of antibiotic resistance in soil and manure —	201
9.3.1	Tetracycline resistance genes —	201
9.3.2	β -lactam resistance genes —	202
9.3.3	Spread of tetracyclines and β -lactams resistant bacteria in the environment —	203

9.4	Current Developments and future challenges —	204
9.4.1	Probiotics —	205
9.4.2	Prebiotics and other molecules —	205
9.4.3	New generation of antibiotics —	206
9.4.4	Manure management —	206
9.5	Conclusions —	206
9.6	References —	207
10	Industrial microorganisms: tolerance to antibiotics and application of antimicrobial agents —	213
10.1	Abstract —	213
10.2	Introduction —	213
10.3	Antimicrobial agents —	215
10.3.1	Non-bacteriocin substances —	215
10.3.2	Bacteriocin and bacteriocin-like substances —	216
10.3.3	Application of antimicrobials agents in Food Industry —	218
10.4	Antibiotic resistance of microbial food cultures —	221
10.4.1	Strategies for microbial antibiotic resistance —	221
10.4.2	The European regulatory framework —	222
10.4.3	Antibiotic resistance in traditional fermented foods —	223
10.4.4	Antibiotic resistance: safety of starter and probiotic microorganisms —	227
10.5	Concluding Remarks —	228
10.6	References —	229
11	Microbial biofuel production: An overview on recent developments —	237
11.1	Abstract —	237
11.2	Introduction —	237
11.3	Ethanol —	238
11.4	First generation ethanol —	239
11.4.1	Energy balance and greenhouse emissions —	241
11.4.2	First generation ethanol in Brazil —	243
11.4.3	First generation ethanol in USA —	245
11.5	Second generation bioethanol —	248
11.5.1	The role of pretreatment —	249
11.5.2	Enzymatic hydrolysis of the plant cell wall —	250
11.5.3	Fermenting microorganisms —	255
11.6	Third generation bioethanol —	256
11.6.1	Algae —	257
11.6.2	Cyanobacteria —	257

11.6.3	Bioethanol production — 258
11.7	Conclusion and perspectives — 259
11.8	References — 261
12	Fungal cell factories and their applications — 269
12.1	Introduction — 269
12.2	Genetic transformation of the potential specific gene — 273
12.3	Re-engineering gene targeting — 275
12.4	RNA technologies for genetic engineering — 278
12.5	Designing gene engineering strategy — 281
12.6	Heterologous Proteins Expressed in fungi — 281
12.7	Fungi as cell factories for fungal enzymes — 285
12.8	Fungi as cell factories for non-fungal proteins — 288
12.9	Production of bioenergy from microbial biomass — 289
12.9.1	Genetic engineering of photosynthetic microbial cell factories — 291
12.9.2	Incompatibility of oxygenic photosynthesis with anaerobic metabolism — 293
12.9.3	Host tolerance to high concentration of recombinant pathway product and/or precursors — 294
12.9.4	Assembly of complex enzymes — 294
12.9.5	General physiological and metabolic adaptations — 294
12.9.6	Biotechnological use of microalgal-bacterial consortia as multispecies microbial cell factories — 295
12.10	Conclusion remarks — 295
12.11	References — 296
13	Evaluation of an indirect method for rapid bacterial quantification in wastewaters — 309
13.1	Abstract — 309
13.2	Introduction — 309
13.3	Methodology — 312
13.3.1	Bacterial isolates — 312
13.3.2	Calibration curve and bacterial quantification — 312
13.3.3	Analytic determinations and statistical analyzes — 313
13.4	Results and discussion — 314
13.4.1	Morphological characterization — 314
13.4.2	Calibration curve — 316
13.4.3	Characterization of wastewater samples for application of calibration curve — 317
13.4.4	Validation of indirect method and influence of physicochemical parameters — 319

13.5	Conclusions — 320
13.6	Acknowledgements — 321
13.7	References — 321
 14	Cyanobacteria: biotechnological and environmental applications — 325
14.1	Introduction — 325
14.2	Biotechnological applications — 327
14.2.1	Cyanobacteria as biofertilizers — 327
14.2.2	Cyanobacteria as a resource for bioenergy — 328
14.2.3	Cyanobacterial biopolymers — 330
14.2.4	Cyanobacterial bioactive compounds — 330
14.2.5	Cyanobacteria for biotransformation purposes — 335
14.3	Environmental applications — 336
14.3.1	Cyanoremediation of metal ions — 337
14.3.2	Cyanoremediation of hydrocarbons — 344
14.3.3	Wastewater treatment by cyanoremediation — 347
14.4	Current challenges and perspectives of cyanoremediation — 352
14.5	References — 354
 15	Improvement of functional attributes of kernels of wild legume <i>Canavalia maritima</i> by <i>Rhizopus oligosporus</i> — 369
15.1	Introduction — 369
15.2	Seeds and Processing — 370
15.3	Assessment of Functional Properties — 371
15.3.1	Protein Solubility — 371
15.3.2	Gelation — 371
15.3.3	Water- and Oil-Absorption Capacities — 371
15.3.4	Emulsion Properties — 372
15.3.5	Foam Properties — 372
15.4	Data Analysis — 372
15.5	Discussion — 373
15.5.1	Protein Solubility — 373
15.5.2	Water-Absorption Capacity — 375
15.5.3	Oil-Absorption Capacity — 376
15.5.4	Gelation — 376
15.5.5	Emulsion Properties — 378
15.5.6	Foam Properties — 383
15.6	Principal Component Analysis — 383
15.7	Summary — 385
15.8	References — 386
