Preface — v

Contributing authors — xiii

Evangelos Marcoléfas, Ianina Altshuler and Lyle G. Whyte

1 Advanced microbial cultivation methodologies and their applicability in cryoenvironments — 1

- 1.1 Introduction — 1
- 1.2 Diffusion chamber — 3
- 1.3 Microbial trap — 7
- 1.4 Isolation chip — 8
- 1.5 Micro-petri dish — 10
- 1.6 Hollow-fiber membrane chamber — 11
- 1.7 Gel microdroplets — 13
- 1.8 In situ cultivation tip (I-tip) — 14
- 1.9 Soil substrate membrane system — 14
- 1.10 Applicability in cryoenvironments — 16
- 1.11 Concluding remarks — 18
- References — 18

Yong-Hoe Choe and Yoo Kyung Lee

2 Analysis of lithic microbial communities — 23

- 2.1 Introduction — 23
- 2.1.1 Lithic habitats and their geology — 23
- 2.1.2 Distribution and diversity of lithic microorganisms — 24
- 2.1.3 Traditional approaches to assess lithic microbial community — 24
- 2.2 Analysis methods for lithic microbial community — 25
- 2.2.1 Rock sampling — 25
- 2.2.2 X-ray fluorescence spectrometry (XRF) analysis — 25
- 2.2.3 Inductively coupled plasma-mass-spectrometer — 26
- 2.2.4 Mercury intrusion porosimetry (MIP) — 26
- 2.2.5 Pore structure analysis by X-ray Microfocused Computed Tomography (X-ray μ -CT) — 26
- 2.2.6 PCR amplification and sequencing — 26
- 2.2.7 Statistical analysis — 27
- 2.3 Concluding remarks — 28
- References — 28

Júnia Schultz and Alexandre Soares Rosado

3 Use of microbes from extreme environments for biotechnological applications — 33

- 3.1 Introduction — 33
- 3.2 Extremophilic microbe potential: the search for bioproducts and their biotechnological applications — 35
 - 3.2.1 Thermophiles and hyperthermophiles — 35
 - 3.2.2 Psychrophiles — 37
 - 3.2.3 Acidophiles — 39
 - 3.2.4 Alkaliphiles — 40
 - 3.2.5 Piezophiles — 41
 - 3.2.6 Radioresistants — 42
- 3.3 Approaches and new trends — 44
- 3.4 Conclusions — 47
- References — 48

Mia M. Howard, Laura M. Kaminsky, André Kessler and Terrence H. Bell

4 Merging microbial and plant profiling to understand the impact of human-generated extreme environments on natural and agricultural systems — 57

- 4.1 Generation of extreme environments through human activity — 57
 - 4.1.1 Examples of human disturbance to plant systems — 58
 - 4.1.2 Microbes affect plant communities and phenotypes — 65
 - 4.1.3 Plant breeding and plant-microbe relationships — 66
- 4.2 Considerations for studying plant-microbe interactions in human-altered habitats — 67
 - 4.2.1 Surveys along artificial or natural gradients of disturbance — 68
 - 4.2.2 Targeted manipulative experiments — 69
 - 4.2.3 Techniques for assessing soil microbial communities and plant phenotypes in the field — 70
 - 4.2.4 Examining the effects of soil microbial shifts through microbiome transplant experiments — 73
- 4.3 Analysis of plants and associated microbiomes — 78
 - 4.3.1 Profiling plant-associated microbiomes — 78
 - 4.3.2 Profiling plant phenotypes — 79
- 4.4 Concluding remarks — 82
- References — 82

Don Cowan, Evelien Adriaenssens, Pieter De Maayer, Pedro Lebre,
Thulani Makhwanyane, Jean-Baptiste Ramond, Marla Trindade,
Angel Valverde and Surendra Vikram

5 Metagenomics of extreme environments: methods and applications — 93

- 5.1 Introduction — 93
- 5.2 Metagenomic DNA extraction — 94
 - 5.2.1 Direct mDNA extractions in extreme environments — 94
 - 5.2.2 Indirect mDNA extractions — 97
- 5.3 Microbial diversity analysis: phylogenetics — 97
 - 5.3.1 Upstream analysis — 98
 - 5.3.2 Diversity analysis — 100
 - 5.3.3 Software — 102
- 5.4 Metaviromics — 103
 - 5.4.1 Viral-like particle extraction or enrichment — 103
 - 5.4.2 Nuclease treatment — 104
 - 5.4.3 Nucleic acid extraction and amplification — 104
- 5.5 De novo metagenome assembly (the genome-centric approach) — 104
- 5.6 Exploring the functional ecology of metagenomes — 106
 - 5.6.1 The use of bioinformatics pipelines for predicting functional capacity — 106
 - 5.6.2 Application of gene-based microarrays to functional ecology — 109
- 5.7 Applied (functional) metagenomics — 111
 - 5.7.1 Sample selection — 111
 - 5.7.2 Metagenomic library construction — 112
 - 5.7.3 Expression Hosts — 113
 - 5.7.4 Activity assays — 113
- 5.8 Conclusions and perspectives — 115
 - References — 116

Julien Tremblay

6 Practical overview of bioinformatics data mining in environmental genomics — 127

- 6.1 Introduction — 127
- 6.2 Data types — 129
- 6.3 Experimental design — 129
- 6.4 Short rRNA gene amplicons — 131
- 6.5 Metagenomic shotgun sequencing — 138
- 6.6 Metatranscriptomic shotgun sequencing — 141
- 6.7 Additional notes — 143
 - 6.7.1 Challenges of annotation — 143
 - 6.7.2 Pipeline wrapper — 143
- 6.8 Future directions — 144
 - References — 144

Itumeleng Moroenyane and Étienne Yergeau

7 Techniques and approaches to quantify microbial diversity in extreme environments — 151

7.1 Summary — 151

7.2 Introduction — 151

7.3 Current approaches used to quantify soil microbial diversity in extreme environments — 155

7.3.1 Microbial molecular genetic markers — 155

7.3.2 Measuring local species pools and turnover rates across sites — 156

7.3.3 Measuring functional profiles and microbial interactions — 158

7.3.4 Phylogenetic diversity and inference in extreme soils — 160

7.4 Conclusion — 161

References — 161

Index — 167
