Contents

Introduction 1
D. R. Kelly

Carbon–Carbon Bond Formation, Addition, Elimination and Substitution Reactions

1 Carbon–Carbon Bond Formation Using Enzymes 5
A. D. M. Curtis

2 Lyases 41
D. R. Kelly, J. Mahdi

3 Halocompounds 173
G. Robinson, S. Jackman, J. Stratford

4 Phosphorylation 221
S. Jones

5 Enzymes in Carbohydrate Chemistry: Formation of Glycosidic Linkages 243
S. Flitsch, G. M. Watt

Applications

6 Industrial Biotransformations 277
U. T. Bornscheuer

7 Regioselective Oxidation of Aminosorbitol with *Gluconobacter oxydans*, A Key Reaction in the Industrial Synthesis of 1-Deoxynojirimycin 295
M. Schedel

8 Engineering Microbial Pathways for Amino Acid Production 313
I. Fotheringham

9 Biotechnological Production of Natural Aroma Chemicals by Fermentation Processes 333
J. Rabenhorst

10 Synthetic Applications of Enzyme-Catalyzed Reactions 351
J. McGregor-Jones

The Future of Biotransformations

11 Catalytic Antibodies 403
G. M. Blackburn, A. Garçon

12 Synthetic Enzymes: Artificial Peptides in Stereoselective Synthesis 491
P. Bentley
