Part I Biomimetic Model Systems in Biomineralization 1

1 The Polyamine Silica System: A Biomimetic Model for the Biomineralization of Silica 3

Peter Behrens, Michael Jahns, and Henning Menzel

Abstract 3

1.1 Introduction 3

1.2 Mechanisms of Biomineralization in Diatoms 4

1.3 Polyamine-Silica Systems 6

1.4 Synthesis of Linear Polyamines 9

1.5 Kinetic Investigations on Polyamine-Silica Systems 10

1.6 Investigations of the Aggregation Behavior in Polyamine-Silica Systems 13

1.7 Conclusions 16

References 16

2 Solid-State NMR in Biomimetic Silica Formation and Silica Biomineralization 19

Eike Brunner and Katharina Lutz

Abstract 19

2.1 Introduction 19

2.2 General Remarks on Solid-State NMR Spectroscopy 20

2.3 Multinuclear NMR Studies of Diatom Cell Walls 23

2.3.1 Studies with Solid-State ^{29}Si NMR Spectroscopy 23

2.3.2 Studies of the Embedded Organic Material by NMR Spectroscopy 25

2.4	Silica Precipitation and Self-Assembly of Silaffins and Polyamines	28
2.4.1	Silica Precipitation Activity of Natural Polyamines and Silaffins	28
2.4.2	Self-Assembly of Polyamines: Poly(allylamine) as a Model Compound	30
2.4.2.1	The Dependence of PAA Aggregation on the Phosphate Concentration	31
2.4.2.2	The Dependence of PAA Aggregation on the pH Value	33
2.4.3	Microscopic Phase Separation Mediates Cell Wall Biogenesis	34
2.5	Summary	36
	References	36
3	Mesocrystals: Examples of Non-Classical Crystallization	39
	<i>Helmut Cölfen</i>	
	Abstract	39
3.1	Introduction	39
3.2	Classical and Non-Classical Crystallization	40
3.3	Mesocrystals	42
3.4	Mesocrystal Formation Mechanisms	53
3.5	Conclusions	59
	References	61
4	Biologically Inspired Crystallization of Calcium Carbonate beneath Monolayers: A Critical Overview	65
	<i>Dirk Volkmer</i>	
	Abstract	65
4.1	Introduction	65
4.2	Nacre Formation	66
4.3	Biomimetic Crystallization of CaCO_3 beneath Monolayers: Experimental Set-Up	71
4.4	CaCO_3 Crystallization beneath Monolayers of Macrocylic Amphiphiles	73
4.5	Formation of Tabular Aragonite Crystals via a Non-Epitaxial Growth Mechanism	81
4.6	Conclusions	83
	References	85
5	The Hierarchical Architecture of Nacre and its Mimetic Materials	89
	<i>Hiroaki Imai and Yuya Oaki</i>	
	Abstract	89
5.1	Introduction	89
5.2	The Hierarchical Structures of the Nacreous Layers	91
5.3	Hierarchical Structures of Other Biominerals	93
5.4	Nacre-Mimetic CaCO_3 with Organic Polymers	96

5.4.1	Strategy for the Synthesis of CaCO_3 Planar Films with Soluble Agents and Insoluble Matrices	96
5.4.2	Reproduction of Bridged Nanocrystals with Biogenic Agents	97
5.4.3	Synthesis of Planar Films Consisting of Bridged Nanocrystals with Synthetic Polymeric Agents	98
5.5	Nacre-Mimetic Aragonite-Type Carbonate Crystals with Organic and Inorganic Polymeric Agents	100
5.6	Nacre-Mimetic Hierarchical Structure of Potassium Sulfate and PAA	101
5.7	Self-Organization of Nacre-Mimetic Crystal Growth	102
5.7.1	Bridged Nanocrystals Leading to an Oriented Architecture	102
5.7.2	Formation of Hierarchical Architectures	104
5.8	Conclusions	105
	References	105
6	Avian Eggshell as a Template for Biomimetic Synthesis of New Materials	109
	<i>José Luis Arias, José Ignacio Arias, and María Soledad Fernandez</i>	
	Abstract	109
6.1	Introduction	109
6.2	Eggshell Organization and General Composition	111
6.3	The Eggshell Membrane as an Immobilization Support and Adsorbent	112
6.4	The Eggshell Membrane or Matrix as a Template for Crystal Growth	112
6.5	Composite Reinforcement with Eggshell	114
6.6	Biomedical Applications of Eggshell	114
6.7	Summary and Future Prospects	115
	References	115
7	Biomimetic Mineralization and Shear Modulation Force Microscopy of Self-Assembled Protein Fibers	119
	<i>Elaine DiMasi, Seo-Young Kwak, Nadine Pernodet, Xiaolan Ba, Yizhi Meng, Vladimir Zeitsev, Karthikeyan Subburaman, and Miriam Rafailovich</i>	
	Abstract	119
7.1	Introduction	119
7.2	Self-Assembled ECM Protein Networks	124
7.3	Shear Modulation Force Microscopy	124
7.4	Comparative CaCO_3 Mineralization of Elastin and Fibronectin Networks	126
7.5	Mineralization of ECM Produced by Cells	129
7.6	Outlook	131
	References	132

8 Model Systems for Formation and Dissolution of Calcium Phosphate Minerals 135*Christine A. Orme and Jennifer L. Giocondi*

Abstract 135

- 8.1 Introduction 135
- 8.2 Calcium Phosphate Phases Found in Biology 136
- 8.3 Solution Chemistry in the Body 139
 - 8.3.1 Solution Speciation 139
 - 8.3.2 Crystal Growth Parameters 140
 - 8.3.2.1 Supersaturation 141
 - 8.3.2.2 pH 142
 - 8.3.2.3 Ionic Strength 143
 - 8.3.2.4 Temperature 143
 - 8.3.2.5 Cation to Anion Ratios 143
 - 8.3.3 The Speciation of Body Fluids 144
 - 8.3.4 Limitations of Speciation Modeling 147
- 8.4 Measuring Crystal Growth 148
 - 8.4.1 Bulk Crystallization 148
 - 8.4.2 Scanning Probe/Atomic Force Microscopy 149
- 8.5 Impurity Interactions 151
 - 8.5.1 Inhibition Through Step Pinning 152
 - 8.5.2 Inhibition by Reduction of Step Density 153
- 8.6 Outlook 155

References 156

9 Biomimetic Formation of Magnetite Nanoparticles 159*Damien Faivre*

Abstract 159

- 9.1 The Ubiquitous Interest for Magnetite Nanoparticles 160
- 9.2 Biogenic Magnetite Nanocrystals 160
- 9.3 Biomimetics 164
- 9.4 Abiomimetics 165
- 9.5 Future Considerations 168

References 169

Part II Bio-Inspired Materials Synthesis 173**10 Using Ice to Mimic Nacre: From Structural Applications to Artificial Bone 175***Sylvain Deville, Eduardo Saiz, and Antoni P. Tomsia*

Abstract 175

- 10.1 Nacre as a Blueprint 175
 - 10.1.1 Biomineralized Natural Structures 175

10.1.2	Structure of Nacre	177
10.1.3	Toughening Mechanisms in Nacre	178
10.1.4	Why Mimic Nacre?	179
10.1.5	Currently Available Techniques for Mimicking Nacre	180
10.2	A Natural Segregation Principle	180
10.2.1	Basics of the Technique	181
10.2.2	Previous Achievements	182
10.2.2.1	Ceramics	182
10.2.2.2	Polymers	182
10.2.2.3	Composites	183
10.2.2.4	Hydrogels (Silica)	183
10.2.3	Underlying Physical Principles	183
10.3	Type of Materials Processed and Mechanical Properties	184
10.3.1	Scaffolds and Composites	185
10.3.2	Preliminary Reports of Properties of Ice-Templated Materials	186
10.4	Control of the Structure: Influence of Processing Parameters	188
10.4.1	Mesostructural Gradients	188
10.4.2	Porosity or Relative Importance of the Two Phases	189
10.4.3	Lamellae Characteristics	189
10.4.4	Grain Size	190
10.4.5	Interface	190
10.5	Conclusions	191
	References	192
 11	 Bio-Inspired Construction of Silica Surface Patterns	 193
	<i>Olaf Helmecke, Peter Behrens, and Henning Menzel</i>	
	Abstract	193
11.1	Bioorganic Molecules and their Influence on Silica Condensation	193
11.2	Structure Formation Models	195
11.3	Silica Deposition on Patterned Surfaces	195
11.3.1	Influence of Additives in the Silicic Acid Solution	201
11.3.2	Influence of the Polymer at the Reaction Area	201
11.3.3	Influence of the Polymer at the Reaction Area	203
11.4	Summary	205
	References	206
 12	 Template Surfaces for the Formation of Calcium Carbonate	 209
	<i>Wolfgang Tremel, Jörg Küther, Mathias Balz, Niklas Loges, and Stephan E. Wolf</i>	
	Abstract	209
12.1	Introduction	210
12.2	In-Vitro Models	210
12.3	Control of Polymorphism in Homogeneous Crystallization	211
12.4	Control of Nucleation and Structure Formation Processes at Interfaces: Langmuir Monolayers	212

- 12.5 Control of Nucleation and Structure Formation Processes at Interfaces: Self-Assembled Monolayers 214
- 12.5.1 Surface Polarity 215
- 12.5.2 Surface Ordering 218
- 12.5.3 Surface Geometry/Symmetry 220
- 12.5.4 Head Group Orientation Due to Even/Odd Chains 224
- 12.6 Mechanistic Studies of the Crystallization on SAMs 225
- 12.7 Studies of Cooperative Interactions in Template-Induced Crystallization Processes 226
- 12.7.1 Mineralization of CaCO_3 on SAMs in the Presence of Polyacrylate 226
- References 229

Part III Bio-Supported Materials Chemistry 233

- 13 Inorganic Preforms of Biological Origin: Shape-Preserving Reactive Conversion of Biosilica Microshells (Diatoms) 235
Kenneth H. Sandhage, Shawn M. Allan, Matthew B. Dickerson, Eric M. Ernst, Christopher S. Gaddis, Samuel Shian, Michael R. Weatherspoon, Gul Ahmad, Ye Cai, Michael S. Haluska, Robert L. Snyder, Raymond R. Unocic, and Frank M. Zalar
 Abstract 235
- 13.1 Attractive Characteristics and Limitations of Biological Self-Assembly 236
- 13.2 The Bioclastic and Shape-Preserving Inorganic Conversion (BaSIC) Process 236
- 13.3 Shape-Preserving Reactive Conversion of 3-D Synthetic Ceramic Macrostructures 237
- 13.4 Shape-Preserving Chemical Conversion of Diatom Frustules via Oxidation-Reduction Reactions 239
- 13.5 Shape-Preserving Chemical Conversion of Diatom Frustules via Metathetic Reactions 243
- 13.6 Shape-Preserving Chemical Conversion of Diatom Frustules via Sequential Displacement Reactions 247
- 13.7 Summary and Future Opportunities 249
 References 251
- 14 Organic Preforms of Biological Origin: Natural Plant Tissues as Templates for Inorganic and Zeolitic Macrostructures 255
Alessandro Zampieri, Wilhelm Schwieger, Cordt Zollfrank, and Peter Greil
 Abstract 255
- 14.1 Introduction 256
- 14.1.1 The Direct Replica 257
- 14.1.2 The Sacrificial Template-Type Replica 257

14.1.3	Cellular Ceramics	258
14.1.3.1	Polysaccharides	258
14.2	Conversion of Lignocellulosics into Ceramic Substrate	261
14.3	Hierarchical Porous Zeolite-Containing Macrostructures	266
14.3.1	Replicating Materials of Biological Origin	269
14.3.2	Zeolite Functionalization of Biomorphous Cellular Ceramics	277
14.4	Conclusion	286
	References	286

15 "Bio-Casting": Biom mineralized Skeletons as Templates for Macroporous Structures 289

Fiona Meldrum

Abstract 289

15.1	Introduction	289
15.2	Amorphous and Polycrystalline Macroporous Solids	293
15.2.1	Polymer Replicas of Sea Urchin Skeletal Plates	293
15.2.2	Macroporous Gold	294
15.2.3	Macroporous Nickel	295
15.2.4	Macroporous Silica	295
15.2.5	Macroporous Titania	297
15.3	Macroporous Single Crystals	297
15.3.1	Calcium Carbonate	298
15.3.2	Strontium Sulfate	300
15.3.3	Lead Sulfate and Lead Carbonate	301
15.3.4	Copper Sulfate and Sodium Chloride	302
15.3.5	Polycrystalline Systems	303
15.3.6	Controlling Crystal Nucleation: Influence of the Polymer Surface Chemistry	304
15.4	Summary	306
	References	307

Part IV Protein Cages as Size-Constrained Reaction Vessels 311

16 Constrained Metal Oxide Mineralization: Lessons from Ferritin Applied to other Protein Cage Architectures 313

Mark A. Allen, M. Matthew Prissel, Mark J. Young, and Trevor Douglas

Abstract 313

16.1	Introduction	313
16.2	Biom mineralization of Iron Oxide in Mammalian Ferritin	316
16.3	Mineralization	317
16.4	Iron oxidation	319
16.5	Iron Oxide Nucleation and Mineral Growth	320
16.6	Summary of Ferritin Mineralization Reaction	321
16.7	Model for Synthetic Nucleation-Driven Mineralization	322

16.8	Mineralization in Dps: A 12-Subunit Protein Cage	324
16.9	Icosahedral Protein Cages: Viruses	326
16.10	Cowpea Chlorotic Mottle Virus: A Model Protein Cage	327
16.11	Redesigning CCMV to Make a Fn Mimic	328
16.12	Conclusions	330
	References	331
17	The Tobacco Mosaic Virus as Template	335
