List of Contributors XXI

Part I Bone 1

1 Mineralization of Bone: An Active or Passive Process? 3

Thorsten Schinke and Michael Amling

Abstract 3

1.1 Physiological and Pathological Mineralization 3

1.2 Inhibitors of Pathological Mineralization 5

1.3 Activators of Physiological Mineralization 6

1.4 The Key Role of Pyrophosphate 9

1.5 The Mysterious Role of the Endopeptidase Phex 11

1.6 Concluding Remarks 13

References 14

2 Bone Morphogenetic Proteins 19

Walter Sebold, Joachim Nickel, Axel Seher, and Thomas D. Müller

Abstract 19

2.1 Introduction 19

2.2 What is a Bone Morphogenetic Protein? 21

2.3 BMP Receptors are Composed of Diverse Type I and Type II Receptor Chains 23

2.4 The Basic Signaling Mechanism is the Same for BMPs and other TGF- β -like Proteins 24

2.5 Biochemistry and Cell Biology of Receptor Specificity 25

2.6 Structural Basis for Specificity and Affinity of BMP Receptor Interaction 27

2.7	What We Can Do with BMPs: The Engineering of BMP-2 and GDF-5	
	Variants	29
	References	32
3	Biomechanics of Bones: Modeling and Computation of Bone	
	Remodeling	35
	Udo Nackenhorst	
	Abstract	35
3.1	Introduction	35
3.2	The Biomechanical Equilibrium Approach	36
3.3	A Computational Multi-Scale Approach for Cortical Bone	42
3.3.1	Closed Nano-to-Meso Control Circuit Approach	43
3.3.2	Sub-Cellular Length-Scale	44
3.3.3	Micro-Scale Model (Single Osteon)	45
3.3.4	Meso-Scale Model of Cortical Bone	45
3.4	Conclusions	46
	References	47
4	Direct X-Ray Scattering Measurement of Internal Stresses and Strains in Loaded Bones	49
	Stuart R. Stock and Jonathan D. Almer	
	Abstract	49
4.1	Introduction	49
4.2	Background	50
4.2.1	X-Ray Scattering	50
4.2.2	Strains and Stresses	51
4.3	Methods	51
4.3.1	Specimens and Geometry	51
4.3.2	Analysis of Two-Dimensional (2-D) Scattering Patterns	53
4.3.3	X-Ray Elastic Constants and Strain-Stress Conversion	55
4.4	Examples of Data and Analysis	55
4.5	Discussion and Future Directions	56
	References	57
5	Osteoporosis and Osteopetrosis	59
	Adele L. Boskey	
	Abstract	59
5.1	Introduction: Two Distinct Diseases with Common Features	59
5.1.1	Comparisons of Clinical Features of Osteoporosis and Osteopetrosis	60
5.1.1.1	Histology	60
5.1.1.2	Radiography	61

5.1.2	Comparisons of Bone Mineral Properties in Osteoporosis and Osteopetrosis	62
5.2	Animal Models of Osteoporosis and Osteopetrosis	63
5.2.1	Osteoporosis	63
5.2.1.1	Rodent Models	63
5.2.1.2	Non-Rodent Models	66
5.2.2	Osteopetrosis	66
5.2.2.1	Rodent Models	67
5.2.2.2	Other Osteopetrotic Models	68
5.3	The Cellular and Molecular Bases of Osteoporosis and Osteopetrosis	70
5.3.1	Osteoporosis	70
5.3.2	Osteopetrosis	72
5.4	Biominingalization in Osteopetrosis and Osteoporosis	74
	References	75
6	Biomimetic Bone Substitution Materials	81
	<i>Matthias Epple</i>	
	Abstract	81
6.1	The Clinical Need for Bone Substitution Materials	81
6.2	Synthetic Materials Used for Bone Substitution	82
6.3	Ceramics and Bone Cements	84
6.4	Polymers	86
6.4.1	PMMA-Based Materials	86
6.4.2	Polyester-Based Materials	86
6.5	Metals	87
6.6	Composites	87
6.7	Bone Substitutes of Biological Origin	87
6.8	Biological Functionalization of Synthetic Materials	90
6.9	An Example of a Synthetic Biomimetic Bone Substitution Material	90
6.10	Conclusions and Future Developments	91
	References	92
7	Simulated Body Fluid (SBF) as a Standard Tool to Test the Bioactivity of Implants	97
	<i>Tadashi Kokubo and Hiroaki Takadama</i>	
	Abstract	97
7.1	Introduction	97
7.2	Qualitative Correlation of Bone-Bonding Bioactivity of a Material with Apatite Formation on its Surface in SBF	98
7.3	Quantitative Correlation of Bone-Bonding Bioactivity and Apatite-Forming Ability in SBF	100
7.4	Ion Concentrations of SBF	101

7.5	Materials Able to Form Apatite	102
7.6	Composition and Structure of Apatite	103
7.7	Mechanism of Bonding of Bioactive Material to Bone	104
7.8	Mechanisms of Apatite Formation	105
7.9	Summary	106
	References	106
8	Stimulation of Bone Growth on Implants by Integrin Ligands	109
	<i>Mónica López-García and Horst Kessler</i>	
	Abstract	109
8.1	Introduction	109
8.1.1	Biomimetic Materials for Implant Technology	109
8.1.2	Integrins and RGD Sequence	110
8.1.3	Natural Proteins or Synthetic Peptides as Cell-Adhesive Molecules?	111
8.1.4	Integrin-Mediated Cell Adhesion	112
8.2	Improvements in Implant-Osseointegration by Surface Modification with Integrin Ligands	115
8.2.1	Mechanisms of Bone Grafting	115
8.2.2	Modifications on Implant Surfaces to Improve its Osseointegration	116
8.2.3	Structure of the Coating Molecules	117
8.2.4	Stimulation of Osteoblasts Adhesion and Proliferation on Implants Promoted by Integrin Ligands	118
8.2.4.1	Poly(methyl methacrylate)	118
8.2.4.2	Silks	120
8.2.4.3	Titanium	120
8.2.4.4	RGD Mimetics	121
8.3	Conclusions	123
	References	123
9	Biochemical and Pathological Responses of Cells and Tissue to Micro- and Nanoparticles from Titanium and other Materials	127
	<i>Fumio Watari, Kazuchika Tamura, Atsuro Yokoyama, Kenichiro Shibata, Tsukasa Akasaka, Bunshi Fugetsu, Kiyotaka Asakura, Motohiro Uo, Yasunori Totsuka, Yoshinori Sato, and Kazuyuki Tohji</i>	
	Abstract	127
9.1	Introduction	128
9.2	Materials and Methods	128
9.2.1	Specimens	128
9.2.2	Dissolution Testing of Ti Particles	129
9.2.3	Probe Cells	129
9.2.4	Biochemical Analyses of Cellular Reactions to Materials	129
9.2.5	Animal Experiments	129

9.3	Results	130
9.3.1	Dependence of Tissue Reaction <i>In Vivo</i> on Material Macroscopic Size	130
9.3.2	Effect of Particle Size on Biocompatibility	130
9.3.2.1	Size Distribution of the Abraded Particles	130
9.3.2.2	Particle Size Dependence <i>In Vitro</i>	131
9.3.2.3	Particle Size Dependence <i>In Vivo</i>	133
9.3.2.4	Material Dependence of the Particle Size Effect <i>In Vitro</i>	135
9.3.2.5	Material Dependency of Tissue Reaction to Particles <i>In Vivo</i>	135
9.3.3	Shape Effect	136
9.3.4	The Origin of the Particle Size Effect	137
9.3.5	Toxicity Level of Particle Size Effect for Bioactive and Bioinert Materials	138
9.3.6	Nanotoxicology	139
9.3.6.1	Size-Dependent Stimulus Down to Nanometer Size	139
9.3.6.2	Internal Diffusion of Nanoparticles	139
9.3.6.3	Toxicity-Enhancing Effects of Biostimulatory Materials by Nanosizing	140
9.4	Discussion	140
9.4.1	Particle Size-Dependence of Cytotoxicity	140
9.4.2	Particle Size-Dependence in Soft Tissues	141
9.4.3	Comparison of Ti, Fe, and Ni Particles	141
9.4.4	The Effect of Micro-/Nanosizing on Biological Reactions	142
9.4.5	Terminology on "Nanotoxicology"	143
	References	143
10	Tissue Engineering of Bone	145
	<i>Hans-Peter Wiesmann, Beate Lüttenberg, and Ulrich Meyer</i>	
	Abstract	145
10.1	Tissue Engineering: What Does it Mean?	145
10.2	Components of Bone Tissue Engineering	147
10.2.1	Osteoblasts	147
10.2.2	Bone Marrow Cells	148
10.2.3	Marrow-Derived Stem Cells	148
10.2.4	Vascular Cells	149
10.2.5	Scaffold Design and Cell Compatibility	149
10.2.6	Bioreactors	150
10.2.7	<i>In-Vitro</i> Cell Stimulation	150
10.2.7.1	Biophysical Stimulation	150
10.2.7.2	Biochemical Stimulation	151
10.3	Bone Biomineralization in Tissue Engineering <i>Ex Vivo</i> and <i>In Vivo</i>	151
10.3.1	Principles of ECM Biomineralization	151
10.3.2	Principles of Bone Formation	152

- 10.3.3 Particular Features of Extracorporeal Biomineralization 153
- 10.4 Clinical Demands 153
- 10.5 Future Aspects 154
- References 155

Part II Teeth 157

11 Formation of Teeth 159

Katharina Reichenmiller and Christian Klein

Abstract 159

- 11.1 Introduction 159
- 11.2 Odontogenesis 163
 - 11.2.1 Genes Involved in Odontogenesis 165
 - 11.2.2 Stem Cells 165
- 11.3 Dentinogenesis 165
 - 11.3.1 Mantle and Circumpulpal Dentin 166
 - 11.3.2 Intertubular Dentin 168
 - 11.3.3 Peritubular Dentin 168
- 11.4 Amelogenesis 170
- 11.5 Cementogenesis 172
 - 11.5.1 Acellular Extrinsic Fiber Cementum (AEFC) 172
 - 11.5.2 Cellular Intrinsic Fiber Cementum (CIFC) 173
 - 11.5.3 Cellular Mixed Stratified Cementum (CMSC) 174
 - 11.5.4 Acellular Intrinsic Fiber Cementum (AIFC) 174
- 11.6 Acknowledgments 174
- References 174

12 The Structure of Teeth: Human Enamel Crystal Structure 177

Frédéric Cuisinier and Colin Robinson

Abstract 177

- 12.1 Introduction 177
- 12.2 HRTEM Observations 178
- 12.3 AFM Observations 179
- 12.4 Discussion 181
- 12.5 Conclusions 182
- References 182

13 Design Strategies of Human Teeth: Biomechanical Adaptations 183

Paul Zaslansky and Steve Weiner

Abstract 183

- 13.1 Introduction 183
- 13.2 Deformation of Whole Teeth under Load 185

13.3	Mechanical Behavior of the Enamel Cap	191
13.4	The Role of Crown Dentin During Load Bearing	194
13.5	The Role of the Root and Supporting Structures	196
13.6	Broader Implications and Conclusions	198
	<i>References</i>	200
14	Clinical Aspects of Tooth Diseases and their Treatment	203
	<i>Peter Gängler and Wolfgang H. Arnold</i>	
	<i>Abstract</i>	203
14.1	Introduction	203
14.2	Tooth Development and Developmental Anomalies	206
14.2.1	Developmental Features and Elemental Analysis of Early Mineralization	207
14.2.2	Developmental Anomalies	210
14.3	Dental Caries	212
14.4	Periodontal Diseases	216
14.5	Dental Trauma	220
14.5.1	Acute Dental Trauma	220
14.5.2	Chronic Dental Trauma	220
	<i>References</i>	221
15	Dental Caries: Quantifying Mineral Changes	223
	<i>Susan M. Higham and Philip W. Smith</i>	
	<i>Abstract</i>	223
15.1	Introduction	223
15.2	Enamel Caries	224
15.3	Dentine Caries	224
15.4	Analyzing Mineral Changes in Dental Caries	225
15.4.1	Transverse Microradiography	226
15.4.2	TMR Studies	227
15.5	Quantitative Light-Induced Fluorescence	229
15.5.1	<i>In Vitro</i> QLF Studies	231
15.5.2	<i>In Vivo</i> QLF Studies	234

16	Periodontal Regeneration	239
	<i>Horn-Lay Wang and Lakshmi Boyapati</i>	
	<i>Abstract</i>	239
16.1	Definitions	239
16.2	Periodontal Wound Healing	240
16.2.1	Wound-Healing Principles	240
16.2.2	Compartmentalization	241

16.2.3	Evaluating Regeneration	241
16.3	Techniques Used for Regeneration	241
16.3.1	Root Surface Biomodification	241
16.3.1.1	Root Surface Conditioning	241
16.3.2	Bone Replacement Grafts	242
16.3.2.1	Autografts	243
16.3.2.2	Allografts	243
16.3.2.3	Xenografts	245
16.3.2.4	Alloplasts	245
16.3.3	Guided Tissue Regeneration	246
16.3.3.1	Non-Absorbable Membranes	246
16.3.3.2	Absorbable Membranes	246
16.3.4	Biologic Modifiers	248
16.3.4.1	Growth Factors/Cytokines	248
16.3.4.2	Bone Morphogenetic Proteins (BMPs)	248
16.3.4.3	Pep-Gen p-15	249
16.3.4.4	Enamel Matrix Derivative (EMD)	249
16.4	Factors Influencing GTR Success	249
16.4.1	Patient Factors	251
16.4.2	Defect/Local Factors	251
16.4.3	Treatment Factors	252
16.4.4	Postoperative Care	252
16.5	Surgical Principles	253
16.5.1	Furcation Defects	253
16.5.2	Intrabony Defects	253
16.5.3	Root Coverage	253
16.5.4	Surgical Techniques	255
16.6	Conclusions	258
	References	258
