Preface	ix
Nomenclature	xi
Epsilon Software Information	xxi
Acknowledgement	xxv
1 Facts and Figures in Enzyme Biocatalysis	1
1.1 Introduction	1
1.1.1 Enzyme Properties	1
1.1.2 Enzyme Applications	2
1.2 Enzymes as Process Catalysts	3
1.3 Evolution of Enzyme Biocatalysis: From Hydrolysis to Synthesis	5
1.4 The Enzyme Market: Figures and Outlook	6
References	7
2 Enzyme Kinetics in a Homogeneous System	11
2.1 Introduction	11
2.1.1 Concept and Determination of Enzyme Activity	11
2.1.2 Definition of a Unit of Activity	13
2.1.3 Measurement of Enzyme Activity	13
2.2 Theory of Enzyme Kinetics	14
2.3 Single-Substrate Reactions	17
2.3.1 Kinetics of Enzyme Inhibition	18
2.4 Multiple-Substrate Reactions	19
2.4.1 Reaction Mechanisms	19
2.4.2 Kinetics of Enzyme Reactions with Two Substrates	20
2.5 Multiple-Enzyme Reactions	21
2.6 Determination of Kinetic Parameters	22
2.7 Effects of Operational Variables on Enzyme Kinetics	24
2.7.1 Effects of pH	25
2.7.2 Effects of Temperature	26
Solved Problems	29
Supplementary Problems	72
References	84
3 Enzyme Kinetics in a Heterogeneous System	87
3.1 Introduction	87

3.2	Immobilization of Enzymes	87
3.2.1	Immobilization on Solid Supports (Carrier-Bound Systems)	88
3.2.2	Immobilization by Containment	89
3.2.3	Immobilization in Carrier-Free Systems	89
3.2.4	Parameters of Enzyme Immobilization	90
3.2.5	Optimization of Enzyme Immobilization	91
3.3	Mass-Transfer Limitations in Enzyme Catalysis	92
3.3.1	Partition Effects	93
3.3.2	External Diffusional Restrictions in Impervious Biocatalysts	94
3.3.3	Internal Diffusional Restrictions in Porous Biocatalysts	97
3.4	Determination of Intrinsic Kinetic and Mass-Transfer Parameters	102
3.4.1	EDR	102
3.4.2	IDR	104
	Solved Problems	105
	Supplementary Problems	127
	References	138
4	Enzyme Reactor Design and Operation under Ideal Conditions	141
4.1	Modes of Operation and Reactor Configurations	141
4.2	Definition of Ideal Conditions	142
4.3	Strategy for Reactor Design and Performance Evaluation	143
4.4	Mathematical Models for Enzyme Kinetics, Modes of Operation, and Reactor Configurations under Ideal Conditions	143
4.4.1	Batch Enzyme Reactor	144
4.4.2	Continuous Enzyme Reactors	148
	Solved Problems	157
	Supplementary Problems	174
	References	179
5	Enzyme Reactor Design and Operation under Mass-Transfer Limitations	181
5.1	Sequential Batch and Continuously Operated Reactors with Immobilized Enzymes	182
5.2	Mathematical Models for Enzyme Kinetics, Modes of Operation, and Reactor Configurations under Mass-Transfer Limitations	183
	Solved Problems	185
	Supplementary Problems	198
6	Enzyme Reactor Design and Operation under Biocatalyst Inactivation	203
6.1	Mechanistically Based Mathematical Models of Enzyme Inactivation	203
6.2	Effect of Catalytic Modulators on Enzyme Inactivation	205
6.3	Mathematical Models for Different Enzyme Kinetics, Modes of Operation, and Reactor Configurations under Biocatalyst Inactivation	206
6.3.1	Nonmodulated Enzyme Inactivation	206
6.3.2	Modulated Enzyme Inactivation	209

6.4 Mathematical Models for Enzyme Kinetics, Modes of Operation, and Reactor Configurations under Simultaneous Mass-Transfer Limitations and Enzyme Inactivation	212
6.5 Strategies for Reactor Operation under Biocatalyst Inactivation	213
Solved Problems	215
Supplementary Problems	233
References	240
7 Optimization of Enzyme Reactor Operation	243
7.1 Strategy for the Optimization of Enzyme Reactor Performance	244
7.1.1 Objective Function	244
7.1.2 Variables for Optimization of Enzyme Reactor Performance	246
7.1.3 Determination of Optimum Temperature	247
7.2 Mathematical Programming for Static Optimization	247
7.3 Dynamic Programming	248
7.4 Statistical Optimization by Surface Response Methodology	249
7.4.1 Assessing the Quality of SRM and its Parameters	251
7.4.2 Process Optimization by SRM	252
Solved Problems	254
Supplementary Problems	272
References	275
Appendix A Mathematical Methods	277
A.1. Newton's Method	277
A.2. Curve Fitting by Least Squares	280
A.2.1 Linear Regression	280
A.2.2 Nonlinear Regression	286
A.3. Solving Ordinary Differential Equations	296
A.3.1 Solving First-Order Ordinary Differential Equations by the Separation of Variables	296
A.3.2 Solving First-Order Ordinary Differential Equations Using an Integration Factor	297
A.3.3 Solving Second- and Higher-Order Linear Homogeneous Differential Equations with Constant Coefficients Using their Characteristic Equations	298
A.3.4 Solving Second- and Higher-Order Linear Homogeneous Differential Equations with Variable Coefficients	301
A.4. Numerical Methods for Solving Differential Equations	302
A.4.1 The Euler Method	302
A.4.2 The Fourth-Order Runge-Kutta Method	303
A.4.3 The Finite-Difference Method	303
References	310
Index	311
