Foreword XI

Preface XIII

List of Contributors XV

Introduction 1

Enno Brinckmann

(with contributions from René Demets and Wolfgang Herfs)

- 1 Flight Mission Scenarios 1
- 2 Sounding Rocket Experiments 4
- 3 Biobox on Foton and in the Space Shuttle 6
 - 3.1 Biobox-1 7
 - 3.2 Biobox-2 8
 - 3.3 Biobox-3 8
 - 3.4 Biobox-4 9
- 4 Biorack in Spacelab and Spacehab 9

1 The Gravity Environment in Space Experiments 17

Jack J. W. A. van Loon

- 1.1 Introduction to Gravity Research 17
 - 1.1.1 Principle of Equivalence 18
 - 1.1.2 Microgravity 19
 - 1.1.3 Artificial Gravity 21
- 1.2 Gravity Phenomena on Small Objects 24
 - 1.2.1 Sedimentation 24
 - 1.2.2 Hydrostatic Pressure 25
 - 1.2.3 Diffusion 26
 - 1.2.4 Convection 27
 - 1.2.5 Diffusion/Convection 27
 - 1.2.6 Buoyancy 28
 - 1.2.7 Coriolis Acceleration 30

2	Primary Responses of Gravity Sensing in Plants	33
	<i>Markus Braun</i>	
2.1	Introduction and Historical Background	33
2.2	Evolution of Gravity Sensing Mechanisms under the Earth's Gravity Conditions	35
2.3	Specific Location and Unique Features of Gravity Sensing Cells	36
2.4	Correlation between Statolith Sedimentation and Gravitropic Responses	37
2.5	Is the Actin Cytoskeleton Involved in Gravity Sensing?	39
2.6	Gravireceptors	41
2.7	Second Messengers in Gravisignalling	44
2.8	Modifying Gravitational Acceleration Forces – Versatile Tools for Studying Plant Gravity Sensing Mechanisms	45
2.9	Conclusions and Perspectives	48
3	Physiological Responses of Higher Plants	53
	<i>Dieter Volkmann and František Baluška</i>	
3.1	Introduction: Historical Overview	53
3.2	Terminological Aspects	54
3.3	Microgravity as a Tool	55
3.3.1	Equipment	55
3.3.2	Testable Hypotheses	55
3.3.2.1	Gravisensitivity	56
3.3.2.2	Stimulus Transformation: Role of the Actomyosin System	56
3.3.2.3	Extracellular Matrix as Anti-gravitational Material	57
3.3.2.4	Existence of Gravity (Microgravity) Related Genes	58
3.3.2.5	Autonomous versus Directed Movements	58
3.4	Microgravity as Stress Factor	59
3.4.1	Cellular Level	59
3.4.2	Developmental Aspects	60
3.5	Gravity-related Paradoxes	61
3.6	Gravity and Evolution	63
3.7	Conclusion and Perspectives	65
4	Development and Gravitropism of Lentil Seedling Roots Grown in Microgravity	71
	<i>Gérald Perbal and Dominique Driss-École</i>	
4.1	Introduction	71
4.1.1	Development of Lentil Seedlings on the Ground	72
4.1.1.1	Functional Zones of the Primary Root	72
4.1.1.2	Role of the Root Cap	72
4.1.1.3	Meristematic Activity	73
4.1.1.4	Cell Elongation	74
4.1.2	Root Gravitropism on Earth	75
4.1.2.1	Perception of Gravity	75

4.1.2.2	The Root Statocyte	77
4.1.2.3	Gravisensitivity: The Presentation Time	78
4.1.2.4	Gravitropic Reaction	80
4.2	Basic Hardware Used to Perform Space Experiments	82
4.2.1	Plant Growth Chambers: The Minicontainers	82
4.2.1.1	Seed Set-up	83
4.2.1.2	Hydration of the Seeds	84
4.2.2	The Glutaraldehyde Fixer	84
4.3	Development in Space	85
4.3.1	Root Orientation in Microgravity	85
4.3.2	Root Growth	88
4.3.3	Cell Elongation	89
4.3.4	Meristematic Activity	89
4.3.4.1	Mitotic Activity	89
4.3.4.2	Cell Cycle	92
4.4	Root Gravitropism in Space	93
4.4.1	Organelle Distribution within the Statocyte	93
4.4.1.1	Statocyte Polarity	93
4.4.1.2	Positioning of the Nucleus and of the Endoplasmic Reticulum	94
4.4.1.3	Amyloplasts Positioning	96
4.4.2	Gravisensitivity	99
4.4.2.1	Presentation Time	99
4.4.2.2	Models for Dose-Response Curves	104
4.4.2.3	Difference in Gravisensitivity	105
4.4.2.4	Cause of the Difference in Gravisensitivity	107
4.4.2.5	Model of Gravisensing	108
4.4.3	Gravitropic Response	111
4.4.3.1	Absence of Counter-reaction	111
4.4.3.2	Comparison with the Effect of Cytochalasin Treatments	112
4.5	Conclusion	113
4.5.1	Action of Microgravity on Root Growth	113
4.5.2	Gravisensing Cells and Perception of Gravity by Roots	115
4.5.2.1	Statocyte Polarity and Movement of Organelles	115
4.5.2.2	Gravisensing	116
5	Biology of Adherent Cells in Microgravity	123
	<i>Charles A. Lambert, Charles M. Lapière, and Betty V. Nusgens</i>	
5.1	Why Cell Biology Research in Microgravity?	123
5.2	Medical Disturbances in Astronauts	124
5.2.1	Similarity to Diseases on Earth	124
5.2.2	Cell Types Potentially Involved	125
5.3	Mechano-receptivity and -reactivity of Adherent Cells in Culture	126
5.3.1	Mechano-transduction at the Cell-Matrix Contacts	127
5.3.2	Mechano-transduction at the Cell-Cell Contacts	129

- 5.3.3 The Cytoskeleton Network and its Control by the Small RhoGTPases 129
- 5.3.4 Cells React to Mechanical Stress and Relaxation 132
- 5.4 Microgravity, the Loss of a Force, Leading to Cellular Disturbances 133
 - 5.4.1 Biological View of the Biophysical Concepts 133
 - 5.4.2 Short Time Microgravity and Space Flights 134
 - 5.4.3 Modelled Altered Gravity 140
 - 5.4.3.1 Averaging the g-Vector 140
 - 5.4.3.2 Free-fall Simulation 145
 - 5.4.3.3 Diamagnetic Levitation 146
 - 5.4.3.4 Hypergravity 146
- 5.5 From Ground Research to Investigations in Microgravity 146
 - 5.5.1 Testable Hypotheses 147
 - 5.5.2 Experimental Strategy and Constraints 147
 - 5.5.3 The Future 148
- 6 Microgravity and Bone Cell Mechanosensitivity 157**
Rommel G. Bacabac, Jack J. W. A. van Loon, and Jenneke Klein-Nulend
 - 6.1 Overview 157
 - 6.2 Introduction 157
 - 6.3 Mechanotransduction in Bone 162
 - 6.4 Signal Transduction in Mechanosensing 162
 - 6.5 Single Cell Response to Mechanical Loading 163
 - 6.6 Rate-dependent Response by Bone Cells 164
 - 6.7 Implications of Threshold Activation: Enhanced Response to Stochastic Stress 167
 - 6.8 Stress Response and Cellular Deformation 168
 - 6.9 Towards a Quantitative Description of Bone Cell Mechanosensitivity 169
 - 6.10 Implications for the Extreme Condition of Unloading Microgravity 172
- 7 Bone Cell Biology in Microgravity 179**
Geert Carmeliet, Lieve Coenegrachts, and Roger Bouillon
 - 7.1 Overview 179
 - 7.2 Introduction 179
 - 7.3 Bone Remodelling: An Equilibrium between Osteoblasts and Osteoclasts 180
 - 7.4 Human Studies: Response of Bone to Space Flight 181
 - 7.5 Space Flight and Unloading in the Rat Mimics Human Bone Loss 182
 - 7.6 Mechanisms of Decreased Bone Formation Induced by Unloading or Space Flight 182

7.7	Are Osteoblastic Cells <i>In Vitro</i> Responding to Altered Gravity Conditions? 184
7.7.1	Proliferation and Apoptosis 184
7.7.2	Differentiation: Matrix Production 185
7.7.3	Differentiation: Growth Factors 186
7.8	Potential Mechanisms of Altered Osteoblastic Behaviour 186
7.9	Conclusion 188
8	Cells of the Immune System in Space (Lymphocytes) 193
	<i>Augusto Cogoli and Marianne Cogoli-Greuter</i>
8.1	Introduction 193
8.2	Activation of T Cells 195
8.3	Earliest Data 196
8.4	Spacelab-1, 1983 197
8.5	Spacelab D-1, 1985 197
8.6	Stratospheric Balloon, 1986 200
8.7	Sounding Rockets Maser 3, 1989, and Maser 4, 1990 200
8.8	Spacelab Life Sciences SLS-1, 1991 201
8.9	Russian MIR Station, Missions 7, 8, 9, 1988–1990 203
8.10	Spacelab IML-1, 1992 204
8.11	Sounding Rockets Maxus 1B, 1992, and Maxus 2, 1995 205
8.12	Spacelab IML-2, 1994 209
8.13	Sounding Rocket Maser 9, 2002 211
8.14	Shuttle Flight STS-107, Biopack, 2003 212
8.15	Ground Simulations 212
8.15.1	Marathon Run and Head-down Tilt Test 213
8.15.2	Clinostats 214
8.16	Conclusion 219
9	Evaluation of Environmental Radiation Effects at the Single Cell Level in Space and on Earth 223
	<i>Patrick Van Oostveldt, Geert Meesen, Philippe Baert, and André Poffijn</i>
9.1	Introduction 223
9.2	The Space Radiation Environment 224
9.3	HZE Track Detection 225
9.3.1	Confocal Scanning Laser Microscopy for Track Analysis in PADC 226
9.3.2	Time-resolved Track Detection 227
9.4	Results of the RAMIROS Experiment on board of the Soyuz Taxi Flight to the ISS 229
9.4.1	Methods 229
9.4.2	Results and Discussion 230
9.4.2.1	Retrieval of Cell Cultures 230
9.4.2.2	Number of HZE Tracks 230
9.4.2.3	Correlation between HZE Hit and DNA Damage at Single Cell Level 231

9.4.2.4	Space versus Ground Samples	234
9.4.2.5	HZE Hits Before and After Fixation	235
9.4.2.6	Conclusions	235
9.5	Combination of Radiation with other Biological Stress in Space Travel	236
9.6	Interactions between Radiation and Gravity	237
9.7	General Conclusions and Perspectives	239
10	Space Radiation Biology	243
	<i>Gerda Horneck</i>	
10.1	Radiation Scenario in Space	243
10.1.1	Cosmic Ionizing Radiation	244
10.1.2	Solar Electromagnetic Radiation	247
10.2	Questions Tackled in Space Radiation Biology	248
10.3	Results of Radiobiological Experiments in Space	250
10.3.1	Life and Cosmic Radiation	250
10.3.1.1	Radiation Dosimetry	250
10.3.1.2	Biological Effects of Cosmic Radiation	254
10.3.1.3	Interaction of Radiation with other Space Flight Factors	259
10.3.1.4	Radiation Protection Guidelines for Astronauts in LEO	262
10.3.2	Life and Solar Electromagnetic Radiation	263
10.3.2.1	Biological effects of Extraterrestrial Solar UV Radiation	264
10.3.2.2	Role of Solar UV Radiation in Evolutionary Processes Related to Life	266
10.4	Outlook: Radiation Biology and Future Exploratory Missions in the Solar System	268
10.4.1	Habitability of Mars	268
10.4.2	Radiation Protection Guidelines for Astronauts during Exploratory Missions	269
