1 Gender and Sexual Dimorphism in Flowering Plants:

A Review of Terminology, Biogeographic patterns, Ecological Correlates, and Phylogenetic Approaches

Ann K. Sakai and Stephan G. Weller	1
1.1 Introduction	1
1.2 Terminology	1
1.3 Incidence of Dioecy	10
1.3.1 Overview	10
1.3.2 Ecological Associations	14
1.3.3 Geographic Patterns	15
1.4 Importance of Phylogenetic Approaches	18
1.5 Using Phylogenies to Understand Process and Pattern	19
1.5.1 Phylogenetic Distributions	19
1.5.2 Self-Incompatibility and Dioecy	20
1.5.3 Dioecy and Fleshy Fruits	21
1.5.4 Habitat Shifts, Pollination Biology, and Changes in Outcrossing Rates	22
1.6 Conclusions	24
References	25

2 Theories of the Evolution of Dioecy

Deborah Charlesworth	33
2.1 Introduction	33
2.2 Importance of Theoretical Models	34
2.3 Pathways to Dioecy	36
2.4 Theoretical Relationships Between Allocation of Reproductive Resources and Invasion of Populations by New Sex Morphs	37
2.4.1 Fitness in Outcrossing and Partially Selfing Cosexes and Allocation in Cosexes	37
2.4.2 Invasion of Populations by Females and Males	38
2.4.3 Effect of Cosex Allocations on Invasion by Unisexuals or Partially Sterile Types	43
2.4.4 Effects of Unisexuals on Cosex Allocations	45
2.4.5 Other Possible Routes to Dioecy	49

2.5	Testing the Theory.....	51
2.5.1	Comparative Tests	51
2.5.2	Gain Curves.....	52
2.5.3	Intraspecific Data	52
2.5.4	Genetic Data.....	55
2.6	Conclusions	55
2.7	References	56
 3 Empirical Studies: Evolution and Maintenance of Dimorphic Breeding Systems		
	Colin J. Webb.....	61
3.1	Introduction	61
3.2	Evolutionary Pathways to Gender Dimorphism.....	62
3.2.1	Approaches to the Study of Gender.....	62
3.2.1.1	Quantitative Description of Plant Gender	62
3.2.1.2	Theoretical Modelling.....	63
3.2.1.3	Phylogenetic Analysis	63
3.2.2	Overview of Pathways	63
3.2.3	From Cosexuality Via Gynodioecy to Dioecy.....	65
3.2.4	From Monoecy Via Paradioecy to Dioecy.....	69
3.2.5	From Cosexuality Via Androdioecy to Dioecy.....	70
3.2.6	From Heterostyly to Dioecy	72
3.2.7	From Duodichogamy or Heterodichogamy to Dioecy	73
3.2.8	The Evolution of Trioecy	74
3.3	Maintenance of Gender Dimorphism in Natural Populations.....	75
3.3.1	Sex Ratios	75
3.3.2	Evidence for an Outcrossing Advantage: Rates of Selfing and Levels of Inbreeding Depression.....	77
3.3.3	Relative Seed Fecundity of the Two Sexes.....	79
3.3.4	Relative Pollen Fecundity of the Two Sexes.....	81
3.3.5	Case Studies: Tests of Theoretical Models	81
3.3.5.1	Female Frequency and Habitat in <i>Plantago lanceolata</i>	85
3.3.5.2	Plant Vigour, Fruit Production and the Sex Ratio in <i>Hebe strictissima</i>	85
3.3.5.3	Rates of Selfing, Inbreeding Depression and the Sex Ratio.....	86
3.3.5.4	The Breakdown of Outcrossing Mechanism in <i>Aralia</i>	87
3.4	Directions for Future Research	87
3.4.1	Testable Predictions from Ecological Correlations.....	87
3.4.2	Other Research Gaps.....	88
3.5	Conclusions.....	89
	References.....	90

4 Theories of the Evolution of Sexual Dimorphism

Monica A. Geber	97
4.1 Introduction	97
4.2 Models of Sexual Dimorphism	99
4.2.1 Types of Models	99
4.2.2 General Features	100
4.2.3 Sexual Dimorphism in a Dioecious Organism	102
4.2.3.1 Genetic Models	102
4.2.3.2 ESS Models	104
4.2.4 The Evolution of Gender and Sexual Dimorphism	104
4.2.4.1 ESS Models	104
4.2.4.2 Genetic Models	106
4.3 The Biology of Sexual Dimorphism	106
4.3.1 Disruptive Selection on Homologous Characters	106
4.3.1.1 Biological Circumstances	106
4.3.1.2 Theory on Disruptive Selection in Dioecious Organisms	107
4.3.1.3 Theory on the Evolution of Gender and Sexual Dimorphism	108
4.3.1.4 Disruptive Selection and Sexual Dimorphism in Plants	110
4.3.2 Ecological Competition	111
4.3.2.1 Biological Circumstances	111
4.3.2.2 Theory on Character Displacement Due to Intraspecific Competition	111
4.3.2.3 Competitive Character Displacement and SSS in Dioecious Plants	113
4.3.3 Intersexual Selection	114
4.3.3.1 Biological Circumstances	114
4.3.3.2 Theory on Intersexual Selection	114
4.3.3.3 Mate Choice and Sexual Dimorphism in Plants	115
4.4 Conclusions	116
References	118

5 Sexual Dimorphism in Flowers and Inflorescences

Vincent M. Eckhart	123
5.1 Introduction	123
5.2 Patterns	124
5.2.1 Perianth Size	124
5.2.2 Perianth Shape	126
5.2.3 Nectar	126
5.2.4 Vestigial Characters	127
5.2.5 Other Flower Characters	128
5.2.6 Multi-Flower Characters	130
5.2.7 Questions	130
5.3 Evolutionary Hypotheses	131
5.3.1 Sexual Selection and Character Exaggeration	131

5.3.2	Specific Tests, Hypotheses, and Uncertainties	132
5.3.2.1	Perianth Size.....	132
5.3.2.2	Perianth Shape	134
5.3.2.3	Nectar.....	135
5.3.2.4	Vestigial Character	136
5.3.2.5	Other Flower Characters: Longevity.....	136
5.3.2.6	Multi-Flower Characters.....	136
5.4	Conclusions	138
5.4.1	Towards Quantitative Understanding	138
5.4.2	Size-Number Trade-Offs	139
5.4.3	Costs of Exaggeration	140
5.4.4	Variation in Costs and Benefits.....	140
5.4.5	Macroevolution.....	141
	References	142
6	Sexual Dimorphism in Live History	
	Lynda F. Delph	149
6.1	Introduction.....	149
6.2	Predictions Based on Sex-Differential Reproductive Investment	150
6.3	Patterns of Sexual Dimorphism in Life-History Traits.....	151
6.3.1	Response to Stress	158
6.3.2	Case Studies of Two Species in which the Cost of Reproduction Is Higher for Females	159
6.4	Factors Offsetting Between-Sex Differences in the Cost of Reproduction.....	162
6.4.1	Sexual Dimorphism in the Timing of Investment in Reproduction Versus Growth Within a Season	162
6.4.2	Sexual Dimorphism in the Timing of Flowering Within a Season	163
6.4.3	Sexual Dimorphism in the Frequency of Flowering.....	164
6.4.4	Sexual Dimorphism in Age of Maturation.....	164
6.4.5	Sexual Dimorphism in Physiological Traits.....	165
6.4.6	Sex-Differential Herbivory	165
6.5	The Contrary Case of <i>Silene latifolia</i>	166
6.6	Conclusions	167
	References	169
7	Dimorphism in Physiology and Morphology	
	Todd E. Dawson and Monica A. Geber	175
7.1	Introduction.....	175
7.1.1	Causes of Sexual Dimorphism in Physiology and Vegetative Morphology.....	176
7.1.2	Physiological and Morphological Responses to Natural Selection	177

7.1.3	Physiological and Morphological Responses to Sexual Selection.....	179
7.1.4	Functional Significance of Dimorphism in Physiology and Morphology	180
7.2	History of Studies on Sexual Dimorphism in Plants	180
7.3	Sexual Dimorphism in Plant Form and Function in Species with SSS	182
7.3.1	<i>Salix</i> (Willow; Salicaceae).....	182
7.3.2	<i>Acer negundo</i> (Boxelder; Aceraceae)	187
7.3.3	<i>Simmondsia chinensis</i> (Jojoba/Goat Nut; Buxaceae)	193
7.3.4	<i>Phoradendron juniperinum</i> (Mistletoe; Viscaceae)	195
7.3.5	Other Species	198
7.4	Sexual Dimorphism in Plant Form and Function in Species Without SSS.....	199
7.4.1	<i>Silene latifolia</i> (White Campion; Caryophyllaceae).....	199
7.4.2	<i>Leucadendron</i> (Proteaceae)	204
7.4.3	Other Species	206
7.4.3.1	Agricultural and Weedy Species.....	206
7.4.3.2	<i>Populus</i> (Aspen; Salicaceae).....	206
7.5	Conclusions and Future Directions	207
	References	210

8 Sexual Dimorphism and Biotic Interactions

	Jon Ågren, Kjell Danell, Thomas Elmqvist, Lars Ericson, and Joakim Hjältén.....	217
8.1	Introduction.....	217
8.1.1	Reproductive Allocation and Biotic Interactions	217
8.2	Sexual Differences in Competitive Ability	220
8.3	Sexual Differences in Herbivory	221
8.3.1	Herbivore Preference.....	221
8.3.2	Correlates of Sexual Differences in Herbivore Damage	228
8.3.3	Herbivore Performance on Male and Female Hosts	232
8.3.4	Sexual Differences in Response to Herbivory.....	232
8.4	Sexual Differences in Parasitism.....	233
8.4.1	Foliar Pathogens	233
8.4.2	Flower-Infecting Pathogens.....	234
8.4.3	Nonfungal Parasites	236
8.5	General Discussion.....	237
8.5.1	Biotic Interactions and Biased Sex Ratios.....	237
8.5.2	Evolution of Sexual Differences in Herbivory	239
8.5.3	Future Studies	240
	References	240

9 Genetics of Gender Dimorphism in Higher Plants	
Sarah R. Grant	247
9.1 Introduction	247
9.2 Monoecious Plants	248
9.2.1 Gender Dimorphism in Cucumber	248
9.2.2 Molecular Biology of Gender Dimorphism in Maize	251
9.2.2.1 <i>Tasselseed2</i>	251
9.2.2.2 Gibberellin and gender dimorphism in maize	253
9.2.2.3 The <i>Anther ear1</i> gene	254
9.3 Multigenic gender determination systems in dioecious plants	254
9.3.1 <i>Mercurialis annua</i>	255
9.3.2 A single gender determination locus	256
9.3.3 Sex chromosomes	257
9.3.3.1 Morphologically distinct sex chromosomes	258
9.3.3.2 Structure of sex chromosomes in plants	259
9.3.3.3 X/autosome balance can regulate gender dimorphism	260
9.3.3.4 X/autosome balance in <i>Drosophila melanogaster</i>	261
9.3.4 Comparison of Active Y Sex Chromosomes in Plants and Animals	262
9.3.4.1 The active-Y gender determination of white campion	262
9.3.4.2 The mammalian active-Y gender determination mechanism	263
9.3.4.3 Does dosage compensation occur in white campion?	264
9.3.5 Evolution of the active-Y chromosome: Male sterility	265
9.3.5.1 Cytoplasmic male sterility	265
9.3.5.2 Suppression of carpel or pistil development	265
9.4 Expression of MADS-box genes in unisexual flowers	267
9.5 Conclusions	269
References	270
10 Quantitative Genetics of Sexual Dimorphism	
Thomas R. Meagher	275
10.1 Introduction	275
10.2 Quantitative Genetic Models of Sexual Dimorphism	277
10.3 Integration of Quantitative Genetics with Sexual Selection	279
10.4 Correlated Evolution and Divergence of Male and Female Traits in Dioecious Plants	279
10.5 Correlated Evolution and Divergence of Male and Female Function in Hermaphroditic Plants	288
10.6 Conclusions	289
