

Table of Contents

1	Designing Transition Metal Complexes for Molecular Recognition in Synthetic Transformations <i>B.M. Trost</i>	1
2	REDOR NMR of Biological Solids: From Protein Binding Sites to Bacterial Cell Walls <i>J. Schaefer</i>	25
3	Molecular and Dendritic Receptors for Small Biomolecules <i>F. Diederich</i>	53
4	Molecular Recognition of DNA by Ecteinascidin 743 <i>B.M. Moore II, F.C. Seaman, and L.H. Hurley</i>	81
5	New Tools for Drug Design Based on Protein Ligand Recognition Principles <i>G. Klebe</i>	97
6	Sequence-Specific Recognition of DNA and Control of Gene Expression by Oligonucleotide-Intercalator Conjugates <i>C. Hélène, C. Giovannangeli, J.-S. Sun, and T. Garestier</i> . .	119
7	Combinatorial Nucleic Acid Libraries: The New World of Aptamers and Ribozymes <i>M. Famulok</i>	135

8	Sequence Specific Recognition of Double Stranded DNA by Peptide Nucleic Acid <i>P.E. Nielsen</i>	151
9	Solid Phase Libraries of Glycopeptide Templates in the Study of Complex Oligosaccharide-Receptor Interactions <i>M. Meldal, P.M. StHilaire, and K. Bock</i>	169
10	The Molecular Recognition of Saccharides and Glycoprotein-Inspired Materials <i>L.L. Kiessling</i>	183
11	Self-Organized Autocatalytic Chemical Networks and Molecular Ecosystems: Do They Provide the Experimental Tools for Modeling the Transition from Inanimate to Animate Chemistry? <i>M.R. Ghadiri</i>	213
	Subject Index	239
	Previous Volumes Published in this Series	245
