1 Liquid Water at Low Temperature: Clues for Biology?	1
<i>E. Eugene Stanley</i>	1
1.1 Introduction	1
1.2 What is the Puzzle of Liquid Water?	2
1.2.1 Volume Fluctuations.....	2
1.2.2 Entropy Fluctuations.....	3
1.2.3 Volume-Entropy Cross-Correlations.....	3
1.3 Why Do We Care About Liquid Water?	4
1.4 Clues for Understanding Water	5
1.5 Qualitative Picture: Locally Structured Transient Gel	5
1.5.1 'Locally Structured'.....	5
1.5.2 'Transient Gel'.....	6
1.6 Microscopic Structure: Local Heterogeneities	6
1.7 Liquid-Liquid Phase Transition Hypothesis	8
1.8 Plausibility Arguments	9
1.9 Tests of the Hypothesis: Computer Water	11
1.9.1 Does $1/K_T^{\max}$ Extrapolate to Zero at (T_c, P_c) ?.....	11
1.9.2 Is There a 'Kink' in the $P\rho$ Isotherms?.....	11
1.9.3 Is There a Unique Structure of the Liquid near the Kink?.....	12
1.9.4 Does the Coordination Number Approach Four as C is Approached?.....	12
1.9.5 Is It Possible that Two Apparent 'Kink' Coexist Below C^* ?.....	12
1.9.6 Do Fluctuations Appear at All Time Scales?.....	13
1.9.7 Is There 'Critical Slowing Down' of a Characteristic Time Scale?.....	13
1.9.8 Is the Characteristic Dynamics of Each 'Phase' Different?.....	14
1.9.9 Is There Evidence for a HDL-LDL Critical Point from Independent Simulations?.....	14
1.10 Tests of the Hypothesis: Real Water	15
1.10.1 A Cautionary Remark.....	15
1.10.2 Previous Work.....	15
1.10.3 Recent Work.....	16
1.11 Discussion	18
1.12 Outlook	19
References	20

2 *Ab Initio* Theoretical Study of Water: Extension to Extreme Conditions

Fumio Hirata and Hirofumi Sato.....25

2.1	Introduction	25
2.2	Liquid Structure, Electronic and Thermodynamic Properties of Water	26
2.2.1	<i>Ab Initio</i> Polarizable Model of Water	28
2.2.2	Electronic Polarization and Energetics	28
2.2.3	Solvation Structure of Liquid Water	31
2.2.4	Hydrogen Bonding in Liquid Water	34
2.3	Theoretical Prediction of pK_w	37
2.3.1	Description of the Auto-ionization Process in Water	38
2.3.2	Solvation Structure of H_2O , H_3O^+ , and OH^-	39
2.3.3	Free Energy, Its Components and pK_w	43
2.4	Conclusions	50
2.4.1	Electronic and Liquid Structure of Water	50
2.4.2	The State Dependence of pK_w	51
	References	52

3 The Behavior of Proteins Under Extreme Conditions:

Physical Concepts and Experimental Approaches

<i>Karel Heremans and László Smeller</i>		53
3.1	Introduction	53
3.2	Physical Concepts	54
3.2.1	Volume and Hydration	54
3.2.2	Compressibility and Volume Fluctuations	55
3.2.3	Thermal Expansion and Volume-Entropy Fluctuations	56
3.2.4	Heat Capacity and Entropy Fluctuations	56
3.2.5	Grüneisen Parameter	57
3.2.6	Protein Stability and Unfolding	57
3.2.7	Glass Transitions	60
3.3	Experimental Approaches	60
3.3.1	Thermodynamic Properties	61
3.3.2	Absorption Spectroscopy	62
3.3.3	Emission Spectroscopy	66
3.3.4	NMR Spectroscopy	68
3.3.5	Diffraction and Scattering Techniques	69
3.3.6	High-Pressure Computer Simulations	69
3.4	Conclusions: Facts and Hypotheses	70
	References	71

4 High-Pressure NMR Spectroscopy of Proteins

<i>Lance Ballard and Jiri Jonas</i>		75
4.1	Introduction	75
4.2	Experimental Methods	77
4.2.1	Survey of High-Pressure NMR Techniques	77
4.2.2	Instrumentation for the Autoclave Approach	79
4.3	Model Proteins	86

4.3.1	Ribonuclease A	87
4.3.2	Hen Lysozyme	88
4.3.3	Apomyoglobin	88
4.3.4	<i>Arc</i> Repressor	89
4.4	Results and Discussion	89
4.4.1	Determination of the Activation Volume of the Uncatalyzed Hydrogen Exchange Reaction Between N-Methylacetamide and Water	89
4.4.2	Cold, Heat, and Pressure Unfolding of Ribonuclease A	91
4.4.3	Pressure-Assisted, Cold-Denatured Lysozyme Structure and Comparison with Lysozyme Folding Intermediates	92
4.4.4	Denaturation of Apomyoglobin Mutants by High Pressure	95
4.4.5	High-Pressure NMR Study of the Dissociation of the <i>Arc</i> Repressor	96
4.5	Conclusions	97
	References	97

5 Pressure-Induced Secondary Structure Changes of Proteins Studied by FTIR Spectroscopy

	<i>Yoshihiro Taniguchi and Naohiro Takeda</i>	101
5.1	Introduction	101
5.2	Experimental Methods	103
5.2.1	Sample and Solutions	103
5.2.2	Deuterated Solutions	103
5.2.3	High-Pressure FTIR Measurements	103
5.3	Results and Discussion	104
5.3.1	Ribonuclease A	104
5.3.2	Ribonuclease S	109
5.3.3	Bovine Pancreatic Trypsin Inhibitor	113
5.4	Conclusions	117
	References	118

6 The Small Angle X-Ray Scattering from Proteins Under Pressure

	<i>Tetsuro Fujisawa and Minoru Kato</i>	121
6.1	Introduction	121
6.1.1	Protein Folding Under Pressure Related to SAXS	122
6.1.2	Information Available from SAXS	122
6.2	Experimental Methods	124
6.2.1	High-Pressure Cell for SAXS	124
6.2.2	Absorption of X-Rays	125
6.2.3	Contrast Effect by Pressure	126
6.2.4	High-Pressure SAXS Experiments at a Synchrotron Facility	126
6.2.5	Data Analysis of SAXS Profiles	127
6.3	Results and Discussion	128
6.3.1	Pressure Denaturation of Metmyoglobin	128
6.3.2	Pressure Dissociation of LDH	130
6.4	Conclusion and Future Prospects	136
	References	137

7 Accurate Calculations of Relative Melting Temperatures of Mutant Proteins by Molecular Dynamics/Free Energy Perturbation Methods	
<i>Minoru Saito</i>	139
7.1 Introduction	139
7.2 Molecular Dynamics Simulation of Proteins	142
7.3 Equilibrium Structure and Thermal Fluctuation	146
7.4 Computational Mutagenesis	149
7.5 Free Energy Perturbation Method	150
7.6 Free Energy Component Analysis	152
7.7 Calculation Results of ΔT_m and $\Delta\Delta G$	152
7.8 Stability Mechanism of Val74Ile RNaseHI Mutant	154
7.9 Stability Mechanism of Ile→Val Lysozyme Mutants	158
7.10 Approximation Level Dependence	159
7.11 Conclusion	161
7.12 Appendix: Relationship Between ΔT_m and $\Delta\Delta G$	162
References	165

8 Enzyme Kinetics: Stopped-Flow Under Extreme Conditions	
<i>Claude Balny</i>	167
8.1 Introduction	167
8.2 Basic Principles	168
8.2.1 Cryo-Baro-Enzymology	168
8.2.2 Exploitation of Data	169
8.3 The High-Pressure, Variable-Temperature, Stopped-Flow Technique (HP-VT-SF)	170
8.3.1 General Design	170
8.3.2 Source of Artifacts in Stopped-Flow Operating Under Extreme Conditions	172
8.3.3 Recent Progress	172
8.4 Examples of Application	173
8.4.1 Steady-State Kinetics of Enzymes of Monomeric or Polymeric Quaternary Structure	174
8.4.2 Structure-Function Relations: Case of Muscle Contraction	176
8.4.3 Micellar Enzymology	176
8.4.4 Transient Enzyme Kinetics	179
8.4.5 Carbon Monoxide (CO) Binding	180
8.4.6 Electron-Transfer Reactions	180
8.5 Conclusions	183
References	184

9 Pressure Effects on the Intramolecular Electron Transfer Reactions in Hemoproteins	
<i>Yoshiaki Furukawa, Yoichi Sugiyama, Satoshi Takahashi, Koichiro Ishimori, and Isao Morishima</i>	187
9.1 Introduction	187

9.2	Materials and Methods	189
9.2.1	Preparation of the Ruthenium-modified Proteins	189
9.2.2	Measurements of Flash Photolysis Under High Pressure	191
9.3	Results	191
9.3.1	Electron Transfer in Ruthenium-Modified Cytochrome b_5	191
9.3.2	Electron Transfer in Ruthenium-Modified, Zinc-Substituted Myoglobins	194
9.4	Discussion	197
9.4.1	Factors Regulating the Electron Transfer Reaction and Their Pressure Dependence	197
9.4.2	The Pathway for Electron Transfer in Ruthenium-Modified Cytochrome b_5	198
9.4.3	The Pathway for Electron Transfer in Ruthenium-Modified, Zinc-Substituted Myoglobin	199

10 Marine Microbiology: Deep Sea Adaptations

Chiaki Kato, Lina Li, Yuichi Nogi, Kaoru Nakasone, and Douglas H. Bartlett.....205

10.1	Introduction	205
10.2	Isolation and Taxonomy of Deep-Sea Barophilic (Piezophilic) Microorganisms	206
10.2.1	Isolation and Growth Properties	206
10.2.2	Taxonomy	208
10.3	High-Pressure Sensing and Adaptation in Deep-Sea Microorganisms	212
10.3.1	Introduction	212
10.3.2	Pressure Regulation in Microorganisms Outside of the Genus <i>Shewanella</i>	213
10.3.3	Pressure-Regulated Operons in <i>Shewanella</i> Species	214
10.3.4	Pressure-Sensing Mechanisms	216
10.4	Concluding Remarks	217
	References	219

11 Submarine Hydrothermal Vents as Possible Sites of the Origin of Life

Kensei Kobayashi and Hiroshi Yanagawa.....221

11.1	Introduction	221
11.2	Abiotic Formation of Bioorganic Compounds in Planetary Atmospheres	222
11.3	Abiotic Formation of Bioorganic Compounds in Space	224
11.4	The Primeval Ocean as a Cradle of Life on Earth	225
11.5	Implication of the Present Hydrothermal Systems for the Condition of the Primeval Ocean	226
11.5.1	Heat Energy and Quenching	227
11.5.2	Reducing Environments	228
11.5.3	High Concentration of Trace Metal Ions	228
11.6	Experiments in Simulated Hydrothermal Vent Environments	229
11.6.1	Synthesis of Amino Acids	229
11.6.2	Stability of Amino Acids in Vent Environments	231
11.6.3	Formation of Microspheres and Oligomers	233

11.7 Conclusion.....	235
