Subject	Page
Microbial Genetics	1
Introduction	1
Microbes and Human Disease	1
Bacterial Genetics	2
Structure and Function of the Genetic Material	2
Genotype and Phenotype	4
DNA and Chromosomes	4
Gene nemes	4
Multiple choices in Structure and Function of the Genetic Material	6
True and False in Structure and Function of the Genetic Material	7
DNA Replication	9
Multiple choices in DNA Replication	12
Gene Expression:	14
RNA and Protein Synthesis	14
Transcription	14
Translation	16
Regulation of Bacterial Gene Expression	22
Multiple choices in Gene Expression	24
True and False in Gene Expression	28
Mutation	31
Types of Mutations	31
Mutagens	33
Frequency of Mutation	35
Identifying Mutants	36
Identifying Chemical Carcinogens	37
Short Answers in Mutation	38
True and False in Mutation	47
Plasmids and Transposons	50
Plasmids	50
Types of Plasmids and Their Biological Function	52
True and False in plasmids	

Genetic Transfer and Recombination	56
Transformation in Bacteria	58
Conjugation in Bacteria	61
Transduction in Bacteria	65
Multiple Choices in Genetic Transfer and Recombination	66
True and False in Genetic Transfer and Recombination	67
Gene Mapping in Bacteria	70
Genetic Mapping in Bacteria by Interrupted Conjugation	70
High-Resolution Mapping by Recombinant Frequency	76
F Factors Carrying Bacterial Genes	78
Genetic Mapping in Bacteria by Transformation	80
Genetic Mapping in Bacteria by Transduction	83
Bacteriophages: An Introduction	83
Transduction Mapping of Bacterial Chromosomes	85
Generalized Transduction	85
Specialized Transduction	87
Short Answers in Gene Mapping in Bacteria	90
Viral Genetics	99
Mapping Genes of Bacteriophages	100
True and False in Viral Genetics	102
Fungal Genetics	104
Genome Structure	104
<i>Neurospora</i> Classical Genetics	105
Using <i>Neurospora</i> for tetrad analysis	106
Centromere mapping	107
First division segregation	107
Second division segregation	108
Key Answer	113
References	114
