

Table of Contents

1 Introduction	1
TIMM ANKE	
2 Traditional Products	3
2.1 Traditional Fermented Food	3
GUDRUN WOLF	
1 Introduction	3
2 Mold-Ripened Foods of Animal Origin	4
2.1 Meat Products	4
2.1.1 Spontaneous Growing Molds	4
2.1.2 The Effect of Mold Growth on Fermented Meat Products	4
2.1.3 Starter Cultures	5
2.2 Cheeses	6
2.2.1 Blue Cheeses	6
2.2.2 Camembert Cheese	6
2.2.3 Secondary Metabolites	7
3 Fermented Foods of Plant Origin	7
3.1 Koji	7
3.2 Soy Sauce	8
3.2.1 Koji Stage	8
3.2.2 Moromi Stage	9
3.2.3 Modern Methods of Soy Sauce Production	9
3.2.4 Genetic Modification of Koji Molds	9
3.3 Miso	10
3.4 Tempe	10
3.5 Oncom	10
3.6 Sufu	10
4 Conclusions	11
2.2 Edible Mushrooms	14
FRANTISEK ZADRAZIL AND DEVKI NADAN KAMRA	
1 Introduction	14
2 Mushroom Cultivation	15
2.1 Process of Cultivation	15
2.1.1 Preservation of Fungal Cultures and Preparation of Inoculum (Spawn)	15
2.1.2 Substrate Pretreatment and Inoculation	17

2.1.3	Substrate Colonization – Mycelial Growth	17
2.1.4	Initiation and Formation of Fruit Bodies	18
2.1.5	Harvest and Post Harvest Management	19
2.2	Cultivation of Primary Rot Fungi	19
2.2.1	Extensive Cultivation on Tree Logs	19
2.2.2	Cultivation on Particulate Substrates	20
2.3	Cultivation of Secondary Rot Fungi	21
2.4	Cultivation of Mycorrhizal (Symbiotic) Fungi	23
3	Allergies Caused by Spores of Edible Fungi	23
4	Mushroom Cultivation and Environmental Protection	23
3	Biological Control	27
3.1	Fungal Insecticides	27
	OLGA MALSAM ET AL.	
1	Introduction	27
2	Mode of Action of Entomopathogenic Fungi	27
2.1	Life Cycle and Infection Process	27
2.2	Defense Mechanisms in the Host	28
3	Commercial Uses of Entomopathogenic Fungi	28
3.1	Large-Scale Production	28
3.1.1	Liquid Fermentation	29
3.1.2	Solid State Fermentation	29
3.2	Formulation of Entomopathogenic Fungi	29
3.3	Application	30
3.4	Registration	30
4	Examples for Research Projects and Products	31
4.1	<i>Metarhizium anisopliae</i>	31
4.2	<i>Metarhizium flavoviride</i>	32
4.3	<i>Verticillium lecanii</i>	32
4.4	<i>Beauveria spp.</i>	32
4.5	Commercial Bioinsecticides Based on Entomopathogenic Fungi	33
5	Outlook	34
3.2	Nematodes	38
	HANS-BÖRJE JANSSON ET AL.	
1	Introduction	38
2	Nematodes and Their Fungal Antagonists	38
2.1	Nematodes	38
2.2	Nematophagous Fungi	39
3	Growth and Differentiation of Nematophagous Fungi	40
3.1	Growth and Development of Nematode-Trapping Fungi	40

3.2	Growth and Development of Endoparasitic Fungi	40
3.3	Formulation and Delivery Systems	41
4	Screening for New Strains	41
5	Toxins and Antibiotics	42
6	Hydrolytic Enzymes	44
6.1	Proteases	44
6.2	Chitinases	46
7	Impact of Molecular Biology and Biotechnology on Biological Control of Nematodes	46
3.3	Biological Herbicides – Mycoherbicides	51
	MICHAEL KILIAN ET AL.	
1	Introduction	51
2	Classical Strategy	51
3	Herbicide Strategy	51
4	Mechanisms of Action	51
5	Production	52
6	Formulation	52
7	Economic Importance of Fungi as Biological Herbicides	53
7.1	Examples of Commercial Products	53
7.2	Additional Research Projects and Products	54
3.4	Fungi	65
	ILAN CHET AND JACOB INBAR	
1	Introduction	65
2	Biological Control of Foliar Diseases	65
3	Biological Control of Post-Harvest Diseases	67
4	Biological Control of Soil-Borne Diseases	67
4.1	<i>Coniothyrium Minitans</i>	68
4.2	<i>Gliocladium spp.</i>	68
4.3	<i>Trichoderma spp.</i>	68
5	Mechanisms Involved in Biological Control by Fungi	71
5.1	Antibiosis	71
5.2	Competition	71
5.3	Mycoparasitism	71
6	Cellular and Molecular Aspects of <i>Trichoderma</i> Interactions	72
7	Concluding Remarks	75

4	Vitamins, Amino Acids	81
	K.-PETER STAHMANN	
1	Introduction	81
2	Vitamins	81
2.1	Riboflavin (Vitamin B ₂)	81
2.2	Carotenoids (β -Carotene, Provitamin A; Zeaxanthin, Astaxanthin)	82
2.3	Polyunsaturated Fatty Acids (Vitamin F Group)	83
2.4	Pyridoxine (Vitamin B ₆)	83
2.5	Thiamine (Vitamin B ₁)	83
2.6	Biotin (Vitamin H, B ₈)	83
2.7	Ergosterol (Provitamin D ₂)	84
2.8	Pantothenic Acid (Vitamin B ₅)	84
2.9	Cyanocobalamin (Vitamin B ₁₂)	84
2.10	L-Ascorbic Acid (Vitamin C)	84
3	Amino Acids	85
3.1	L-Glutamic Acid	85
3.2	L-Methionine	85
3.3	L-Lysine	85
3.4	L-Threonine	85
3.5	L-Phenylalanine	86
3.6	L-Tryptophan	86
4	Future Perspectives	86
5	Antibiotics	91
5.1	β-Lactams	91
	JUAN F. MARTIN ET AL.	
1	Introduction	91
2	Enzymes of the Biosynthetic Pathway	91
2.1	The Common Pathway Leading to Isopenicillin N	91
2.2	The Hydrophobic Branch	95
2.3	The Hydrophilic Branch	97
3	Biosynthetic Genes	98
3.1	Genes Common to All Penicillin and Cephalosporin Producers (<i>pcb</i>)	98
3.2	Genes Specific for the Penicillin Pathway (<i>pen</i>)	101
3.3	Mutants Impaired in Penicillin Biosynthesis	105
3.4	Molecular Karyotypes of <i>Aspergillus nidulans</i> , <i>Penicillium chrysogenum</i> and <i>Penicillium notatum</i>	105
3.5	Specific Genes for the Biosynthesis of Cephalosporins (<i>cef</i>)	106
3.6	Origin of the β -lactam Biosynthetic Genes	108
4	Regulation of Biosynthesis	109
4.1	Carbon Source Regulation	110
4.2	Nitrogen Source Regulation	113

4.3	Phosphorus Source Regulation	113
4.4	Regulation by Methionine	114
4.5	Regulation by Lysine	115
4.6	Regulation by Glutamate and Glutamine	116
4.7	Regulation by Enzyme Induction	117
4.8	Regulation by pH	117
4.9	Growth Rate Regulation	117
4.10	Regulation by Oxygen	117
5.2	Fusidic Acid, Griseofulvin and Pleuromutilin	128
	GERHARD ERKEL	
1	Fusidic Acid	128
2	Griseofulvin	130
3	Pleuromutilin (Tiamulin)	132
6	Pharmacologically Active Products	137
6.1	Mechanism of Action of Cyclosporin	137
	MAX H. SCHREIER	
1	Introduction	137
2	T Cell Activation by the Ca^{++} -dependent Signaling through the T Cell Receptor	138
3	The Immunophilin-Ligand-Calcineurin-Calmodulin Complex	138
4	Calcineurin and the Activation of the IL2 Transcription Complex	141
5	Ca^{++} -independent IL-2 Induction	141
6	Other Biological Effects of CsA	142
7	Concluding Remarks	143
6.2	Biosynthesis of Cyclosporins and Related Peptides	147
	HORST KLEINKAUF AND HANS VON DÖHREN	
1	Introduction	147
2	Cyclosporin Producers	147
3	The Cyclosporin Biosynthetic System	148
3.1	Fermentation Improvement	148
3.2	Molecular Genetic Approaches	148
3.3	Precursor Levels	149
3.4	Alanine Racemase	150
3.5	Bmt Formation	151
3.6	Cyclosporin Synthetase	151
3.6.1	Characterization of the Multi-Enzyme	151
3.6.2	Correlation of Gene and Enzyme Structures	152

3.6.3	<i>In vivo</i> and <i>in vitro</i> Formation of Cyclosporin Analogs	155
4	Perspectives	157
6.3	Mevinic Acids	162
	AKIRA ENDO AND KEIJI HASUMI	
1	Introduction	162
2	HMG-CoA Reductase	163
3	Isolation	163
4	Biosynthesis	166
5	Modification	167
6	Biological Activities	167
7	Other Inhibitors of Sterol Biosynthesis	168
6.4	Claviceps Alkaloids	173
	MICHAEL LOHMEYER AND PAUL TUDZYNSKI	
1	Introduction	173
2	Chemistry of Ergot Alkaloids	174
3	Pharmacology	175
4	Primary Metabolism	175
5	Secondary Metabolism	177
6	Large-Scale Production	178
7	Immobilized Cells	179
8	Physiology and Regulation of Ergot Alkaloid Production	181
9	Genetics	182
6.5	Zearalenone and Zeranone	186
	HEIDRUN ANKE	
1	Introduction	186
2	Structures	186
3	Producing Organisms and Occurrence	187
4	Biosynthesis	188
5	Transformation of Zearalenone by Microorganisms, Animals, and Mammalian Cell Cultures	188
6	Analysis	188
7	Biological Activities	188

7 Agrochemicals	193
7.1 Gibberellins	193
WILHELM RADEMACHER	
1 Introduction	193
2 GA-Producing Microorganisms	194
2.1 <i>Gibberella fujikuroi</i>	194
2.2 <i>Sphaceloma spp.</i>	195
2.3 <i>Neurospora crassa</i>	195
2.4 <i>Phaeosphaeria sp.</i>	195
2.5 <i>Rhizobium phaseoli</i>	196
2.6 <i>Azospirillum lipoferum</i> and <i>A. brasilense</i>	196
2.7 Occurrence of GAs in Further Microorganisms	196
2.8 Functions of GAs Produced by Microorganisms	197
3 Metabolism of GAs in Microorganisms	197
3.1 <i>Gibberella fujikuroi</i>	197
3.2 <i>Sphaceloma spp.</i>	199
3.3 <i>Phaeosphaeria sp.</i>	199
3.4 Other Microorganisms	199
4 Regulation of GA Formation	201
4.1 Effects of Components of the Medium	201
4.2 Effects of Plant Growth Retardants	201
5 Outlook	202
7.2 Strobilurins	206
TIMM ANKE	
1 Introduction	206
2 Discovery, Producing Fungi	206
3 Biological Activities, Mode of Action	207
4 Structural Requirements for the Antifungal Activities	210
5 The Strobilurins and Oudemansins – Lead Structures for the Syntheses of Agricultural Fungicides	210
8 The Ligninolytic System of Fungi	213
MARION HEINZKILL AND KURT MESSNER	
1 Introduction	213
2 Ligninolytic Enzymes	213
2.1 Laccases	213
2.2 Lignin Peroxidases	216
2.3 Manganese Peroxidases	217

2.4	Other Peroxidases	218
2.5	H ₂ O ₂ -Producing Oxidases	218
3	Regulation of Enzyme Production	218
4	Localization of Ligninolytic Enzymes during Wood Decay	219
5	Physiological Role of Laccases and Peroxidases	221
6	Potential Applications of Ligninolytic Fungi and their Enzymes	222
9	Fungal Genetics: Novel Techniques and Regulatory Circuits	229
	PAUL TUDZYNSKI AND BETTINA TUDZYNSKI	
1	Introduction	229
2	Impact of Molecular Techniques on Fungal Genetics	231
2.1	Analysis of Molecular Diversity	231
2.2	Genetic Maps	232
2.3	Transformation	233
2.4	Gene Cloning	235
3	Regulatory Circuits	238
3.1	Glucose Repression in Fungi	238
3.2	Nitrogen Catabolite Repression	239
3.3	pH Regulation	241
3.4	Phosphorus Regulation	241
3.5	Sulfur Regulation	242
3.6	Biotechnological Interest in Molecular Mechanisms of Gene Regulation	243
10	Heterologous Gene Expression in Filamentous Fungi	251
	GABOR JARI	
1	Introduction	251
2	General Fungal Techniques	251
2.1	Transformation	251
2.2	Host Organisms	253
2.3	Expression Vectors	254
3	Improving Expression Levels	254
3.1	Transcription	254
3.2	Post-Transcriptional Events	256
3.2.1	Secretion	256
3.2.2	Proteolysis	258
3.3	Regulation of Protease Gene Expression	260
4	Summary and Perspectives	261

11 Mycotoxins and Their Prevention	265
JOAN W. BENNETT AND NANCY P. KELLER	
1 Introduction	265
2 Major Classes of Mycotoxins	265
3 Health Impact of Mycotoxins	267
4 Economic Impact of Mycotoxins	267
5 Methodology	268
6 Prevention	269
7 Molecular Biology	269
8 Implementation of Molecular Strategies for Aflatoxin and Sterigmatocystin Control	270
9 Summary	271
12 Fungi in Bioremediation	275
STEFAN KREMER AND HEIDRUN ANKE	
1 Introduction	275
2 General Metabolization Strategies in Fungi	275
3 Metabolism of Aliphatic Hydrocarbons	277
4 Metabolism of Aromatic Hydrocarbons	279
5 Metabolism of Halogenated Aromatic Compounds	281
6 Metabolism of Polycyclic Aromatic Hydrocarbons	283
7 Bioremediation Technologies	289
13 Biotransformations	297
KLAUS KIESLICH	
1 Introduction	297
2 Reactions and Processes	298
2.1 Oxidations	298
2.1.1 Hydroxylation of Saturated Positions	298
2.1.2 Hydroxylation of Arenes	304
2.1.3 Epoxidation	305
2.1.4 Oxidations of Alcohols and Ketones	305
2.1.5 Dehydrogenation of C-C Bonds	305
2.1.6 Oxidation of Nitrogen and Sulfur Groups	306
2.1.7 Baeyer-Villiger Oxidation	307
2.1.8 Partial Oxidative Degradation	308

2.2	Reductions	310
2.2.1	Reduction of Monoketones	310
2.2.2	Reduction of Diketo Substrates	311
2.2.3	Reduction of Aldehydes	314
2.2.4	Reduction of Carboxylic Acids	314
2.2.5	Hydrogenation of Double Bonds	315
2.2.6	Reduction of Heteroatoms	316
2.2.7	Further Reductions	317
2.3	Hydrolytic Reactions	318
2.3.1	Hydrolysis of Esters	318
2.3.2	Hydrolysis of C-N Bonds	320
2.3.3	Addition of Water to C=C Bonds	321
2.3.4	Hydrolysis of Epoxides	322
2.3.5	Hydrolysis of Ethers and Glycosides	323
2.4	Condensations and Additions	323
2.4.1	Formation of Esters, Lactones and Amide Bonds	323
2.4.2	Acyloin Condensations	323
2.4.3	Glycosidations	325
2.4.4	Addition of Ammonia to C=C Double Bonds	325
2.4.5	Various Coupling Reactions	325
3	Appendix: Fungi Used for Transformations	327
3.1	Ascomycotina	328
3.1.1	Euscomycetes	328
3.1.2	Hemiascomycetes	331
3.2	Basidiomycotina	338
3.2.1	Gasteromyces	338
3.2.2	Hymenomyces	338
3.2.3	Uredinomyces	340
3.2.4	Ustilaginomyces	340
3.3	Deuteromycotina	340
3.3.1	Agonomycetes	340
3.3.2	Coelomyces	341
3.3.3	Hyphomyces	342
3.4	Mastigomytina	361
3.4.1	Chytridiomyces	361
3.4.2	Hyphochytriomyces	361
3.4.3	Oomycetes	361
3.5	Zygomycotina	362
3.5.1	Trichomyces	362
3.5.2	Zygomycetes	362
Subject Index		401
